Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, May 12, 1860.

Atlantic and Great Western Railroad.

We learn that the construction of this road is proceeding very rapidly. A force some 2,000 men, we are informed, are already at work, and large amounts of materials are going forward to the scene of operations. The company claims to be able to reach the line of the Sunbury and Erie road the coming fall, when a very important connection will be formed, and the Erie company will be virtually at Erie, Penn. The result will be to carry the gauge of that road to that point. Should the proposed connections at Akron be formed, the Erie company will be placed in a position in which nothing will be desired on the score of favorable connections.

Illinois Central Railroad.

The earnings of this road for the past four months of the year were $775,992, against $569,-'919 for the corresponding period of 1859—increase, $206,073; rate of increase, 36 per ct. A similar rate for the year will carry the gross earnings up to nearly $2,900,000, a much larger sum than the road has yet earned. Should this sum be reached, the net earnings will pay the interest on the company's bonds.

Cost of Transportation on Railroads.

One of the most marked features in the internal commerce of the country is the steadily increasing traffic of our railroads, and a corresponding diminution on all our water lines. Perhaps the most striking evidence of this tendency is afforded by the traffic of the Erie and New York Central Railroads and the New York Canals. Notwithstanding the enlargement of the canals, the number of tons moved one mile upon them is about 25 per cent. less than it was seven years ago, while upon the two roads named, the increase, in the aggregate, has been one hundred per cent., as will be seen by the following statement of tons moved one mile on the respective works:

Years.	New York Central Railroad.	New York and Erie Railroad.	New York Canals.
	Tons moved one mile.		
1853	54,701,350	101,626,522	700,389,933
1854	81,168,080	130,808,034	668,559,044
1855	99,605,836	150,673,998	619,170,651
1856	145,733,678	183,458,046	592,009,603
1857	145,873,776	167,100,856	484,750,864
1858	142,691,178	165,895,635	564,842,095
1859	157,136,000	147,127,039	544,309,072

Receipts from transportation of merchandise in the meantime have been as follows:

Years.	New York Central Railroad.	New York and Erie Railroad.	New York Canals.
1853	$1,838,830	$2,537,214	$3,204,718
1854	2,479,820	3,369,590	2,773,566
1855	3,189,603	3,653,002	2,805,077
1856	4,328,041	4,545,782	2,748,212
1857	4,559,276	4,097,610	2,045,641
1858	3,700,270	3,843,311	2,110,754
1859	3,337,148	3,195,870	1,723,945

The receipts for tonnage on the canals include tolls only—the cost of transportation of which just about equals the tolls paid. The receipts on the railroads embrace both the cost of transportation and a return on the capital invested. Since 1853, the aggregate receipts upon the two roads have increased 50 per cent., while the canals have fallen off in equal ratio. This tendency is unquestionably to increase. Already have the railroads taken nearly all the more valuable kinds of freights, leaving to the canal the low priced, which can afford to pay only very low rates of transportation.

The following statement will show the relative charge for transportation on the New York Central and New York and Erie, and New York Canals, for seven years. In the statement, the cost of movement on the canals is estimated to be equal to the tolls charged.

1853.	Tons moved one mile.	Freight and Tolls.	Rate in cents and fractions per mile.
Central Railroad	54,701,350	$1,838,830	3.36
Erie Railroad	101,626,522	2,537,214	2.49
Canals	700,389,933	6,409,436	.91
1854.			
Central Railroad	81,168,080	2,479,820	3.05
Erie Railroad	130,808,034	3,369,590	2.57
Canals	688,559,044	5,547,182	.83
1855.			
Central Railroad	99,605,836	3,189,603	3.20
Erie Railroad	150,673,998	3,653,002	2.42
Canals	619,170,651	5,610,154	.90
1856.			
Central Railroad	145,733,678	4,328,041	2.97
Erie Railroad	183,458,046	4,545,782	2.48
Canals	592,009,603	5,496,424	.84
1857.			
Central Railroad	145,873,786	4,559,276	3.13
Erie Railroad	167,100,850	4,097,610	2.45
Canals	484,750,864	4,091,282	.84
1858.			
Central Railroad	142,691,178	3,700,290	2.66
Erie Railroad	165,895,635	3,843,311	2.32
Canals	564,842,095	4,221,508	.74
1859.			
Central Railroad	157,136,000	3,337,148	2.13
Erie Railroad	147,127,039	3,195,869	2.17
Canals	544,309,072	3,467,890	.63

The above table is valuable to show to the railroad companies upon what their success must depend—not upon high rates, but upon economy in the management of their roads. Upon the average for the future, they cannot expect to receive more than two cents, per ton, per mile. To make money they must, consequently, carry for *one* cent. That they will come to this, we have no doubt. When this is accomplished, they can compete successfully with the canals. Their ability to do so is already proved, and there is no doubt that much greater improvement is to be made in the economies of railways than in those of canals. In one the limit of excellence is already reached; in the other, the field is only just entered upon.

During the seven years the rates on the Central Railroad have been reduced one-third; on the canals in just about the same ratio. On the Erie they are only about one-tenth less than they were seven years ago—a very favorable exhibit for that road.

The rates on the roads on an average are still 3⅓ times greater than on the canals. This fact taken in connection with their increased traffic, as compared with the canals proves their great superiority, in public estimation, for many kinds of freight.

Philadelphia and Reading Railroad.

By an advertisement elsewhere, it will be seen that this company propose to the holders of its mortgage bonds due July 1, 1860, to extend them for a period of twenty years—they retaining the bonds, and the security of the mortgages in the precise condition in which they are now held, and receiving from the company fresh sheets of coupons for the interest, payable semi-annually. These bonds, amounting in the aggregate to $3,308,400, are secured by the first mortgage on the road. The net revenue, as stated, during the last fiscal year, was six times the amount of the interest on these bonds. The holders are also entitled to the benefit of a sinking fund of $140,000 per annum, established by the stockholders in January last. To those who assent to this proposition, a bonus of 10 per cent. will be given, to be paid in cash at the time the extension is effected.

Lest there should be any misapprehension that the plea of usury may at some future day be interposed in proceedings instituted to recover the amounts called for on the face of the bonds, and thus deter holders of the loan from availing themselves of the very liberable terms offered by the company, we annex the act relating thereto, which was passed at the last session of the Pennsylvania Legislature.

Section 1. Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same, That it shall not be lawful for the Philadelphia and Reading Railroad Company, in any case where said Company has paid, or may hereafter pay, any sum to the holders of their bonds issued by lawful authority, and secured by mortgage, to procure an extension of time for the payment thereof, to allege in any proceeding at law or in equity, that such payments were usurious, and such payments shall be held and taken to be lawful and not usurious. Provided that this act shall not apply to any case decided, or to any suit now pending in respect to such bonds, or the interest thereon.

Automatic Steam Trap.

The condensation of steam, by coming in contact with the cold surfaces of pipes, engine cylinders, and other vessels where it is employed, prevents the full operation of the steam, besides being a source of annoyance to engineers, and occasionally of loss to the proprietors. But partial success has hitherto attended the inventions having for their object the discharging of this condensed water, and at the same time prevent the escape of the steam. Mr. Lapham's improved steam trap, for which Mr. C. A. Durgin, No. 335 Broadway, is agent, is designed to obviate all difficulties by rendering the trap perfectly automatic under all degrees of steam pressure, and to require no attendance whatever when once properly attached to the apparatus to be relieved from condensed water. The invention consists of a metallic cylinder, into which steam is admitted through two openings on opposite sides of a ball which rests lightly upon a rod, and instead of being fastened to the rod, as in similar contrivances, it moves up and down upon it. The end of a lever rests lightly upon the top of the ball, which is so arranged, in combination with other levers, that while the ball raises it with the utmost ease, it accumulates power which acts upon the rod, and, as the ball rises, opens a valve in the bottom of the apparatus which lets out the water. If the orifice is not large enough to let out the water with sufficient rapidity, the water still retained will, of course, float the ball still higher, and this will open a longer valve and let out the water with sufficient rapidity.

The advantage in this contrivance seems to be in making the accumulating water raise simply the ball, without raising the additional weight of the rod necessary to open the valve. This is accomplished by the arrangement of levers, accumulating the power of the float. In one instance, it is claimed, in an oil mill, two of these traps, costing $64, were substituted for twelve, costing $240, which failed completely, and the two traps have performed the work perfectly under a variable pressure of from five to fifty pounds of steam for the past six months.

Lehigh Coal and Navigation Company.

From the annual report of this company for the year ending December, 31, 1859, which was submitted to the stockholders at their annual meeting on the 1st inst., we learn that the profits for the year 1859 were, from ground and water rents, and from lots sold, $31,610 71; from coal, $186,609-04; and from tolls, $454,463 45; amounting to a total of $672,683 20, against $595,856 94 for the preceding year; and showing an increase of $76,-826 26.

For the year 1859, after paying State tax, interest, repairs, improvements and expenses, the *net* earnings were $415,641 88, against $343,864-50 for the year 1858; being equal to an interest of nearly 17 per cent. upon the capital stock, and exhibiting an improvement over the year 1858, of $71,777 38.

The following is a summary of the liabilities and assets of the company to January 1st, 1860:—

LIABILITIES.

Capital Stock	$2,479,950 00
Common Loans	2,790,081 92
Mortgage Loan	829,172 00
Floating Debt	265,822 85
Unpaid Dividends	5,757 20
Arrears of Interest	54,513 88
	$6,425,297 85
Balance to the credit of Profit and Loss account	3,166,898 75
	$9,592,196 60

ASSETS.

Canal and River Improvements	$4,455,000 00
Lehigh and Susquehanna Railroad	1,380,000 00
Real Estate, cost of coal mine lands and other lands, Railroads to the several mines of the Company, and other improvements, Wharves and Landings at Philadelphia, &c.	1,453,789 00
Moveable effects, Debts due the Company, Bills Receivable, Bonds and Mortgages, &c	1,071,490 51
Contingent Fund: costs of investments	1,210,253 67
Cash on hand	21,668 42
	$9,592,196 60

The Co.' tonnage of the canal, for the year, was 1,050,659 tons, an increase over 1858 of 141,660 tons. Of this, 490,611 tons were taken from the Company's mines, which, in addition to 56,205 tons from the Company's mines at Tamaqua, show the total, for the year, of 546,817 tons for the Company.

The shipments of lumber, for the season, were 42,933,655 feet; showing an increase, over those for the year 1858, of 7,036,754 feet. The freight of all descriptions, for the year 1859 amounted to:—

	Tons.
Descending	1,190,374 03
Ascending	116,744 12
Total	1,307,118 14

A resolution was adopted, to the effect that a committee of three stockholders and four managers (the President being one) be appointed and requested to report at the next annual meeting of stockholders, such action as they may deem advisable, with a view to enable the stock and scrip holders to realize the full benefits earned by the Company.

Of this Scrip there has been issued, as recommended by a resolution passed at the meeting of the Stockholders held 1st May, 1855, as follows, viz:—

1855,	certificates f.	9,905	"scrip shares," which when converted into stock, will amount to $495,250
1856,	do.	11,882	"scrip shares," will amount to.. 594,100
1857,	do.	14,273	"scrip shares," will amount to.. 713,650

Making a total of 36,060 "scrip shares," which, when converted as aforesaid, will add to capital stock account.... $1,808,000 and the like amount will then be chargeable against the balance standing to the credit of profit and loss.

The following gentlemen have been elected officers of this company for the current year:

President, JAMES COX.

Managers, Erskine Hazard, John Farnum, Henry J. Boller, Richard Richardson, Alexander Fullerton, Andrew Manderson, James S. Cox, Jacob P. Jones, Francis C. Yarnall, Samuel E. Stokes.

Treasurer, EDWIN WALTER.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 2nd May, 1860, were as follows:

Pittsburg, Fort Wayne and Chicago R. R.

By a recent decision of the Supreme Court of Pennsylvania, the entire line of this road has been placed in the possession of the receiver, Wm. B. Ogden, Esq.

Refrigerator Car Company.

The "Refrigerator Car Company" sent to this city on Wednesday from New York a car of peculiar construction in which fresh meats and fish can be preserved pure and sweet for a week or more in the warmest weather. It is lined with zinc, and is made something after the style of beer-coolers in lager-drinking establishments. The car came through without detention—having the compromise gauge wheels—and will return over the Bellefontaine and connecting lines. It was loaded with fresh shad, lobsters, oysters, &c., and will go back with poultry and other products demanded in the New York market.—*Indianapolis Journal.*

Pennsylvania Railroad Company's Machine Shops at Harrisburg.

The machine shops of the Pennsylvania Railroad, in the Sixth Ward, are progressing finely. A large force of workmen under the direction of Mr. Stephen D. M'Calla are engaged constructing the necessary sewerage and foundation walls, which are so far advanced as to be ready for the superstructure to-day or to-morrow. The round house will be an immense affair, probably the largest in the United States, and will be constructed entirely of brick and iron, the casting of the latter being now in progress by the Harrisburg Car Manufacturing Company.—*Harrisburg Pat.*

Pennsylvania Railroad Elevation above Tide.

The Pennsylvania Railroad at grade, is above tide, at Harrisburg, 310 feet; at Lewistown, 488 feet; at Huntingdon, 610 feet; at Tyrone, 886 feet; at Altoona, 1,168 feet; at west end of Alleghany mountain tunnel—summit of mountain—2,161 feet; at Johnstown, 1,184 feet; at Blairsville Junction, 1,117 feet; at Greensburg, 1,091 feet; at canal bridge at Pittsburg, 748 feet; the bottom of the Ohio river bed at Pittsburg is 700 feet above tide.

Mobile and Spring Hill Railroad Company.

We learn that the stock subscriptions of this company amounted yesterday to about $35,000. This is half the sum necessary for the building and stocking of the road. The charter authorizes the organization of the company on the subscription of $20,000. The whole capital, no doubt, will be subscribed within a few days. An organization was effected on the 5th inst, by the election of the following named gentleman as directors: W. T. Moore and W. B. Hamilton, Mobile; Emanuel Jones, Thomas J. Fettyplace and John C. Dawson, Spring Hill; David Stodder, Summerville; Jas. L. Ewing, West Ward.—*Mobile Trib.*

Heavy Right-of-way Suit Decided.

The case of Daniel Blake *vs.* the Charleston and Savannah Railroad Company which has been pending for some years before the Superior Court of Colleton District, S. C., was finally decided last week. The company's road runs some four miles through the land of Plaintiff, and being unable to agree upon the amount to be paid for the right-of-way, Blake brought suit, laying his damages in the sum of *sixty nine thousand dollars.* Upon the trial, the jury found a verdict for Plaintiff in the sum of four thousand, seven hundred and fifty dollars, which amounts to quite an abatement of his original claims.—*Sav. Republican.*

Indiana and Illinois Central Railroad.

At the regular annual meeting of the stockholders of the projected Indiana and Illinois Central Railway, held on the 2d inst., the following Directors were unanimously elected to serve for the ensuing year; Henry Prather, Benj. Ellars, Jas. R. Hammet, Robert Hopkins and William Jones, of the State of Illinois; Erastus M. Benson, Samuel B. Bushnell, Jeremiah Depen, Jas. Johnson, Edmund Clark, Washington H. Talbott and Michael G. Bright, of the State of Indiana; and the following officers are elected for the ensuing year: Edmund Clark, President; Jas. R. Hammet, Vice-President; James M. Sharpe, Secretary; Edmund Clark, Treasurer.

Marietta and Cincinnati Railroad.

In the Court of Common Pleas for Ross County at Chillicothe, Judges Dickey and Briggs present, the sale of the Marietta and Cincinnati Railroad property, as made under a decree of this Court, was confirmed. One hundred thousand dollars of the purchase money has been paid into Court.

It will be remembered that, of the amount for which the property was sold, fifty thousand dollars is set aside for the payment of back dues to employees.

Arrangements for the completion of the road have not yet been perfected, owing to the necessarily tedious process of communicating with the foreign proprietors. No opposition was made to the confirmation of the sale.—*R. R. Record.*

Welland Canal.

The Welland Canal, connecting the waters of Lakes Erie and Ontario, was opened this year two weeks before the opening of the New York State Canals. It has been seriously proposed to construct a railroad alongside of the Welland Canal, so as to facilitate the transit of goods. Mr. MERRITT, member from St. Catherines, said in Parliament last week, that according to official report, the cost of enlarging the Welland Canal would be two millions of pounds. The capital required to build a single track along the side of the Canal would be four hundred thousand dollars, so that a single track railway could be built every year for less than the interest of sustaining the Canal.

Buffalo and Pittsburg Railroad.

A contract has been made with Messrs. King & Co. to finish and put in running order immediately that portion of this road leading from the coal-fields in McKean County to the New York and Erie Railroad, thus giving outlet to the Lake at Dunkirk for the coal of that region. The work to be done is laying the iron only. Some three years since that portion of the road was ready for the iron, and but for the opposition experienced, the road would have been bringing to the Lake cheap fuel long ago, and giving life to this city. Dunkirk will be immediately benefitted by this connection, and become the most important coal shipping port on the Lake.—*Cin. Inq.*

WANTED.

SIX OR EIGHT SECOND HAND PASSENGER CARS, for a railroad of 4 feet 8½ in. gauge. Must be delivered in the vicinity of New York.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.
New York, March 29, 1860.

AT a meeting of the Board of Directors of the ILLINOIS CENTRAL RAILROAD COMPANY, held this day, it was

Resolved, That an assessment of Five Dollars per share upon the Capital Stock of the Company, be, and the same is hereby called, payable on the 15th day of May, 1860; and that the same be payable on the stock registered in the City of New York, at the office of the Company in that city, and on the stock registered in London, at the office of Messrs. ROBERT BENSON & Co.; and that parties desiring to pay their instalments in London, may pay the same, at the rate of four shillings two pence sterling to the dollar.

Resolved, That the Transfer Books be closed on the 10th day of May, and re-opened on the 15th, and that no transfers be permitted after that date, of shares upon which such assessments shall not have been paid.

Resolved, That interest at the rate of seven per cent. per annum be allowed upon all assessments paid previous to the 15th of May, and charged at the same rate upon all assessments paid after that date. By order of the Board.

A. E. BURNSIDE, Treasurer.

OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY. March, 1860.

The holders of the Bonds of this Company, due July 1, 1860 can now receive, upon application at this office, 10 per cent. in cash, upon the terms specified in the Circular attached.

The holders are also entitled to the benefit of a Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,308,400. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.

The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.

A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.

Terms of receipt and endorsement will be furnished on application.

By order of the Board of Managers.

2m15 W. H. McILHENNY, Secretary.

12.	" 18 "	1 to 1	24. " 32 "		1¼ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

W. H. McVICKAR, President.

S. RUST'S PATENT (applied for) OIL CANS.

This improvement consists in a chamber, or inner wall, on the top of the body of the Can, to catch and save the drippings that come from the tube after using.

The chamber is made large enough to save all drippings that will be accumulated while using a can full of oil, and when the tube is unscrewed to refill the Can, the oil therein collected will run back, keeping the Can always clean on the outside, as well as saving the drippings which are always waste, when using the common cans, by running down the outside & keeping them constantly covered with oil, which difficulty this Can entirely obviates.

Price from $1.25 to $3.50 per doz., according to size.

Attention is invited to the Sewing Machine Can, which is got up in a cheap and handsome manner. Also the common Oil Cans, Door Escutcheons, Drops, Key Bases, etc., at the lowest prices.

Manufactured by S. RUST, Jr.,
162 West 28th Street, New York.

☞ The only Can that will always keep clean while in use. ☜

SPERM, WHALE, LARD AND OTHER OILS,
For Railroads, Steamers, Machinery and Burning.

THE IMPERIAL LUBRICATING OIL,

MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time**, and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval**, renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!

PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CEMENTS.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for an sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.
E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 99 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

(SUCCESSORS TO DWIGHTS, FRENCH & CO.,)

SEYMOUR, CONN.,

ARE prepared to fill, at short notice, of the best materials and workmanship, orders for **Wrought** and **Cast Iron Work**, fitted ready for use, for the building or repairs of **Passenger** and **Freight Cars**, complete or in part.

A sample wrought iron truck can be seen at our office.

No. 5 Gold st., NEW YORK.

We also manufacture—

BEST FAGGOTTED CAR AXLES.
SALISBURY IRON CAR WHEELS.
WROUGHT IRON BOLTS, NUTS AND WASHERS,
RAILROAD JACK SCREWS, ETC.

RAYMOND FRENCH, President, Seymour, Conn.
WM. H. MARSHALL, Treasurer, No. 5 Gold st., N.Y.

STEEL

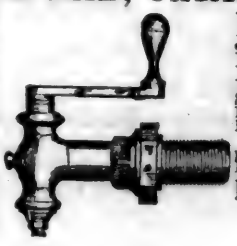
CAR SPRINGS,

MANUFACTURED

BY THE

PATENTEE,

CARLOS FRENCH,



SEYMOUR, CONN.

THESE **SPRINGS** are now in use on many of the **leading Railroads** East, South and West.

Samples can be examined and Price Lists obtained at

No. 5 Gold st., NEW YORK.

McNAB, CARR & HARLIN,

MANUFACTURERS of Steam Engine Builders' and Plumbers' **BRASS WORK**, such as Globe Valves, Safety Valves, Pump Valves, Whistles, Oil Cups, Steam and Water Gauges, Bibbs, Stops, Basin Cocks, Hose Pipes and Couplings, etc.

All parties interested will please send for Catalogue and Price List. Address

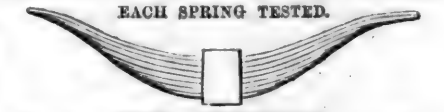
McNAB, CARR & HARLIN,

16 John st.,

NEW YORK.

PHILIP S. JUSTICE,

21 North Fifth St., Phila. 54 Cliff St., New York.



152 Congress Street, Boston.

English Railway Springs,

MANUFACTURED OF

Best Double Faggotted and Improved Cast-Steel

EACH SPRING TESTED.

FOR FREIGHT

AND PASSENGER CARS,

LOCOMOTIVE ENGINES,

ETC.

EXTRA CAST STEEL FOR TOOLS AND DRILLS. "CONCENTRIC" SOFT CORE TAP STEEL, (warranted not to crack in hardening,) best double Faggotted and Cast SPRING STEEL, ribbed and plain; Machinists' Files, "Crescent" Faggotted Axles, Wrought Locomotive and Passenger CAR WHEELS, Homogeneous Metal, etc. Manufactured by

CHARLES CAMMELL & CO.,

"Cyclops" Steel Works, Sheffield.

Victoria Bridge.

(Continued from p. 390.)

CONCLUDING ARTICLE.

The previous article concluded the description of this structure as an engineering question. We have not sought to detract from the admiration due to its massiveness, or the grandeur of its proportions, but to show the want of relationship between its cost and its object, or the service it was designed to perform. The maintenance of such relationship is, with us, the true test of skill and ability in the profession. It is not the function of railway companies to erect monuments for the gratification of the popular tastes, or to excite wonder, but to execute all in a manner that will produce the largest income on the investment. Such a standard always calls for good, and oftentimes expensive work, but never for unsuitable or extravagant ones.

The Victoria bridge is just one of those cases in which an imaginary necessity overrode all prudential considerations. Canada sought to make her territory the route to market for the products of the interior. She was influenced by the same idea that has wrought so much mischief in the "States." A vast number of our railroads have sprung from the same notion—that they would bring to the community constructing them, the trade of a given area of territory. The assumption was, that commerce follows mathematical lines; and that if merchandise could be sold as cheap in a small town as in a metropolis, all the inhabitants of the former had to do, was to construct a railroad as a certain means of drawing the trade of all the territory that lay nearer to them than to another town, no matter how rich or populous it might be. Experience has demonstrated the fallacy of all such reasonings. Many a flourishing town has been ruined by the very work that was to make it. The moment commerce is lifted from its necessary to convenient channels, by necessary attraction it flows to the great centres. This is its law, which is as certain in its operation as that of gravity.

Another cause which operated very strongly and injuriously in the present case was the peculiar relations that Canada sustained, both to Great Britain and the United States. A work like the Victoria bridge would not have been constructed on any route of similar importance in the United States, for the reason that its absurdity would have been palpable the moment it was suggested.

We know of no route in this country in which such a structure would pay. It would not between New York and Brooklyn, over which 100,000 persons, perhaps, pass daily. It would not across the Hudson, opposite New York, on the great route to Philadelphia. It would not across the Hudson at Albany, to connect the Central with the Hudson River and Western Railroads, three great works. If proposed on routes of *secondary* importance, the extravagance of such a proposition would only provoke ridicule. But the Canadas, from their relations, have no such standards of comparisons. In the matter of railroads they were, when the Victoria bridge was proposed, where we, in the States, were ten years previous, when success was predicated as a matter of course, from every work undertaken. Canada like a good loyal Province, as she is, would not take pattern from the only example she could safely look to. She sought out the most expensive works of the old world as the type for her own, without once thinking of the difference between the richest country in the world, with a population on the line of her public works of more than 500 to the square mile, and constantly moving from the necessities of their pursuits, and a new State almost entirely devoted to agriculture, the density of whose population is not one-twentieth as great, and whose necessities and means for traveling are not one-quarter as great per head. It is too early either in the United States, or Canada, to copy in their works the structures of the old world. The wide differences that exist, are to be respected. In England, costly structures are often a necessity of the political condition of the country. The noble and privileged classes, when they travel, must have accommodations not very far below those to which they are habituated. The necessity shows itself in the elegant character of the structures it is common to meet on the lines of railroad. Take the Great Western Station in London, for an example. We do not feel the necessity for such expenditures, and reject them as unproductive. But Canada, when the Grand Trunk was undertaken, was just in that frame of mind to take all her standards from the mother country. Not only this, but English engineers, accustomed to works of vast magnitude, because adapted to an old rich and populous country, were summoned over to prescribe in a case in which they had not the slightest guidance from experience, and who would have been more than human, could they, without such experience, fully comprehend the difference between the Old World and New. With the physical phenomena of the New, they had no practical acquaintance. They acted just as men always act under such circumstances; they followed the guidance of their own experience and preconceived notions, and were deaf, without knowing it, to all suggestions that might run counter to their own. The idea of a bridge, on the site of the present one, was nothing new. In this country, it was never supposed to involve uncommon difficulties or risks; or to be excessively costly. There were 50 bridge builders in the United States who would have eagerly undertaken the work, giving ample security for its execution and permanency.

The whole matter had been carefully considered

by the most experienced and competent engineer in Canada, who was "to the manor born," and who saw the whole thing in a correct light. The new advisers complimented his experience, just as sincerely as men can who have no sort of realization of what they are talking about. The existence of such a man as Mr. Keefer, Mr. Stephenson only unconsciously assented to, just as we hear and forget conversation that has no interest for us. We, by no means, say this by way of censure to Mr. Stephenson. He was called to a patient, the diagnosis of whose case he was incompetent to take. He had been trained in another school. The mistake he made was in not replying to the application for his services—"You had better follow the direction of your own engineers; their experience will suggest the proper plan for the work. I have not such experience, and am not, consequently, a competent adviser." Such a reply would have saved his countrymen, on whom the loss is eventually to fall, millions.

With regard to our critique upon the structure, we have endeavored to, and we hope we have treated the question fairly. We have given, in all cases the data from which we have reasoned. If we have been wrong in any particular, this can be readily shown. If the bridge cost, either from its plan or execution, an excessive sum, the fault, wherever it is, should be exposed to prevent repetition. We are on dangerous ground the moment we admit any other excellence in a railroad structure than *uses*. A work that costs two dollars, where a different one costing one, would answer equally well, is a faulty one, no matter how ponderous, or artistic, or beautiful it may be. The stockholder who loses his money derives no gratification from such qualities. They are, in fact, a fraud upon him, as a misapplication of his money.

We have certainly written without any prejudice in the case. No one would be more gratified at the success of the bridge, or of the Grand Trunk Railway. But when we see all hope of success destroyed by inappropriate works, upon which millions are recklessly squandered, it is our duty to speak, no matter how great or sacred the names that have counselled or countenanced such wastefulness.

AN AMERICAN ENGINEER.

Port Royal Railroad.

We learn that the survey of the line of this road has been commenced by Mr. C. S. Gadsden, assisted by Messrs. Haynes and Postell. Messrs. Davant, Elliott, and Heyward were present, with other strong friends of the enterprise. The point of commencement was beyond the Salkehatchie, about fifty-two miles from Charleston. The desire is to run, as nearly as practicable, an air line to Sand Bar Ferry, three miles below Augusta. This survey is done under the auspices of the planters, by their own contributions, and furnishes a striking example of enterprise, which, in its results, cannot fail materially to benefit our city.—*Charleston Mercury.*

Selma and Uniontown Railroad.

The Linden *Jeffersonian* states that the engineer employed to survey a route for the continuation of the Selma and Uniontown Railroad to Meridian, commenced his labors at Uniontown on the 16th ult., and that the work will be continued until all the surveys necessary are made. It also expresses the opinion that the route by Dayton, Linden, James' Bluff, is the one that ought to be, and will be, selected.

Baltimore and Ohio Railroad.

OFFICE BALTIMORE AND OHIO RAILROAD CO., April 2d, 1860.

The operations of the Baltimore and Ohio Railroad Company for the fiscal year terminating September 30, 1859, exhibited a reduction of the working expenses of the Main Stem of 19.07 per cent. as compared with the preceding year, and an improvement in the aggregate comparative result on the Main Stem and Branches for the same period of $992,595.37.

As these results were deemed extraordinary, and much interest has been manifested in reference to the business of the company since that period, it has been dicided to present the financial statements for the fiscal half-year closing on the 31st ultimo, which are subjoined.

The gross earnings of the Main Stem have been $1,840,798.45, being an increase compared with the same period of the preceding year of $78,008.80.

The expenses of working and keeping the road and machinery in repair have amounted to $829,697.53, being 45.07 per cent. upon the revenue, exhibiting a decrease compared with the same period of 2.80 per cent., and of 1.49 per cent. as compared with the last full fiscal year, embracing the less expensive period of the summer months.

The company has continued to make its purchases for cash, and is entirely free from floating debt.

During the six months the company has:

1st. Advanced additionally, under the agreement which terminates at the close of the year 1861, after crediting all revenue received to the Northwestern Virginia Company, for the payment of interest, including $45,000 on the bonds of that company, guaranteed by the city of Baltimore, and for expenditures in improving the condition of the road, &c. $160,934 24

2d. Paid for rolling power, (payment to Ross Winans for locomotives under contract assumed for Northwestern Virginia Railroad Co.).... 6,976 00

3d. Increased the several Sinking funds, exclusively by investments from the current net earnings, viz: The Sinking fund for the redemption of the City Loan to $692,114.36, being an increase of..... $20,499 60
For redempt'n of Mortgage debts to $563,055.06, being an increase of..... 149,833 33
For redemption of Ground Rents on Camden Stat'n to $73,471.68, being an increase of..... 12,751 75

Aggregate inc. of Sink'g funds.. 183,084 68

4th. Paid the semi-annual cash dividend of 3 per cent. on the 9th Nov. last on the Capital Stock..... 303,348 00

Exhibiting a total of..... $654,342 92

The company having a surplus of cash beyond its requirements, advanced to the Trustees, who invested a large portion of the interest due on 1st of July next, on the mortgage and ground rent sinking funds, which accretions are embraced in these accounts.

The aggregate of the sinking funds now exhibits the very satisfactory and rapidly increasing basis of $1,328,641.10.

Although two per cent. per annum of the net earnings are absorbed in the maintenance of the sinking funds, the wisdom of the policy is palpable, as full provision is thus made for the payment of the entire funded debt of the company.

The balance of cash in the Treasury on the 31st March was $325,522.38, which was in addition to $165,000 deposited for the payment of interest on the city loan and the bonds of the company, which matures on April 1st.

The bills receivable and sum due from the Post Office Department for mail service amount to $83,569.01. The uncollected revenue is $364,201.26. In anticipation of interest due in London on 1st July next on bonds of State of Maryland, $24,166.67 have been remitted to Messrs. Baring Brothers & Co.

After charging $370,084.87 interest and ground rents, $2,000 in settlement of a suit of 1856, and crediting the dividends and rents received from the Washington Branch, the increments of the sinking funds and house rents received, the net gain is shown for the fiscal half year of $738,726.42, being upwards of 7¼ per cent. on the capital stock.

Deducting the dividend of $303,348, paid on November 9th last, the profit and loss accounts exhibits a surplus of $6,527,695.33, being an increase for the half year of $435,378.42.

The revenue of the Washington Branch for the six months amounted to $216,184.23, and the working expenses to $80,405.44, leaving the net sum of $135,778.79.

The gross revenue shows a decrease from the corresponding period of the preceding year of $12,045.53, and a decrease of working expenses of $11,725.88.

The ratio of working expenses for the six months exhibits a reduction from 40.37 to 37.19 per cent.

The revenue of the North-western Virginia Railroad for the fiscal half year has amounted to $129,607.11, and the working expenses to $90,445.70.

The gross revenue is $6,668.13 less than for the corresponding period of the preceding year, but as the comparative expenses have been reduced $11,266.47, the net result presents an increase of $4,598.34. The ratio of working expenses to revenue for the half year exhibits a comparative decrease from 74.63 to 69.78 per cent.

The aggregate revenues, working expenses and net results of the Main Stem, Washington Branch and North-western Virginia Railroad, for the fiscal half years terminating respectively 31st of March, 1859 and 1860, have been, viz:

	1859.	1860.
REVENUE.		
Main Stem.....	$1,762,789 65	$1,840,798 45
Washington Br'ch.	228,229 76	216,184 23
N. W. Virginia...	136,275 24	129,607 11
	$2,127,294 65	$2,186,589 79
EXPENSES.		
Main Stem.....	$843,943 70	$829,697 53
Washington Branch.	92,131 32	80,405 44
N. W. Virginia.....	101,712 17	90,445 70
	$1,037,787 19	$1,000,548 67
Total increase of gross revenue		$37,238 52
Total decrease of working expenses...		59,295 14
Total increase in net earnings....		$96,533 66

The condition of the road and machinery has not only been fully maintained, but improved.

The large traffic of the company is being transacted with great safety and regularity; the general exemption from accidents continuing to be, as compared with other roads, alike remarkable and gratifying.

Indications of improvement and renewed prosperity in the business of the country are becoming general, and promise still more favorable results for the remainder of the year. By order of the Board.

JOHN W. GARRETT, *President.*

Mobile and Great Northern Railroad.

With reference to the difficulties of the city of Mobile with the Mobile and Great Northern Railroad, the *Advertiser* of that city says:

We learn that the Chancellor of this district has rendered his decision in the case of R. L. Watkins and others against the Tax Collector of Mobile. It will be remembered that an injunction was sued out in the Chancery Court to restrain the Tax Collector from proceeding to collect the taxes assessed under the contract recently made between the city and the Mobile and Great Northern Railroad Company. On the filing of the bill the in-

junction, of course, issued, but, on considering the case, the Chancellor has decided in favor of the legality of the tax, and dissolved the injunction. An appeal will doubtless be taken to the Supreme Court, where the matter will be finally adjudicated at the approaching June term.

Steam Engineering in 1859.

(Continued from p. 328.)

Concluding Remarks—The first paper of this series appeared in the May number, and was intended to point out the avoidable difference existing between the present practice of steam engineering, and that which, if generally adopted, would result in many and undoubtable advantages

It was intended also to indicate that steam engineers were practically neglecting to appreciate the only true principles in steam engineering, on which all economy must rest, and that with few exceptions, we are literally wasting money and time by allowing the manufacture of steam engines to degenerate into a mere trade.

During the past six months, several instances have occurred, in which the possibilty of an indicated horse power being obtained from the consumption of 2½lbs. of coal. has been more than verified, and these instances have, in many particulars, confirmed fully the truth of all we have stated in reference to the economy of steam power.

Paddle engines of considerable power are now regularly working with a consumption less than 2½ lbs. of coal per hour, and this is accomplished with all the disadvantages arising from the use of salt water. This creditable result is due, solely, to an intelligent appreciation, by the designer, of those truthful principles we have endeavored to recommend.

In another case of recent improvements in steam power, by an improved class of boiler, the use of distilled water, conservation of heat, and extensive development of the expansive principle, an indicated horse power has been realized by a consumption considerably less than 2 lbs. of coal per indicated horse power per hour.

In another case, with more limited expansion and pure water for evaporation, the coal consumption has averaged for a considerable period less than 2½ lbs. per indicated horse power per hour.

The above cases in actual practice, are well authenticated, but it is unnecessary to remind the practical reader, that, in the application of steam power, many conditions have to be fulfilled besides that of economizing fuel; cost of construction, simplicity, safety, weight, space, durability, have all to be separately considered; and the greater the change introduced, the longer the time required to test it before it deserves the confidence of the public.

To insure the acceptance of our statements, even by those most indisposed to wander from the beaten track, in all cases we have stated *less* than the truth; that is, present defects have been leniently represented, and the advantage that may be obtained from attention to true principles of economy, has been underrated.

It must not be forgotten that the success of improvements, and more especially their general adoption, are greatly dependent on the moderation of the engineer who introduces them; many a fair and useful change has been kept in abeyance for years, by a want of moderation and judgment in the inventor. Experience teaches us that it requires more judgment to decide how and when to introduce an improvement, than it does to decide on the merits of the improvement itself.

In marine engineering, safety and the greatest possible freedom from risk must be secured, even, if necessary, at the cost of economy; and whoever introduces changes of a radical kind, incurs a heavy responsibility, and may, by a want of prudence, be a curse to his patrons and the profession; but this somewhat severe caution need not disturb or check the honest and earnest inventor; his success is certain, if he is moderate and *progressive*.

There are many good and practical engineers and mechanics, but few practical philosophers—we publish the shell but waste the kernel. When shall we estimate the efficiency of a steam engine by the difference existing between heat expanded and heat utilized? When shall we appreciate the vitality and importance of the true principles of economy, as distinct from mechanical construction? When shall we cease to sacrifice solid advantages to apathy, ignorance, and trade puffery?

In the June number, the generation of steam was considered, and we trust are readers will excuse our requesting particular attention to the statements made on that subject.

Statistics embracing a large field of observation have late been published, giving accurate information on the duty and economy of the Lancashire engines and boilers, and we have the satisfaction of knowing that these statistics have most fully confirmed our own estimates, a matter of no slight importance, when it is remembered that present duty must form the basis from which all improvements spring.

A steam *engine* is attractive to the young steam engineer, but what does he care about the dirty black looking *boiler?* As a general rule (comparatively) he never takes any interest in boiler construction until he is thrown on his own resources, when he is compelled to do so to maintain his credit and position; there are now hundreds of engineers holding important and responsible positions, in positive ignorance of the laws that determine the economical efficiency of a steam boiler—dogmatism takes the place of knowledge, and we pick the fruit of such a state of things in wholesale waste.

Perfect combustion is the starting point in steam generation, and thanks to the perseverance of some, earnest in their adherence to first principles, there is a prospect of great improvement in the furnace arrangements of steam boilers; but it is extraordinary what time it takes to convince engineers that it is impossible to obtain a sufficient supply of air through the grate bars; or that perfect combustion is not attainable except at a very high temperature; and that space should be given to allow the air and gases to combine.

The conversion of coal and air into an equivalent of heat must be the first process—and then, as the second process, that heat can be applied with full effect—but the custom is, by low furnaces and contracted combustion chambers, to begin the second process before the first is half completed, the result being a certain loss.

With brick furnaces a much less space for combination and combustion is sufficient, as the furnace case approaches in temperature that of the furnace itself; but with furnaces inside a steam boiler it is quite different—the plates surrounding the fuel are always at a low temperature compared with that of combustion, and will, if in to close contact with the fuel, absolutely prevent the necessary temperature for perfect combustion ever being attained.

This is so self-evident that the present faulty construction of boiler furnace is quite unaccountable.

In the boilers of the *Great Eastern*, it is quite evident that they were designed in improved accordance with the right principles of construction we have alluded to—the combustion space being in excess of the general practice.

In the June and July numbers, we pointed out the characteristics of the wasteful and economical generation of steam, and as they are more neglected than any other connected with boiler construction, we must yet add a few more statements in illustration.

It must be allowed as undisputed that with an average rate of combustion and a given class of boiler, a certain amount of heat absorbing surface must be given to take up the heat generated in the furnace, minus what is required for draft in the uptake—if this surface is not given, a certain amount of the heat is transferred from the water to the chimney.

Referring to the tables of ratios in the June number, we find experience fully confirms the fact stated above; and it will be found without a single exception, *other points of construction being similar*, the evaporative duty obtained from a pound of coal is always proportionate to the ratio between the heating surface and the rate of combustion, a large ratio increasing, and a small ratio decreasing that duty.

It is matter of sincere regret that we have to select as one of the most striking cases of a neglect of the above undeviating principle of economy, the boilers of the *Great Eastern*.

In February, 1855, the late Mr. Brunel reported to the proprietors of the great ship, that much attention had been paid to economy of fuel in the design of the boilers, and that, to prevent a chance of error, an experimental boiler had been made. After such a report it might have been expected that a maximum evaporation would be obtained from the coal.

At pages 137 and 138, are given two experiments of evaporative duty in boilers of similar construction to those in the *Great Eastern*, except as to the ratio of heating surface to rate of combustion, which was, in the first case, 0·83 to 1, and in the second, 1·9 to 1. The difference of evaporative duty in these boilers was nearly 40 per cent.

In the boilers of the *Great Eastern* there are only some 20 square feet of heat absorbing surface to one square foot of fire grate, and with 100 feet height of chimney, and a high temperature in the uptake, there is every reason to believe, the furnace, when fully supplied, would consume *at least* 20 lbs. of coal per square foot of fire grate. or 430 tons per day, and with dampers fully open, it is difficult to believe that less than 24 or 25 lbs, of coal were burnt per square foot of fire grate. No practical man, who has well considered the subject, can accept the statement, that when working the boilers at their full steaming power, the consumption of coal was only 309 tons a day, or 14 lbs. per square foet of fire grate.

It is no matter of surprise that the water jacket became a second boiler, for it is quite certain, with the deficient heating surface a high wasteful temperature in the uptake is inevitable.

The remedy in the case of the *Great Eastern* is to take away at least one-third of the great surface, and adopt some plan for preventing the loss arising from condensation in the cylinder—the result of such alteration would be a considerable decrease of the coal consumption and a considerable increase in the power of the engines and the speed of the ship.

In steam generation it is simply a matter of *choice* with the steam engineer as to what evaporative duty (within certain limits) he obtains from the fuel—shall it be 6, 7, 8, 9, 10, or 11 lbs. of water evaporated by a pound of coal? He can obtain either result without any radical change in the construction or form of boiler.

Before leaving the subject steam generation, we must once more revert to the defective circulation of the water in marine and locomotive boilers. It is somewhat difficult to estimate the amount of loss incurred by deficient circulation, but there is no difficulty in proving that a considerable loss of evaporation is incurred, and also that another certain evil results—namely, premature dstruction of the conducting metal.

In the August number, "the application of steam as a motive power" was considered, and the importance of maintaining the temperature of the steam in its passage to and through the engine, and of avoiding all premature condensation, was strongly represented.

The economy to be derived from the steam case or jacket round the cylinder is still disputed, but it is strange that the bulk of the objectors to the jacket have, in no case, made a fair comparison of economy by dynamometer or indicator, with and without the jacket. Cornish engineers object on account of the piston packing being effected by the heat given out by the jacket. To remedy this, the jacket was removed. and "they never noticed any increased consumption of coal." Most scientific conclusion, truly! !

In addition to the cases already given of econo-

my derived from the application of steam jackets, we may add two more. In each case the experiments were carefully made with and without the jacket. In the first case a saving of 27 per cent. was realized with the jacket, and the water condensed in it was less than 5 per cent. of the total quantity evaporated.

In the second case the saving was 22 per cent. with the jacket. The water condensed in it not being ascertained.

There are two points worth consideration in estimating the economy to be derived from steam jackets in condensing engines. The first is, that there is condensation only, and no re vaporation in the jacket as in the cylinder. And secondly, that during half of each stroke the condensation in the jacket is practically uniform at all rates of expansion. It must also be borne in mind the re-evaporation that takes place during the exhaust stroke in the cylinder, not only robs heats from it, but requires increased duty from the condenser.

Superheated steam with an old boiler is often an evidence of original defective construction, but applied to a well designed new boiler it has advantages difficult to obtain in any other way. Any plan by which a greater amount of useful effect can be derived from the heat generated in the furnace, is a step in the right direction, and time and experience alone will prove what effect the highly heated steam has upon the working valve and cylinder surfaces.

There is a striking similarity in the amount of economy derived from the use of steam jackets and that of superheated steam.

Without expansion, 40 lbs. weight of steam will give an indicated horse power; with an expansion of three times, or cut off at one fourth the stroke, 18 lbs. weight of steam will give an indicated horse power, making no allowance for leakage or condensation. Supposing steam jackets applied, and allowing one-fifth for condensation, leakage, &c., and assuming 10 lbs. of water to be evaporated by one pound of coal, and the steam to be expanded three times, *practically* an indicated horse power can be obtained by the consumption of 2¼ lbs. of coal, just one-half of the present average consumption, and this result can be realized without any great change in engine or boiler construction; and be it remembered when this improvement has been effected, we have only *began* to economize. As a commencement, an average of 2½ lbs. of coal to the indicated horse power will be acceptable, and when that is accomplished, we shall find many pioneers doing the same duty with one pound.

As the indicator does not give us the power absorbed in friction, in and beyond the machine, it is impossible to use it in comparing the efficiency of two engines of a different class; for instance, a compound or Woolf engine having the same indicated power and consumption of coal as a single cylinder engine, would necessarily be the least efficient of the two from the increased friction.

The indicated power of the "*Great Eastern's*" engines has been published as 7,600 when working full power, and consuming 300 tons of coal per day; this gives 3¾ lbs. of coal per indicated horse power per hour; but for reasons we have given as to the evaporative duty of the boilers, and from the limited expansion employed, it is to be feared that at least 4¾ or 5 lbs. are required per indicated horse power per hour; a most unsatisfactory result.

In some experiments with engines and boilers similar in proportion to those in the "*Great Eastern*," 4¾ lbs. of coal were consumed per indicated horse power per hour, working under favorable circumstances; and from the class of engines adopted for the screw, a less favorable result even than that referred to, must be expected from them.

It may be taken for granted that if there had been sufficient boiler power in the "*Great Eastern*" to indicate the anticipated 10,000 actual horse power, at least 500 tons of coal would have been consumed per day.

Notwithstanding the adoption, by an eminent firm, of trunk engines for screw propulsion, as simple and compact in a mechanical point of view, they are, by their very construction and the cooling surface exposed, inadmissible as economical engines; and when we practically recognize the truth, that economy of fuel is the great desideratum, this description of engine will be as neglected as it deserves to be. For naval purposes, horizontal engines with double piston rods are almost equally compact with the trunk, and can be worked with very much less waste of fuel.

Reformation always springs from the people; as in politics and religion, so in science, those high in professional position are too often only the remote followers, and not, nay never, the pioneers, or even the encourages of improvements.

To which of our great engineering firms is steam engineering indebted for a due attention to economical principles of construction? Do they not in daily practice ignore the existence of power in heat?

Strange, but most true is it, that the highest price is often given for steam machinery, in the arrangement of which there has been the least attention paid to economical efficiency.

We are loth to believe that the value of a steam engine is to be regulated solely by the excellence of its mechanism and workmanship.

It is quite certain that our government, through its engineering officials, has been instrumental, to an alarming extent, in repressing improvement, and encouraging the "let alone" system in the steam machinery of the navy.

A few fortunate inventors, by (to them) an age of perseverance and a determination not to be discouraged by any amount of official ignorance and red tapeism, have succeeded in obtaining a fair trial of their inventions; but most men who have matured improvements, will not subject themselves to the uncertainty of governmental patronage.

For instance, if an engineer succeeds in reducing the present consumption of fuel by some well proved improvements on boilers or engines, he dare not submit his plans to the Admiralty, because he knows too well the jury will have to give the verdict; and if the great contracting firms who supply Government with marine engineers of the old wasteful type, should disapprove his new plans, where is there a court of appeal? He is forewarned by the experience of others, that the chances are one hundred to one against him.

Better days may, and they assuredly will, come, when all who are competent will be allowed to compete for Government orders, and at the present moment the list of privileged firms is being wisely extended.

It would be difficult to estimate the advantage to the country of offering a premium for the best arrangement of steam machinery for the gunboats; they are used in a service that requires them to have the following qualifications: *First*, to be easily concealed from the sight or hearing of the enemy; *Secondly*, to go the greatest distance with the least weight of fuel; *Thirdly*, to require a minimum amount of repair; and, *Fourthly*, to be able to raise steam at the shortest notice: these are the requirements of the service they are built for. How are they fulfilled?

1. They have a puff blast in the chimney to attract the sight and hearing of enemy.

2. They are wasteful on fuel and go the least possible distance with a maximum comsumption.

3. They require more decided, extensive, and constant repair than any other class of machinery in Her Majesty's Navy, and

4. From two to three hours are required to raise the steam.

Never surely, was there a more striking instance of success in trying "how not to do it."

There is no difficulty whatever by simple and inexpensive alteration in the gunboat boilers and engines, in getting rid of the steam blast in the chimney; reducing the consumption of fuel one-half, to accomplish the same distance as before, or in other words to propel the boats twice the distance for the same amount of fuel; supplying the boilers with pure water, thus avoiding the heavy repairs rendered necessary by the use of salt water in small boilers that cannot be cleaned; and lastly, raising the steam in one-fourth the time required at present.

To those entering the field of steam enginering, we would say, despise no man's opinion or experience—hear all you can, but be careful what you retain for use—those engineers who have been noted for their disrespect and contempt for the opinions of others, are always those who have much the greatest blunders in their own practice.

Successful engineering consists greatly in a wise selection from an extensive experience, and not from that alone of one individual, which is necessarily partial and limited.

In the design and construction of steam engines, the manufacturer is seldom in a position to keep pace with the requirements of the users of steam power, and in proposing changes of construction, tending to economize, he has some difficulty in obtaining compensation for additional cost in increasing the duty realized from a given amount of fuel

If in the construction of railways it was found necessary to introduce a professional man between the proprietor and the contractor, it is still more necessary in the construction of steam machinery, if it is wished to have that machinery designed on the best principles.

At the same time, however, we fear steam engineers of the ability and judgment necessary to take this middle position, are very difficult to be found, and too often the duties are undertaken by incompetent and inexperienced men, who by their blunders create a prejudice against a division of labor that benefits both the user and the manufacturer of steam machinery.

The wide, and we may add, the opening field of steam engineering is full of promise, indeed there is no branch of engineering to be compared with it as regards a certainty of radical and extensive improvement.

In marine engineering, alone, a lifetime is required to make but limited progress, and the influence of that progress will be felt throughout the whole world.

Finally, we must express the hope that these papers will not be entirely fruitless, but that some of our readers will, by their perusal, be induced to assist in the great and important work of STEAM REFORMATION.—*London Artizan.*

Bridge Over the Schuylkill.

The plan for a cast-iron bridge across the Schuylkill, at Chestnut street, Philadelphia, adopted by the Common Council, is that furnished by Strickland Kneass, Chief Engineer and Surveyor. The bridge will have two spans of 185 feet each, the centre pier resting upon a rock in the middle of the river. There will be a 20 feet rise of each, and each span will be composed of seven cast-iron arches. The carriage way is to be 25 feet in width, with footways of 8 feet on each side. The bridge will be highly ornamental, in Gothic detail. The approach to the east side of the bridge will commence with masonry on Twenty-third street, with a bridge crossing Twenty-fourth street, with connecting steps for foot-passengers. On the west side the grade will be raised from Bridgewater street, with masonry to Keen street. The abutment on this side of the river upon solid rock. As to the durability of cast iron bridges, much was said in the Councils, some of the members inclining to wooden and stone bridges; but the committee having the matter in charge, examined the subject thoroughly, and consulted with several engineers, all of whom approved of the plan submitted. Mr. Joseph Harisson, Jr., submitted for inspection the drawings of a cast iron bridge erected by himself across the river Neva, at St. Petersburg, Russia, of seven spans, 156 feet, being the largest. He says: "This bridge was thrown open to public use in 1850, and has undergone the extreme changes of temperature incident to a latitude nearly as high as 60° north, and I have heard no complaint or misgivings growing out of the fact of its being made of cast iron." The cost of building this bridge will be as follows: Cast iron bridge, $110,000; masonry, piers, etc., $190,000—total,

$300 000. From which deduct $100,000 to be paid by Passenger Railroad, will leave the sum of $200,000 to be provided for by the city.—*Philadelphia Ledger.*

Journal of Railroad Law.

TRANSPORTATION OF PLAINTIFFS' CAR OVER DEFENDANTS' ROAD. LIABILITY OF DEFENDANTS FOR, AS COMMON CARRIERS.

The increase of railroad business, the number of chartered companies, and the continuous lines of railroad through the different States, render mutual assistance and accommodation a matter not only of importance but of necessity. It is a common occurrence for one company to take one or more cars of another road connecting with it over its own track, and receiving therefor a proper compensation. In cases of this kind, it becomes a matter of importance to understand the nature and extent of the liability of the company for the safe conveyance of the car over its road. Are they held to the strict liability which the rule of law applies to common carriers? Does the acts of God, or the public enemies, constitute the only defences that they make to an action against them for damages?

It has been held where a party merely tows a boat, furnishing nothing but the motive power, and exercising no control over it, that he is not liable as a common carrier; and in the case of the Pennsylvania Railroad Company *vs.* The New Jersey Railroad Company, decided in the Supreme Court of the State of New Jersey, and which we are now to consider, the defendants attempted to draw this analogy, but the Court decided against them, holding that the cases were not similar.

The plaintiffs in this case brought their action to enforce compensation for damages received by the plaintiffs in the destruction of a car, which, in process of transportation over the defendants road, had been thrown from the track.

The defence was that a special contract had been entered into between the parties, by their agents, by which the car was to be carried at the risk of the plaintiffs.

The case was tried at the Essex Circuit, and a verdict rendered for the plaintiffs for $2,534.60 damages. From this judgment the defendant appealed to the Supreme Court, asking a new trial upon the grounds specified in the opinion of the Court, which opinion was as follows:

POTTS, J.—The first ground relied on for a new trial, is, that the special contract alleged was clearly established by the weight of evidence; and if this is so, the verdict undoubtedly should have been for the defendants.

The contract, whatever it was, was made in May, 1850, between Woodruff, as agent of the defendants, and Wasson, as agent of the plaintiffs. The cause was tried in January, 1856, nearly six years afterwards; and, as the alleged contract rested in parol, the jury had to consider how far it was probable the lapse of time had added to the uncertainty of the testimony adduced. This consideration naturally weighed most strongly against the defendants, because the *onus* was upon them to establish the special contract they set up by way of defence.

Where a common carrier undertakes to transport an article in his line of business, the legal presumption is that he does it subject to his common law liability. And that this presumption remains until it is overcome by positive proof of a special agreement. Now in this case, Woodruff and Wasson, the immediate parties to the transaction, are directly in conflict. Woodruff swears that he told Wasson the car was to go at his (Wasson's) risk, and that Wasson assented to it; while Wasson, as expressly and positively, swears that he never made any such contract as that it should be carried at the risk of the plaintiffs. It is true Mr. Counsellor testifies that he was present at a part of a conversation between Wasson and Woodruff, in which he heard the latter say to the former, that the company would take no responsibility at all; and heard Wasson reply, that he thought there was no risk—that he was going with the car, and was willing to run the risk; but what was said after this, he does not know. And it is also true that Mr. Woodruff produced a written memorandum, which he said was made by himself at the time, expressing that the car was to go at the risk of the party applying to have it transported. But some doubt was thrown over Mr. Woodruff's testimony as to the time when it was made, the memorandum being dated the 9th of May—while from Mr. Jackson's letter, informing the plaintiffs of the injury sustained by the car, it would appear that the accident occurred on the 15th. This was the only *direct* testimony in relation to the contract. And the jury who saw the witnesses, and heard the whole evidence, having weighed and come to the conclusion that it was not conclusive against the plaintiffs, I do not think we ought to disturb their verdict on that ground. It was the fault of the defendants if they meant to make a special contract, that they did not put it in a more definite and certain shape.

The point was incidentally made upon the argument, that this was not a case of *carrying* at all, but was analogous to that of towing a boat upon a water navigation, where the party supplying the motive power does not receive the boat into their custody, or exercise any control over it other than such as results from the act of towing; in which case it has been held that the common law liability of carriers does not attach. This doctrine has also been denied or doubted. But, however the rule may be in cases of towing boats under these circumstances, the analogy does not hold good in the present case. Here the defendants received the car to take over their road, and had exclusive charge of it, though they took it on its own trucks.

In the second place, it is argued that the court below erred in instructing the jury, that though the plaintiffs or their agents made misrepresentations to the defendants of the character and measurement of the car to be transported, yet that if such misrepresentations related to matters which might have been ascertained by the defendants by measurement and examination, that such misrepresentations cannot be held to be a deception. It appeared in evidence that Wasson had stated to the employees of the New Jersey road that the gauge of this car was one and a-half inches narrower than the road, whereas, in fact, it was two inches narrower; and also, that Cumming's cars, which had been taken over the road were of the same gauge as this, whereas the plaintiff's car had a narrower tread than Cumming's, amounting to half an inch on each wheel, making an inch difference in the tread. And it is alleged that it was these misrepresentations of Wasson which induced the defendants to take the car on its own trucks, and which occasioned its running off the road.

But it is clear that if the agents of the defendants had measured the gauge and tread of the car before putting it on the track, or examined it when on, they would have discovered the precise extent of both gauge and tread. They were, so to say, deceived with their eyes open. The facts were patent—discoverable by inspection, or by measurement; and the court said in substance, that if this was so, it was their own fault if they were deceived. In this there was no error.

When an article is delivered to a common carrier for transportation, he must exercise his own judgment as to the mode of carrying it, and cannot shelter himself from the consequences of his common law liability by setting up misrepresentations, unless they respect matters which are *latent* in their character.

As to the third ground relied on, to wit that it did not appear, that the car was the property of the plaintiff at the time, I think the evidence was sufficient to warrant the verdict.

The judgment of the court below was, therefore, affirmed.

Panama Railroad.

The report of Senor Gutierez, Minister of Finance of the Granadian Confederation, presented to Congress at Bogota, on the 1st of February this year, contains the following passage relative to the Panama Railroad:

The National Treasury is a participant in the profits of this undertaking, in conformity with the existing contract, and in virtue of it our Minister near the North American Union has made and is taking the necessary steps for the liquidation and recovery of said profits; for although the company has successively paid a part of them in past years, the method in which they deduced them deprived the Treasury of the complete amount that really belonged to it. For this reason, and in virtue of instructions given to the Attorney-General of the nation, the necessary suit was commenced before the Supreme Court for the settlement of the disputed point; but lately the executive power has learned with much satisfaction, through the reports of the said Minister, that the company is disposed to settle the matter without legal intervention, acknowledging the rights that the government possesses in the said undertaking, which up to the present time has produced on an average $19,000 a year. The accounts for 1859 have not been received yet, and for this reason it is impossible to include them in the estimate for last year. An extract of the receipts, expenses, profits and dividends of this inter-oceanic works from 1852, when the road was opened, to December, 1858, is presented in the adjoined table, which has been formed from the accounts rendered by the company to Minister of the Confederation, and which he has forwarded to the executive power. The following is the statement referred to:

Gross profits of the Panama R. R. from 1852 to December, 1858		$6,334,320
General expenses and depreciation of material	$2,905,882	
Dividends	2,786,240	
New Granadian proportion	83,156	
Do. 5 per cent. on mails	30,000	
Total disbursement	$5,805,278	
Bal. on hand Dec. 31, 1858	529,041	
		6,334,320

In addition to the $83,156 received as per centage on the dividends by New Granada, the table shows a further sum of $37,998 is claimed by the government, which amount is the subject of the arbitration referred to.

New York State Banks.

The following is a summary of the quarterly statement of the banks of this State, showing their condition on Saturday, the 31st of May last. From a comparison of the figures with those of the previous statement, the following changes wil be noted:—

Discounts, increase	$3,326,231
Specie, do.	3,698,983
Circulation, decrease	518,347
Deposits, increase	7,780,478
Capital, decrease	279,902

SUMMARY OF THE CONDITION OF THE NEW YORK STATE BANKS.

Resources.	Dec. 10.	March 31.
Loans & disc'ts.	$191,962,617	195,288,848
Overdrafts, $8 &	358,798	346,969
Due from banks	13,594,249	14,379,709
Due from directors	7,340,051	7,440,526
Due fr. brokers.	4,704,847	3,838,783
Real estate, $10,000 and	8,735,526	10,000 & 8,751,423
Specie	20,921,545	24,620,528
Cash items	17,376,759	21,002,939
Stocks and promissory notes,	26,897,874	28,228,850
Bonds and mortgages	8,029,917	7,737,514
Bills of solvent banks	2,261,723	2,247,546
Bills of suspended banks, $72 &	1,418	122 & 1,195
Loss & expense account.	1,953,740	1,274,560
Add for cents	988	973
Total	$291,085,154	$303,882,054
Liabilities.		
Capital	$111,441,320	$111,161,418
Circulation	29,959,506	29,441,159
Profits	13,738,012	12,630,829
Due banks	28,807,249	35,626,768
Due individuals and corporations other than banks	1,203,330	1,208,358
Due Treasurer of State	1,969,880	2,201,535
Due depositors on demand.	102,109,393	109,889,871
Amount due not included under either the above heads	1,855,947	1,718,626
Add for cents	517	490
Total	$291,085,154	$303,882,054

Three hundred and five banks reported, including the Bank of Corning and Onondaga County Bank (which two did not report), supposed to be winding up. H. J. Messenger's Bank, Marathon, Cortland county, has gone into operation since 31st of March; and since making its report for 31st March, the Bank of Central New York, Utica, has been placed in the hands of a receiver, Joseph Benedict, Esq., Utica.

Hoboken Railroad.

We are informed that Mr. Edwin Stevens is perfecting his arrangements for constructing his railroad from Hoboken to Newark, and it is believed that work will be commenced at the Hackensack river within a week or two. The lumber for the bridge over the river has been purchased, and is now on its way to that point. A tract of land has been purchased beyond the Hackensack near the mouth of the Bergen Tunnel, whence dirt will be conveyed to form the bed of the road across the Meadows. Whether the enterprise will or will not encounter embarrassment, as has been naturally expected, remains to be seen.—*Trenton Gazette.*

Harrisburg Car Works.

The Harrisburg Car Company, who fill orders for cast and wrought iron work, are furnishing a large proportion of the iron work for the new round house and shops of the Pennsylvania Railroad Company, which are now in progress of erection on the west side of the railroad track, exactly opposite the Car Company's spacious and well-arranged shops.

The round house is 280 feet in diamater, with a turn-table in the centre 54 feet in diameter, and forty-four diverging tracks for locomotives.

In addition to the varied and numerous castings for the Pennsylvania Railroad Company, the Car Company have also recently supplied wrought iron work for the Pennsylvania Canal.

Among the cars under way in the Harrisburg Car Company's shops, are passenger and coal cars for the Northern Central Railroad Company. A few year's ago, when the Harrisburg Car Company's shops were erected, they seemed quite outside of the town. Meanwhile, however, the extension of Harrisburg has been *northward*, till now the vicinity of the Car Works is the liveliest scene of improvement and of progress, visible in the growing capital city of this State.—*U. S. R. R. & Min. Reg.*

The Public Debt of Virginia.

The following is the statement of the Auditor of Virginia in relation to the finances of the State, communicated to Messrs. Peters, Campbell & Co., of this city, in reply to inquiries made by them on the subject:

AUDITOR'S OFFICE, RICHMOND, VA., April 30, 1860.

Your favor of the 26th inst. has been received, and in part compliance with your request, I send you a copy of my last biennial report, and call your attention to pages 77, 78 and 79, where you will find a statement showing the actual condition of the public debt on the 1st day of October, 1859.

All the primary or actual debt of the State, held by others than the Commissioners of the Sinking Fund, was on that day, $26,106,659.43, but for *taxing purposes*, the debt includes not only $1,261,843 of the old debt, actually redeemed and cancelled, but $1,083,657.20 of the new debt, purchased and held by the Commissioner of the Sinking Fund, making $31,452,159.63, on which 7 per cent. is annually raised to pay the interest, and one per cent. Sinking Fund, required by the Constitution to redeem and cancel the debt in 34 years.

The actual debt on the first day of October, 1859, may therefore be put down at		$29,106,659 43
Appropriations made prior to the 1st of October, 1859, which on that day had not been called for and funded, amounting to $2,970,417.37—of this amount it is possible there will be called for and funded	$2,500,000	
The last Legislature appropr'ted to the James River and Kanawha Canal	500,000	
Rivanna Navigation Co.	60,000	
Alexandria, Loudoun & Hampshire R. R. Co.	660,000	
Manassas Gap R. R. Co.	350,000	
Covington and Ohio R.R. Co. (in all the years 1860-'61-'62)	2,500,000	
Norfolk and Petersburg R. R. Co.	300,000	
Danville Extension	350,000	
Armory	500,000	
Virg'a Central R. R. Co.	600,000	
All turnpike roads, (actual amount not ascertained,) say	200,000	
		8,520,000 00
Tot. present and prospective debt.		$37,626,659 43

The State has guaranteed the bonds of certain corporations, amounting to $3,898,500, for the details of which see Second Auditor's Report, Doc. No. 8, page 25. The interest on those of the James River and Kanawha Canal and Chesapeake and Ohio Canal, has been paid by the State for several years, and a bill has been passed by the Legislature to issue the bonds of the State in lieu of the guaranteed bonds of the James River and Kanawha Canal, which, without increasing the State's liability, and without increasing the annual charge upon the Treasury beyond the one per cent. required by the Constitution, will add to the *direct* debt of the State the sum of

$2,260,000 00	
Total present and prospective debt brought forward	37,626,659 43
Making a total direct debt of.	$39,886,659 43

There is in addition to this amount $500,000 bonds of the Chesapeake and Ohio Canal, guaranteed by the State, on which she has paid, and will continue to pay, the interest. All the other guarantees in the table referred to are merely nominal, as the principals are amply able to pay, and must continue able, unless the inhabitants of the cities, in their private capacity, shall all prove insolvent, which is not to be presumed.

Then bring forward the entire debt existing on October 1, 1859		$29,106,659 43
Add all former and subsequent appropriations	8,520,000 00	
Add, also, bonds of James River and Kanawha Canal, guaranteed and authorized to be funded	2,260,000 00	
Total		$39,886,659 43
Add the only remaining liability, viz: the guaranteed bonds of the Chesapeake and Ohio Canal	500,000 00	
Total of all debts and liabilities		$40,386,659 43

It will be observed, also, by reference to page 392 of my report, that less than 4 per cent. of the value of the property in the Commonwealth will pay off the entire debt and liabilities of the State. Besides this solid source, I refer you to page 59 of the Second Auditor's Report, which shows the Commonwealth possesses investments (without estimating anything for investments to be made of the recent appropriations) amounting to $35,357,469.82, of which $10,057,540.06—yielding return to the State of 7 per cent. per annum—are, on that account, put down as "productive."

Thus it will be seen that, *against a debt of forty millions, the State has investments of thirty five millions, ten of which are, and will continue to be, productive*, with property, which, if equally divided amongst every man, woman and child in the Commonwealth, would give to each $1,050; and property on the value of which 4 per cent. would pay off the State's entire debt and liabilities. Taken in connection with the proverbial honor of her agents and representatives, it is a little strange that a suspicion of the credit of her securities for permanent investment should exist. It cannot exist in any well-informed minds, and I trust you will be able to correct any erroneous impressions which may have prevailed.

J. M. BURNETT, *Auditor.*

Penn Haven and White Haven Railroad.

At a meeting of the stockholders of the Penn Haven and White Haven Railroad at Mauch Chunk, the following officers were elected: Directors, A. Packer, (President,) W. H. Gatzmer, Robert Lockhart, R. F. Stockton, R. H. Sayre, and John N. Hutchinson, (Secretary and Treasurer.)

It is now ascertained to a certainty that this important road will be constructed with as little delay as possible. It will be the last link of some eighteen miles of the nearest railroad route between Philadelphia and also between New York and the Wyoming Valley. The company, under the supplement to its charter, passed at the last session of the Legislature, may purchase any existing railroad along the route, or start from any point along the Lehigh, within Carbon County, to White Haven.—*Mauch Chunk Gazette, May* 10.

Finances of Connecticut.

The message of the Governor of Connecticut gives the receipts into the Treasury of the State for the year ending April 1, as follows:

For dividends on bank stocks	$26,470 00
For taxes from towns	117,686 04
Do. railroads	18,420 85
Do. savings banks	44,157 51
Do. stocks of non-residents	10,765 30
From other sources	21,954 86
For bills payable	50,000 00
Total	$302,160 00

The expenditures were:

State expenses and int'st.	$222,270 95	
Bills payable	65,000 00	
		287,270 95
Cash in Treasury		$14,889 65

The expenses of the year are $19,934 38 less those of the preceding year. The indebtedness of the State, after deducting the amount in the Treasury, and $968 31 due from the towns, is $34,142 04.

There are 73 banks in the State, with an aggregate capital of $21,626,167

A circulation of	7,703,996
Deposits amounting to	5,463,540
Specie amounting to	950,138
Specie funds deposited in Boston and New York for the redemption of their bills	2,935,054

The whole length of railroads built within the State is 602 miles, constructed at a cost of $29,831,532 04, of which $18,727,717 31 has been paid in. The gross income has been $3,527,903 79, which is an increase of $409,921 64. The net income has been $1,221,797 51, or 4 per cent. on the cost, showing an increase of $175,392 59.

Buffalo Street Railroads.

The construction of two or three street railroads in this city is now to all appearance a fixed fact. The franchise for the Niagara and Main street roads has been granted by the Council and accepted by the grantees, and we learn that it is expected to go on immediately with their construction. The Common Council have permitted Mr. Beers, the patentee of a new form of rail, to lay down a track on Exchange street at the corner of Washington, to test the advantages of that peculiar form of rail. The appearance of the work, as completed yesterday, was more in accordance with our ideas of a perfect rail, than anything we have seen elsewhere. The track forms no obstruction to the passage of ordinary vehicles, the rail itself is continuous and presents no jolts at the ends, and the entire structure is iron, leaving no wooden ties or string pieces beneath the ground to rot and thus necessitate the frequent reconstruction of the road. There seems to be no reason why the rail once laid down should not stay *in situ* until worn out. The rail is of cast iron and weighs 75 lbs. to the yard. We have been furnished the following figures of the relative cost of the two forms of rail:

THE WOODEN OR PHILADELPHIA PLAN.

First cost, $8,000—interest for 12½ years.	$15,000
Relay at 5 years, $6,000—interest for 7½ years	9,150
Relay at 10 years, $6,000—interest for 2½ years	7,050
Current repairs, $200 yearly—interest for 6 years	3,550
Total	$34,700

THE IRON PLAN.

First cost, $8,000—interest for 12½ years.	$15,000
Yearly repairs, $50—interest for 6 years..	887
Total	$15,887

This estimate gives an expense of $15,887 or $1,271 per year for the iron plan, and $34,700 or $2,776 per year for the wooden plan—saving by the adoption of the former, $18,813 in twelve and a half years, or $45,150 in thirty years, at which time the charter expires.

One advantage of the iron plan is that the rail will be a home manufacture, cast in Buffalo furnaces. Of course this is a matter to be decided by the companies, with a view to their own interests. If they have the same faith in the iron plan that we have from the casual examination we have given it, they will adopt it. The experimental bit of road laid down on Exchange street, will soon furnish evidence of its durability under the constant wear and tear of heavy carriages passing over it.—*Buffalo Com. Adv.*

The Great Eastern.

There appears to be no doubt whatever that the great ship will be ready to try its powers on the Atlantic by the latter end of May. The contracts for the works necessary to fit the ship for sea have been taken, and they are being prosecuted with the utmost vigor. Mr. SCOTT RUSSELL has now nothing whatever to do with the ship; his contracts have come to an end, and even the interminable arbitration upon the differences between the company and himself have, it is understood, been brought to a close by sheer weariness of all the parties; and something like a compromise of all matters in dispute has been, or will probably shortly be, agreed upon on both sides. The works necessary to be completed before the start for America are mainly those which are required to be performed by the Board of Trade before the grant of the necessary certificate under the Passengers' Act. But, in order that nothing should be wanting to make the *Great Eastern* as perfect and as complete as possible in every department, a most careful examination of the machinery has been made by Messrs. PENN and FIELD, and the hull and fittings have been most carefully looked into by eminent ship-surveyors. The result of all this examination has been to show how greatly exaggerated were all those descriptions of her imperfect state which many persons, from various motives, had circulated with respect to this magnificent ship. Every suggestion made by "competent" parties has been adopted by the new Board of Directors, and the whole expense of the works, including those that are actually necessary, and others which may be considered as improvements, will not exceed £20,000. The works which have been taken in hand include the building of new store-rooms on board, some additional stanchions to support the cargo deck, some alterations in the davits for hanging the boats, and some additional supports to the sides of the coal bunkers. One rather heavy affair is the construction of a tunnel for the passage of the crew, engineers and others, through the coal bunkers. This has involved a considerable amount of labor, and 2,500 tons of coal have had to be removed in order to get at the work. These tunnels will be fitted with water-tight doors at each of the compartments, and will be useful for giving increased ventilation, and afford facilities for testing the temperature of the coal in the "bunkers"—an important consideration, when it is considered that some 10,000 tons of coal are stowed away in these parts of the ship. Some alterations are also to be made in the packing of the iron masts, the india rubber hitherto used being about to be replaced by hornbeam, or some less elastic substance. In addition to the squadron of twenty small boats, with which the ship is at present provided, there will be two others of unusually large size, equal in fact to moderate sized schooners, their dimensions being 50 feet in length by 13 in width. Their saloons and cabins, which were unfinished when the ship left the Thames, are also to be completed before the Atlantic trip. The planking of the deck will remain unchanged, though admitted on all hands to be a piece of notoriously bad workmanship upon very bad timber. In addition to the improvements mentioned, there are a number of small details required to be attended to in the engines and machinery.

The Board have appointed Mr. THOMAS BOLD, one of the late directors, to the post of General Manager. No appointment of Captain of the ship has yet been made, but the general opinion appears to be that Capt. VINEHALL, Superintendent of the Mediterranean Steam Navigation Company, will be appointed.—*London Observer.*

The Loughridge Brake in the Northwest.

The following is the official report of the trial of this brake on the Chicago and Milwaukee road. It will be observed that it covers all the strong meritorious points so necessary to the practical operation of an invention so important:

TREMONT HOUSE, Chicago, April 7, 1860.

WM. LOUGHRIDGE, Esq.—Dear Sir: In behalf of a committee who yesterday witnessed a practical test of the utility of your "Graduating Car Brake," I would state that several experiments were made with a train of three cars upon the Chicago and Milwaukee railroad, and a favorable use of the hand brake was made upon which our calculations are based, and we are of opinion that your brake has a clear advantage of 25 per cent. over the hand brake, in point of distance in which a train can be stopped. Your brake also possesses material advantages over the hand brake, from the fact that the engineer has at *all times* the power of an immediate application of the brakes, in cases of emergency, when a few seconds of time may save life and property. Very truly,

P. A. HALL, Chairman.

Desjardins Bridge.

The President, C. J. Bridges, and the Chief Engineer, G. Lowe Reid, accompanied by several of the directors of the Great Western Railway Co., and a number of citizens, recently visited the new bridge, which has just been erected over the Desjardins Canal, for the purpose of testing its stability and trustworthiness. The test was of the most satisfactory and unmistakable character, leaving no room for doubt that the bridge is as strong as it is possible to make such a structure, and capable of bearing a weight six times heavier than possibly can be put upon it at one time. Two of the heaviest freight engines in the company's service, were selected to test the bridge. These engines, with their tenders, fully equipped, weigh upward of one hundred tons, and though the bearings of the ends of the bridge were only temporarily adjusted, the deflection was only *three tenths of an inch*. When everything is properly finished up, in ordinary trains there will be no perceptible deflection in the bridge at all, such is its immense strength. The following is a general description of it:

The bridge consists of two tubular girders of wrought iron—the line of railways passing between them—supported by wrought iron floor-beams, which rest on the bottom flanges of the girder. Its clear span is 66 feet. The girders are 9 feet in height over the turn-table, 3½ feet at their extremities, and 2 feet in width, having double webs of solid plates connecting the top and bottom flanges. The weight of the girders and floor-beams is 62½ tons, that of the turn-table and gearing 30 tons, and the flooring, etc., 15 tons, making in all 107½ tons. The flooring is composed of 3½ inch oak plank, laid crosswise, in preference to iron which is generally used; this is brought up flush with the rail, so that if a train should happen to get off the track while on the bridge there would be no fall from the rail to the floor, which is amply strong enough to support the weight of an engine or train. The heaviest load that can ever be brought to bear upon the bridge at any one time, will only strain the girders to the extent of 3½ tons per square inch, while their breaking strain is 20 tons per square inch, or six times the amount of pressure which it is possible to bring upon them. The cost of the structure will be nearly $20,000. (?) The iron work was manufactured by the Messrs. Fairbairn & Son, of Manchester, England, who sent out with it one of their most trustworthy foremen, Mr. Lambert, to superintend its putting together.—*Spectator, Hamilton, C. W.*

Finances of the U. S.

The following is the official statement of the receipts and expenditures of the United States, for the quarter ending March 31, 1860, exclusive of Trust Funds and Treasury Notes funded:

RECEIPTS.

From customs	$14,962,783 68
From sales of public lands	505,591 83
From Treasury notes issued per act of Dec. 23, 1857	5,588,200 00
From loan per act of June 14, 1858	1,110,000 00
From incidental and miscellaneous sources	248,915 72
Total	$22,415,491 23

EXPENDITURES.

Civil, foreign intercourse, and miscellaneous		$11,497,474 38
Interior (pensions and Indian)		1,095,517 41
War		3,086,975 57
Navy		2,444,409 19
Payment to creditors of Texas	$4,631 48	
Interest on public debt, including Treasury notes	108,047 67	
Payment of Treasury notes, per act of Dec. 23, 1857	2,190,300 00	
Re-imbursement of Tr. notes, issued prior to Dec. 1857	150 00	
		2,303,129 15
Total		$20,377,502 70

Virginia State Loan.

The Board of Public Works of Virginia will receive proposals any time prior to the first of September next, for a 6 per cent. loan to the amount of $6,000,000 payable in such monthly instalments as may be required, not exceeding $200,000 per month, said loan to be redeemable in thirty-four years, interest payable semi-annually on the 1st of January and 1st of July of each year, at the treasury of the State in Richmond.

Proposals are also invited for the same loan at 4½ or 5 per cent. Federal, sterling, or other appropriate bonds will be issued for the loan, as paid in at the option of the lender,

By the Constitution of the State, and laws in pursuance thereof, a sinking fund is established for the punctual paymemt of the interest semi-annually, and the redemption of the principal in thirty-four years of the issue of the bonds. These provisions of law, the large and increasing taxable resources of the State, and tax laws, furnish the strongest possible assurance of the safety and value of the loan. Sealed proposals to be addressed to the "Board of Public Works, Richmond, Va.," and indorsed "State Loan."

Texas and New Orleans Railroad.

We had the pleasure of meeting Col. A. M. Gentry, on Saturday, just returned from Austin, with $180,000 of the State loan in his hands, for the Texas and New Orleans road. The road will be in a condition to ask for $60,000 more in a few days, if not already. It is going ahead with all the rapidity which enterprise and money can secure.—*Houston Telegraph, May 8.*

Railroad Earnings.

The earnings and expenses of the Cleveland and Mahoning Railroad for April were as follows:

	1859.	1860.
Gross earnings	$20,125 01	$28,782 00
Expenses	8,887 84	9,478 05
Net earnings	$11,237 17	$19,303 95
Increase net earnings		$8,066 48

The following are the earnings of the Great Western Railway for the week ending May 4, 1860:

Passengers	$20,296 11
Freight and live stock	19,383 58
Mails and sundries	1,492 43
Total	$41,172 12
Corresponding week of last year	35,655 01
Increase	$5,517 11

The following are the earnings by the Chicago, Burlington and Quincy Railroad for the first seven working days in May—

	1859.	1860.
Freight	$21,242 99	$42,362 00
Passengers	11,844 23	11,298 15
Totals	$33,087 22	$53,660 15
Increase		20,572 93

The revenue of the Baltimore and Ohio Railroad for April was as follows:

MAIN STEM.

From Passengers	$48,573 64	
" Tonnage	287,089 85	
" Express	2,581 12	
" Mails	7,833 34	
		$346,077 95

WASHINGTON BRANCH.

From Passengers	$29,381 85	
" Tonnage	7,256 02	
" Express	1,025 00	
" Mails	1,000 00	
		38,762 87

N. W. VIRGINIA BRANCH.

From Passengers	$2,971 05	
" Tonnage	17,749 82	
" Mails	866 67	
		21,587 54
Total earnings		$406,428 36

Summary of Revenue for April, 1859 and 1860.

	1859.	1860.
Main stem	$302,311 53	$346,077 95
Washington Branch	33,910 69	38,762 87
N. W. Virginia Railroad	24,538 93	21,587 54
Totals	$360,751 15	$406,428 36

—Showing a net increase of $45,667 21.

The fiscal year of the Company commenced with October. The revenue for the first seven months of the present year compares with that for the same months of the previous year as follows:

	1859-'60.	1858-'9.
October	$416,929 61	$391,395 10
November	431,287 56	380,879 75
December	355,662 13	337,202 27
January	282,070 64	314,201 09
February	332,743 77	303,631 78
March	425,487 08	400,984 68
April	406,428 36	360,751 15
	$2,650,609 15	2,489,045 80
	2,489,045 80	
Increase present year	$161,563 35	

The earnings of the Hannibal and St. Joseph Railroad for April, 1860, were $130,308 00
1859 82,604 81
Increase $47,703 19

The receipts of the Grand Trunk Railway of Canada, for the week ending April 28th, 1860, were $66,754 65
Corresponding week, 1859 46,222 87
Increase $20,531 77
Total traffic from July 1, 1859 $2,407,617 03
Do. for same period last y.. 1,900,642 69
Increase $506,974 34

The earnings of the Pittsburg, Fort Wayne and Chicago Railroad Company during the month of April, compared with the same period of last year, were:

	1860.	1859.
From freight	$99,002 55	$54,372 47
" passengers	62,150 80	68,239 65
" express	2,500 00	8,250 00
" mails	7,825 00	7,825 00
" rent of road	7,083 33	5,500 00
" miscellaneous	213 42	468 58
Total	$178,775 01	$139,655 70
Increase		$39,119 40
Earnings Jan. 1 to May 1.	$663,379 92	$557,180 12
Increase		$106,199 80

The April receipts of the Housatonic Railroad were:—

1860 $23,125 12
1859 22,363 21
Increase $861 91

The earnings of the Macon and Western Railroad Co. for April, 1860, were:

Passengers $9,311 45
Freight 18,648 76
Mail 838 50
Total $28,798 71
April, 1859 24,681 84
Increase $4,116 87

The following is a comparative statement of earnings and expenses of the Buffalo and State Line Railroad Company for the month of April, 1859 and 1860:

EARNINGS.

	1859.	1860.
Passengers	$36,121 98	$33,952 55
Freight	27,147 21	43,405 40
Other sources	1,624 50	1,880 00
Total	$64,893 69	$79,237 95
Increase		$14,455 26

EXPENSES.

Maintaining road	$15,247 88	$14,749 61
Repairs of machinery	4,064 75	6,372 10
Operating	15,187 90	13,605 73
Total	$34,500 53	$34,727 45
Increase		$226 91

The earnings of the Norwich and Worcester Railroad for April, 1859 and 1860 were:

1859.	B. & N.Y. Local,	etc. Mails,	etc.	Total.
Pass'gers	$1,938.84	8,139.41	.....	10,078.25
Freight	1,981.27	14,013.32	1,166.04	17,160.63
Total				$27,238.88
1860.				
Pass'gers	$1,656.79	8,167.40	.....	$9,824.19
Freight	1,246.71	15,335.57	1,202.00	17,784.28
Total				$27,608.47
Gain over 1859				$369 59

The earnings of the Central Railroad Company of New Jersey, for the months of April. 1860, were $98,988 96
Same month last year 81,824 95
Increase, 21 per cent. $17,164 01

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, May 19, 1860.

The Share Market.

The share and bond market still show a very strong tendency to a further improvement upon the recent very great advance. With regard to many securities, the scale seems to have suddenly fallen from the public eye, and values are now seen where only a few months since all was worthless. If the recent advance be evidence of increased values, the holders of our railroad securities are worth hundreds of millions, almost, more than they were a few months ago. Only a short time since, the securities of the Erie Railroad were selling, in the aggregate, at only about 35 per cent. of their par value. The recent advance in its shares has been over 400 per cent. It has been nearly 100 per cent. on the unsecured bonds. A great improvement has also taken place in the higher securities.

A similar advance, but not so excessive, has taken place in securities of other roads, particularly in the West, which have for a long time been under a cloud. Chicago, Burlington and Quincy shares have, within three months, gone from 43 to 73, and will probably touch a much higher figure. A very large advance has taken place in the two Michigan roads, the Cleveland and Toledo, Chicago and Rock Island, and others. A portion of the advance is due undoubtedly to a better understanding of the real value of the securities, to an increased traffic, and to the fact that many of the companies, formerly embarrassed, are getting on to firm ground, when something like uniformity in the results of their operations for the future, may be expected. It has been the want of this uniformity—the payment of excessive dividends one year and nothing for years afterwards, and the constant alternatives between a plethoric and empty purse, that have tended more than anything else to shake confidence in railroad property. But all evils of the kind cure themselves in the long run. A great progress is already made in this respect, and in a year or two more will give a permanent value to many securities that have fluctuated through a range of 60 or 70 per cent.

New Jersey Central Railroad.

This company have directed a survey of a route from Elizabeth to Jersey City, over which they intend to extend their road. The point at which the road will cross Newark Bay is near the Light House, opposite Bergen Point. The depot will be located in the southern part of Jersey City, and the cove, making in between Communipaw and Jersey City will be filled in.

Concord (N. H.) Railroad.

The total receipts of this road, in connection with the Manchester and Lawrence Railroad, for the year ending March 31, were $162,801.31; expenses, $210,856.74; balance, $251,944.57. Deducting taxes and rent, the net income of the two roads was $225,027.02, three-fifths of which, amounting to $135,016.21, goes to the Concord road. From this amount two 4 per cent. dividends were paid, amounting to $120,000, leaving a balance of $15,016.21.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 16th May, 1860, were as follows:

Baltimore and Ohio Railroad.

This company was chartered in Maryland and Virginia in 1827. The following are the dates at which the several sections of the road were opened for traffic:

22d May, 1830, Baltimore to Ellicott's Mills.
1st Dec., 1831, Ellicott's Mills to Frederick City.
1st April, 1832, Frederick City to Point of Rocks.
1st Dec., 1834, Point of Rocks to Harper's Ferry.
1st July, 1842, Harper's Ferry to Hancock.
5th Nov., 1842, Hancock to Cumberland.
9th June, 1851, Cumberland to Piedmont.
22d June, 1852, Piedmont to Fairmount.
24th Dec. 1852, Fairmount to Wheeling.

The Washington Branch Company was chartered on the 9th March, 1833, and the road completed to Bladensburg on the 20th July, 1835, and to Washington, 25th August, 1835.

New York and New Haven Railroad.

The annual meeting of this company was held at New Haven, Ct., on the 10th inst. According to the report, the earnings for the year ending March 31st, 1860, were $946,134.86; expenses, $548,727.53; leaving a balance for net earnings of $397,407.33; deducting the interest paid on the bonds, say $143,870.33, there would remain $253,537, equivalent to 8½ per cent. earned on the capital stock. The Directors remark:

That on the 29th of July last they declared a dividend to be paid on the 15th day of the following month, but that in consequence of an injunction being served upon the company, they were prevented from paying the proposed dividend; that the litigation in which the company has now been engaged for a period of nearly six years, arising out of the frauds of Robert Schuyler, amounting to $2,000,000, is still slowly progressing before the Courts, and that no definite opinion can now be given as to the termination of the same.

The difficulties and embarrassments environing the corporation in 1854, after the flight of Robert Schuyler having been mainly overcome or removed, and the company having no floating debt, with a road, together with all its appurtenances, in good order, and being benefitted by a largely increased and increasing business, that will earn and pay regular dividends, and, in addition, allow the management to have the utmost confidence that the road will earn and pay regular dividends, and, in addition, allow the accumulation of a proper surplus fund for contingencies.

The meeting then proceeded to ballot for Directors for the ensuing year, which resulted in the re-election of the present incumbents, as follows: Justus R. Bulkley, George N. Miller, Abraham R. Van Nest, George B. Carhart, Dennis Kimberly, John Bradley, John W. Leeds, Jonathan Godfrey, and Erastus C. Scranton.

The Directors subsequently re-elected Mr. J. R. Bulkley, as President; E. S. Abernethy, Secretary; and William Bement, Treasurer.

Lexington and Southern Kentucky R. R.

The last Legislature of Kentucky amended the charter of the Lexington and Danville Railroad Company, and the title of said company is now "Lexington and Southern Kentucky Railroad."

This amended charter gives to the county of Mercer the privilege of taxing herself to any amount, not exceeding $300,000, to extend said road through Mercer County in a southern direction, by way of Harrodsburg. The amount subscribed by Mercer County is not to be applied outside of the county, with the distinct understanding that Harrodsburg is to be made a point in the road. The Harrodsburg *Press* suggests that immediate action be taken by the friends of this enterprise, in order to have a vote at the August election for or against the appropriation. It also suggests the propriety of the friends of the enterprise holding a public meeting, in the court house in Harrodsburg, at an early day, and determine what sort of action had best be taken.

Troy and Boston Railroad.

For the year ending April 1st, 1860, the gross earnings of the Troy and Adams line of the Troy and Boston road (exclusive of the Troy and Bennington and Western Vermont roads) were $193,000; the net, $93,000.

Illinois Central Railroad.

The Illinois Central Company have already paid and provided for $1,250,000 of the Freeland Bonds, due 1st September, leaving $1,750,000 out. Under the pressure of the $5 call, the payments in full have been resumed, and now amount to 40,000 shares. The last advices from London lead to the expectation that a large amount of shares will be paid in full this month, and thus cancel $300,000 to $400,000 of the Freeland Bonds.

☞ By reference to an advertisement, in another column, of James P. Smith, Esq., *Trustee*, it will be seen that on Wednesday next, 23d inst., will be sold at auction the entire stock of Steam Engines, Turning Lathes, Planers, Boring Machines, Drill Presses, Steam Hammer, Patterns, etc., etc., comprising the entire outfit of the extensive Locomotive and Machine Manufacturing Works of the late firm of Smith & Perkins.

These works are situated in Alexandria, Va., immediately upon the river Potomac. The machinery and tools are suitable for manufacturing stationary, marine and locomotive engines; also iron machinery, passenger and freight cars, and all kinds of railroad work. The machinery is sufficient to work about 300 men. The sale is to commence at 10 A. M. As favorable an opportunity to purchase as this seldom occurs; and those who are desirous of bidding, will do well to be early in attendance.

Hudson River Railroad.

The following is a statement, from official sources, of the condition of the Hudson River Railroad Company:

Capital stock, 37,700 shares, $100 each		$3,770,000
DEBT.		
First mortgage bonds	$4,000,000	
Second " "	1,980,000	
Third " "	1,840,000	
Convertible	1,002,000	
		8,822,000
Total		$12,592,000

RECEIPTS.

Oct., 1857, to Sept. 30, 1858, inclusive.	$1,636,412
Oct., 1858, to Sept. 30, 1859, inclusive.	1,842,636
Oct., 1859, to Sept. 30, 1860, (part est.) Actual seven months	$1,276,419

	1859.	Estimated for 1860.	
May	$141,268	$156,000	
June	115,444	132,000	
July	125,304	140,000	
August	155,163	169,900	
Sept.	156,972	170,000	
			767,000
			2,043,419
Expenses year previous			1,079,000
Add increased expenses on increased business, after deducting the reduced cost of fuel, in consequence of one-third more of the service being performed by coal this year than last			61,000
Total			$1,140,000
			$903,000
Interest on funded and floating debt			640,000
Net			$263,000

—equal to 7 per cent. on the stock of $3,770,000.

The company are changing their wood engines into coal-burners as rapidly as possible. Next year at least 75 per cent. of the entire service will be performed by coal, with a corresponding reduction of expenses for fuel. It is stated that the cost of altering engines from wood to coal, in the most perfect manner, and at the same time renovating the engines most thoroughly, so as to make them equal to new ones, is charged to current transportation expenses.

Central New Jersey Railroad.

At the annual meeting of the stockholders of this company, held at Elizabethport, N. J., on the 7th inst., John T. Johnston, John C. Green, William E. Dodge, Adam Norrie, William S. Wetmore, Benjamin Williamson, John O. Sterns, Frederick T. Frelinghuysen and Henry D. Maxwell, were re-elected Directors of this company for the year next ensuing. And at a subsequent meeting of the Board of Directors, John T. Johnston, was unanimously re-elected President, and Samuel Knox, Secretary and Treasurer.

Sussex (N. J.) Railroad.

The following gentlemen have been elected directors of this road:

Aaron Peck, Martin Ryerson, Edward C. Moore John Rutherford, John R. Stuart, Samuel S. Smith, John Lynn, George M. Ryerson, John McCarter, Jr., Thomas N. McCarter, Samuel F. Headley.

Subsequently, at a meeting of the board, Mr. Aaron Peck was unanimously re-elected President, George H. Nelden, Secretary, and David Thompson, Treasurer.

New York and Harlem Railroad.

At the annual election of this company, on the 15th inst., the following gentlemen were unanimously elected Directors: Allen Campbell, Wm. C. Wetmore, Cornelius Vanderbilt, Daniel Drew, Francis W. Edmonds, Chas. W. Sandford, Horace F. Clark, John Alstyne, Horace Brooks, Albert Smith, Albert J. Akin, John Harper, A. B. Baylis.

Greenville and Columbia Railroad.

The following gentlemen have been elected Directors of this company for the ensuing year:

President, T. C. Perrin.

Directors, V. McBee, T. M. Cox, Hon. J. N. Whitner, J. P. Reed, Dr. J. F. Livingston, Charles Smith, Hon. J. B. O'Neall, Simeon Fair, Robert Stewart, John M. Allen, C. G. Memminger, Daniel Blake.

Evansville, Indianapolis and Cleveland Straight Line Railroad.

The following gentlemen comprise the new Board of Directors recently elected: John J. Chandler, John A. Reitz, William Brown, Edward Burtis, M. W. Foster, Vanderburg County. Alexander Leslie, Goodlet Morgan, Pike County. Wm. S. Turner, Daviess County. Samuel Hall, Gibson County. G. H. Roberts, Warwick County. E. S. Henkle, Greene County. Judge Roberts, of Newburg, was elected President; Wm. Brown, Vice-President; and William Baker, Secretary and Treasurer.

The Evansville *Journal* of 10th inst., says of this road:

It is not very probable that any immediate steps for its completion will be taken, still it is gratifying that the basis of operations has been transferred from Indianapolis to this city, and that the new board is one likely to arouse hopes that the road may yet be finished. The affairs of the company are not in a very flattering condition; but although lawsuits, almost without number, are still pending; it is very evident that those affairs are at their lowest ebb, and any change at all, must be for the better.

Many individuals on the line of the road who subscribed stock, but refused to pay on account

of having no confidence in the managers of the company, now express a willingness to pay up promptly when they are assured the proceeds will be applied to the completion of the road.

The new Board of Directors are sound business men, and we cordially anticipate that the present tangled condition of things will soon be unraveled, and we shall be able to learn just how matters stand. Then we may form some calculations as to the chances for the completion of the road, but not before.

Illinois Central Railroad.

The Fulton brings information that the London Committee of the Illinois Central Railroad Company had determined to resign at a meeting of the English stockholders, called at the London Tavern for the 3d. Mr. Satterthwaite, in receiving the late report of the New York Board, says:

"We have always advocated the absolute necessity of the company making calls on its stocks and reducing its interest charges, and we can only regret that a course of policy has been pursued in the management of the finances of the company by its English advisers, which in our opinion has seriously damaged the position of the stockholders. It will be noted that the Board rather abrutly terminates its relations with the London Committee. This Committee, it will be recollected, was appointed more than two years ago, for the special purpose of ascertaining the actual state of the company's accounts, and of preventing the creation of floating debt; its members were numerous, and different members took different views, but when money was wanted resort was had to the creation of floating debt, instead of making calls. We conceive it is undesirable to have two governing bodies, and can have no doubt that as practical inconvenience has resulted, the Committee have acted judiciously in deciding to resign at the meeting called for on Thursday, May 3, at the London Tavern."

Thomaston and Barnesville Railroad.

We learn that this road was sold under execution on the first Tuesday in May. It was purchased by a company of gentlemen of Upson County, for $30,000. The new company have elected Jas. M. Smith, President, and invited the old stockholders to take stock in the road on equal terms with the new proprietors, provided they do so previous to the 19th inst.

We hope under its new auspices, this road will become a permanent and prosperous institution.—*Macon Messenger, May 9.*

The International Bridge.

At the half-yearly meeting of the English shareholders of the Buffalo and Lake Huron Railway Company, held at the London Tavern, on the 28th ult., the subject of the proposed bridge across the Niagara River at Buffalo, received some attention. The Chairman of the English Board, Mr. Herman Grisewood, in the course of his remarks upon the affairs and prospects of the road, says:

With regard to the bridge at Buffalo, they had never relaxed their exertions, either here or in Canada, and Mr. Carter, their manager, had scarcely allowed a week to pass in which he had not an interview with influential persons on the subject. It now remains for the shareholders in Canada to form a company there for building the bridge, and then it could be carried out; but the great difficulty was the money. A bill had been introduced into the Canadian Legislature, and had passed the third reading in the Lower House, giving them three years more to commence the bridge.

Subsequently, in reply to a question from a shareholder, the Chairman said, they had every reason to believe they could build the bridge at Buffalo in two years, and that it would not come to more than £250,000.

The subject was frequently recurred to during the meeting, the shareholders interrupting other discussions with questions regarding it, and manifesting much interest in the project.

Alleghany Valley Railroad.

The extensions of this road to the Mouth of Mahoning, was never more apparent than at present. The facilities offered by this route to lumbermen, furnace men, and dealers up the Northern section, should open the eyes of Pittsburgers to earnest endeavors for its extension. The steamboat connection at Kittanning, above all bridges, which are a complete obstruction to navigation in high water, enables passengers and freight, leaving here at four o'clock P. M., to arrive at Emlenton at five o'clock next morning, and at Franklin by eleven o'clock, A. M. The extension of the road to Mahoning two or three hours more would be saved. As it is, the road appears to be doing a fine business. The cars are filled with passengers, and freight heavy. But true to the instincts, as would appear, of the councilmen of the city, manifested towards this road, it is prevented from working economically, although, after long and repeated application, they have finally granted the liberal privilege of laying the rails down to the canal, through an unfrequented street, where scarcely a dray or cart passes. It is burdened with impositions and penalties not exacted from any other road. For instance, no locomotive shall be employed in that part of the city, whilst from the high grade, horse power is expensive, just as dangerous, and subject to great delays. If councilmen would look at this matter as it really is, not two meetings would intervene before the restrictions would be removed, and locomotives admitted to the canal.—*Pittsburg Post.*

Hackensack and New York Railroad.

The contracts for grading the line of this road have been awarded to Thomas Cumming, Jr., and V. L. Lary, the latter having the lower, and the former the upper portion of the road. The work will be quite light, the branch road to Lodi, which is included in Mr. Cumming's section, being the heaviest. By the terms of the contracts the grading is to be ready for the track early in September. The rails which will be of American manufacture, weighing 35 lbs. to the yard, have already been contracted for. The laying of the rails will not be done by contract, but will be performed under the immediate direction and supervision of the engineer. We understand that the grading and track will not cost over $8,000 per mile. Active preparations are going forward for the immediate prosecution of the work, and it is expected that ground will be broke during the first part of next week.—*Hackensack Journal.*

New Orleans and Opelousas Railroad.

The Directors of this road have under way forty miles of it from Berwick's Bay to New Iberia. Between New Iberia and the town of Opelousas a large force is at work, and ten miles of road have been finished. The company expect to have the entire road from Berwick's Bay to Opelousas, a distance of 85 miles, finished and in operation by the fall of 1861. The third division of the road, from Opelousas directly west to the Sabine, is a distance of 93 miles. This the company will build, we understand, as soon as possible after completing the second division. It is expected that the railroad now rapidly building from Houston to the Sabine, will meet the Opelousas road at New Iberia in two years.—*Galveston News, 8th.*

York River Railroad.

Commissioners having been appointed to take contributions for the purpose of extending this road, it is presumed that active operations will soon be commenced.

The place of its terminus on the Rappahannock is not yet determined, but it is supposed it will stop near the head of Urbanna Creek, about one mile and a half from the Rappahannock river; it commands a very good entrance from the river, and with but little expense would admit ships of considerably tonnage. There is no doubt but it will cost the company one hundred and fifty thousand dollars less to stop this road here than to carry it to the Rappahannock at any other place on the river.—*Rural Southerner.*

Memphis River Railroad.

This company have concluded to build their road through the centre of the various counties between Memphis and the Ohio River, instead of on the overflowed lands, as originally designed. The following gentleman have been elected directors: William D. Ferguson, F. M. Copeland, Thomas James, A. Street, B. D. Nabors, E. A. Crandall, John Harding, William Cowan, A. Harris, Hiram Partee, S. W. Cochran, H. K. Mullens, E. R. Ray, J. Hickman and Jacob Corbitt. Colonel William D. Furguson was elected *President*, Dr. Allen Harris, *Vice-President*, and M. F Copeland, *Secretary* and *Treasurer*.

Vicksburg, Shreveport and Texas Railroad.

A letter written from Monroe gives the gratifying intelligence that the work on this road is going on prosperously. The correspondent writes: "Fifty men commenced yesterday on this end of the road, and the contractor informs me that he will have eighteen miles completed by the 1st of October. That the road will be finished by the 15th of October is now considered a fixed fact, unless a break should occur in the levees above De-Soto to retard the work."

Covington and Griffin Railroad.

A meeting of the friends of this enterprise was held in Covington on the 26th ult. Books were opened and $125,000 subscribed. Delegates were appointed to attend the convention of the stockholders of the Georgia road, and memorialize that body in its behalf.

Reading and Columbia Railroad.

A meeting of the directors of this company was held a few days ago in Lancaster. The engineer of the road presented his plans and a report, from which we learn that the length of the surveyed line, through Adamstown, Ephrata, Litiz, Manheim and Columbia is 43.3 miles, and the estimated cost, embracing grading, masonry, water stations, track, and all the appurtenances of a first class single track railroad, and five miles of siding track, is only $1,166,152 85. The grades over the south mountain which, previous to making the survey were adjudged to be of a formidable character, are fifty-two feet to the mile on the south slope and sixty-six feet to the mile on the north slope, descending to Reading. The engineer recommends that the approach to Reading should, for the last two miles, run alongside the Lebanon Valley Railroad, so as to connect with all the roads centering at Reading, where the Reading Railroad Company are about to construct a large and commodious depot.—*Phila. Inq.*

☞ We learn that John M. Grant Esq. has been promoted to the office of Secretary of the Grand Trunk Company, in the room of Sir Cusack P. Rooney, resigned. Mr. Grant, leaves for London in June. We congratulate him on his well merited promotion, and hope the future has many years of prosperity and happiness in store for him. —*Sherbrooke Leader.*

Iron Bridge.

The Pennsylvania Railroad Company have erected a new iron bridge over Eshleman's Creek, near Harrisburg. This bridge is fifty-five feet span, and the workmen commenced removing the old bridge in the morning, and had the new one completed, ready for the passage of the trains, before night. All business is suspended on this road on Sunday, except the construction of bridges, which, in the case of railroads, seems to be a work of necessity. The various places are got ready during the week, so that nothing remains to be done on

Sunday, when no trains are running, but to erect the spans and relay the track. The expedition with which this is done would be astonishing to novices in such matters.—*Phila. Inq.*

Mobile and Girard Railroad.

This company have received from the General Land Office at Washington, returns showing the amount of lands donated to that company by the act of Congress. It will be remembered that the act gave them alternate sections of land to the distance of six miles from the road on either side thereof, and, in the event that any sections or parts of sections, had been previously disposed of by the Government, they could go to the limit of fifteen miles. The calculation has been made at head-quarters, and the road is informed that it is entitled, under the act, to 347,000 acres of land. This, if sold at government price, would bring in round numbers $430,000. Much the largest proportion of it, however is worth a great deal more. There are thousands of acres lying in some of the richest valleys in Alabama, and on Mobile river, which must command from $5 to $20 per acre. This accession to its resources will materially improve the prospects of the road, and should cause an immediate appreciation in the value of the stock.—*Columbus (Ga.) Times.*

Knight & Von Kamecke,

CONSULTING Engineers and General Agents. Drawings of all kinds neatly and promptly executed. Office, No. 26½ Broadway, New York.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.,
New York, May 15, 1860.

THE ANNUAL MEETING of the Shareholders of the Illinois Central Railroad Company, for the ELECTION of DIRECTORS, and the transaction of any other business, will be held at the office of the Company, in the City of Chicago, on WEDNESDAY, May 30, 1860, at 10½ o'clock A. M.

The transfer books will be closed on the 24th May, and re-opened on the 2d June.

2t20 W. K. ACKERMAN, Sec'y.

AUCTION SALES.

AUCTION SALE

Of Locomotive Builders' and Machinists' Tools, IN ALEXANDRIA, VIRGINIA.

ON WEDNESDAY, MAY 23rd, 1860, commencing at 10 o'clock, A. M., (no postponement on account of weather,) will be sold the entire stock of STEAM ENGINES, TURNING LATHES, PLANERS, BORING MACHINES, DRILL PRESSES, STEAM HAMMER, PATTERNS, etc. etc., comprising the entire outfit of the extensive Locomotive and Machine Manufacturing Works of the late firm of SMITH & PERKINS.

Printed lists giving description of Machinery to be sold, with terms of sale, will be furnished on application by mail to

3t18 JAMES P. SMITH, Trustee.

CAST STEEL,

Of First Quality and Warranted.

BAR, TOOL, DRILL, AND DIE STEEL.
LOCOMOTIVE, CAR AND CARRIAGE CAST STEEL.
CAR SPRING STEEL,
Far superior to the ordinary kind.
FROG PLATES, POINTS.
Saw, File, Cutlery, Rake, Hoe, Axe and Plough Steel. Gun Metal. Wire and Machinery Steel.
ORDERS FILLED PROMPTLY AND AT LOW PRICES.

SALTUS & CO.,
45 Cliff st., New York.

STEEL, FILES, ETC.

R. GROVES & SONS,
SHEFFIELD, ENGLAND,

MANUFACTURERS of warranted **Cast Steel**, superior quality, for Tools, Machinery, and Engineering purposes. Single and Double Shear, Blister, German Spring and Sheet Steel of every description—also, **Cast Steel Files**, of high reputation, especially adapted for the use of Machinists, and **Saws** and **Edge Tools** of all kinds.

A stock of the above goods constantly on hand.

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25**c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

RAILROAD IRON.

ENGLISH and AMERICAN Railroad Iron for delivery in New York and other markets in the United States and England. For sale by

S. W. HOPKINS, Broker,
80 Beaver st., New York.

NOTICE TO Railroad Contractors.

SEALED PROPOSALS will be received at the office of the West Jersey Railroad Company at Woodbury, Gloucester County, New Jersey, for the Grading of a Railroad from Woodbury to Glassborough (a distance of 10 miles) until Thursday, the 10th of May, 1860.

Also at Bridgeton; for the Grading from Bridgeton in Cumberland County, to Pittstown in Salem County (a distance of 10 miles) until Thursday, the 17th of May, 1860.

Also at Glassborough; for the Grading from Pittstown in Salem County, to Glassborough in the County of Gloucester (a distance of 10 miles) until Thursday, the 24th of May, 1860.

Profiles, Plans and Specifications of the work may be seen at the Engineer's office in Woodbury, for the First Division; at Bridgeton, for the Second Division; and at Glassborough, for the Third Division, three days before the letting of each Division.

4t17 WM. COOK, Engineer.

OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY, March, 1860.

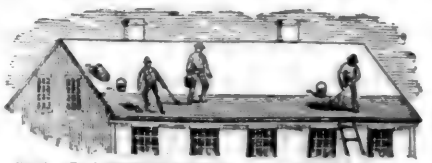
The holders of the Bonds of this Company, due July 1, 1860, can now receive, upon application at this office, 10 per cent. in cash, upon the terms specified in the Circular attached.

The holders are also entitled to the benefit of a Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting, held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,308,400. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.

The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.



A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.

Terms of receipt and endorsement will be furnished on application.

By order of the Board of Managers.

2m15 W. H. McILHENNY, Secretary.

CEMENT ROOFING.

PATENT MICA
AND
Fibrous Cement Roofing.

IT HAS STOOD THE BEST OF ALL TESTS—TIME!

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.
The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor
F. S. PEASE, 61 Main st., BUFFALO.
Reliable orders filled for any part of the United States or Europe.

CEMENTS.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure and free from quick lime**, and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT**, branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels**, and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE**, Secretary, 99 Wall st., N. Y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST.,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

Coal-Burning on the Pennsylvania R. R.

We give beneath a portion of a report made by Mr. William J. Palmer, to the President of this company, upon the subject of burning coal in locomotive engines. In our next we shall give the balance of the report. It is a subject of first-rate importance to all our railroads, whatever progress in this direction one company may make, should, through the press, become the property of all.

J. EDGAR THOMSON, Esq., *Pres't Penna. R. R. Co.:*

In accordance with your instructions, I submit a report of the experiments with coal-burning engines, made on the Pennsylvania Railroad, during last spring and summer. It has been delayed until this late period, for the purpose of accumulating farther experience in the practical operation of some of the plans.

The object of those experiments was to afford answers to the following questions:

First.—Is it practical to use raw bituminous coal, of the varieties found along this road, in *passenger* locomotive engines, without the emission of smoke or cinders to an extent that would annoy passengers? If practicable, what is the best plan of effecting that object? and what saving would result from the substitution of coal for wood in such engines?

Second.—Is the prevention of smoke attended by economy of fuel? and if so, is the saving such as to warrant any alteration of the coal-burning *freight* engines now in use?

Third.—What is the relative value of Pittsburg and Broad Top Coals; and which is the cheaper fuel, all things considered, on each division of the road?

The first series of trials were made with six freight engines—all the property of the company—of which four purported to be "smoke burners," and where known as follows:—the "Gill" plan, No. 206, the "Phleger" plan, No. 210, the "Blue Ridge," No. 120, and the "Dimpfel" plan No. 190. To these were added, for the purpose of comparison, both in regard to freedom from smoke and economy of fuel, two of the older plans in use on the road, viz: a four-wheeled connected "Baldwin Engine," No. 139, and a "Winans Engine," or "Camel-back," No. 51.

The distinctive features of the above plans, as far as relates to the process of combustion, were as follows:

First—The Gill Plan, No. 206.—A modification applied to an old engine, and consisting of a water-space diaphragm or deflector, surmounted by an air chamber and placed across the fire-box, dividing it into two apartments, an upper and lower one, except for a space of sixteen inches next the door, which is reserved for the passage of the flame and gasses. This deflector is portable: being formed of two copper sheets, four inches apart, and connected with the fire-box only by two inlet water tubes, near the bottom of the front leg, and by two oulet tubes, which suspend it from the crown sheet at the back end—thus maintaining the circulation of water. But a short time is required to insert this deflector, when once made, in an ordinary fire-box. The deflector is inclined, the greatest height from the grate being at the back end, where it is about that of the middle of the fire-door. It is supported at this end by two hollow plugs, one on each side of the fire-box. Above the deflector is a roof of fire-brick, leaving an intermediate space or air-chamber of two inches width, to which the air enters by a valve or damper at the front end, and, filling the chamber, is *jetted* down over the whole surface of the fire, through about 600 holes, each 3-16ths of an inch in diameter. The valve is operated from the fireman's stand on the engine, and is opened by him, but closes automatically and slowly, so that the supply of air is gradually diminished. A large quantity of air is also admitted at the fire-door, through 333 perforations of ¼ inch diameter, in the inner plate—that plate being fastened to the outer one, so that the air cannot escape at the sides, but is forced through these small apertures into the furnace. The communication with the atmosphere is had by large holes in the outer plate, which are covered by a sliding valve, affording the means of regulating the admission of air at this point.

The additional peculiarities of the engine are a combustion chamber, 2½ feet long; a fire-brick wall or bridge, 18 inches high, placed in the combustion chamber, 2 feet from the flue sheet, and leaving a space of 10 inches above it for the passage of the gasses; two brick walls, each 8 inches high, placed in the upper chamber of the fire-box near the crown; a blower or steam jet; close-fitting ash-pan dampers; and a straight chimney, without spark-arrester, wire-gauze, or other obstructions.

Second—The Phleger Plan, No. 210.—A new engine built by Norris & Sons. The main features are two transverse water-space bridges, placed 10 or 12 inches apart, horizontally—one rising from the grate at the front end of the fire-box, the other suspended from the crown in the combustion chamber, and lapping vertically over the first about 9 inches. The only air admitted to the fire-box, except that through the grate, which is 6½ feet long, was by a few small apertures in the fire-doors, the value of which was much impaired by a neglect to connect the edges of the inner and outer plates. This engine has, also a combustion chamber, 2½ feet long, made by shortening the flues, and partially squaring the boiler cylinder; hollow longitudinal grate bars, 2 inches in diameter, through which *water* is circulated; and a water bottom forming the ash pan; double fire-doors, by which coal can be charged on each side of the fire-box alternately; a blower; variable exhaust; and straight chimney with no obstructions.

Third—Dimpfel plan, No. 190.—An old engine, altered by Baldwin & Co., under the supervision of the inventor. The principal feature is the conversion of the cylindrical part of the boiler into one long combustion chamber, the water circulating in tubes of 1½ inches inside diameter, which extend horizontally through the combustion chamber, and bending around, rise perpendicularly in the fire-box to the crown sheet, from which they are suspended. These tubes are 1 inch apart in the combustion chamber, and ½ inch apart in the fire-box. The objects proposed by this modification are, to promote a rapid absorption of heat by the water which circulates in an opposite direction from heated gasses; to crowd a large amount of heating surface within the fire-box; to save the tube joints from their usual exposure to the direct action of the fire; to reduce the amount of water necessary to be carried, and, thereby, the weight of the engine; and, lastly, to increase the *run* of the inflamed gases, and allow a greater

time and space for their combustion. Air is admitted over the fuel by means of four iron plates, perforated with half-inch apertures, and inserted in the interior of the sides and front leg of the fire-box, and by two perforated vertical pipes in the boiler cylinder; one at about the centre of its length, and the other close to the fire-box. A limited quantity of air is also admitted through the door.

This engine was fitted with a blower, and a straight chimney, without obstruction, but a wire screen was placed across the mouth of the combustion chamber, to intercept the sparks and dirt, and cast them into a sub-treasury under the smoke box.

Fourth.—The fourth plan was a modification of that applied to the Engine "BLUE RIDGE," by Mr. McCausland, former Master Machinist of the Road. In its present shape, the distinctive features are a fire-brick arch or deflector, a combustion chamber, perforated fire-doors, and a tubular water-grate. The brick deflector is inclined, resting at the front end on a wall of the same material, 18 inches high, built on the grate; and at the back end rising to the height of 35 inches above the grate. It is 4¼ inches thick, and arched transversely, the rise being 3¼ inches; and is supported on each side of the fire-box by 4 hollow water plugs. The length of the grate is 6 feet, (of which 3½ feet are *roofed over* by the deflector.) The longitudinal water tubes composing the grate, ascend perpendicularly at the front end, so as to make a connection with the crown sheet—where the tubes are 1¾ inches apart. A *combustion chamber*, or space, 21 inches long, is thus formed between these vertical tubes and the flue sheet. There are four fire-doors in two tiers, through which the coal is charged alternately. A large quantity of air is admitted at this point, by means of 340¼ inch holes through the inner door-plate. The engine had a blower, and a straight chimney without obstruction, but no dampers.

Fifth—The Baldwin Engine, No. 139, made no pretensions to be a "smoke burner," and differed but little as regards the parts concerned in the process of combustion, from the ordinary construction of locomotives. It has a long deep fire-box—the length being 70 inches, and the depth, from crown to grate, 52 inches, or 2 feet from the grate to the lowest flues. A *dead plate*, 28 inches long, shut off air from the part of the grate next the flue sheet. This served the double purpose of protecting the ends of the flues and of assisting the consumption of the gases. A coke or incandescent fire, remained next the flues, the active combustion taking place farther back; the run was lengthened, and a high temperature maintained for the unignited streams of gas and air. No air was admitted over the fuel, except through a single aperture in the fire-door. The engine was supplied with a blower, a single ash-pan damper, and a cone-chimney, with a spark arrester.

Sixth—The Winans Engine, or "*Camel-back*," *No.* 51, has a long fire-box and long flues—the length of the first being 7 feet, and of the latter 14 feet. A *dead plate*, 14 inches long, occupies the front end of the grate, which is composed of 18 heavy bars, 1 1-16th inches apart. A shank with an eye in each pair of bars, projects from beneath the door, and permits the fireman to rock them seperately, for the purpose of freeing the clinker and ashes. The crown sheet slopes back from a height of 47 inches near the flues, to a height of 27½ inches above the grate, at the door end. The flues are of large diameter, 2 to 2¼ inches inside. A large quantity of air is admitted through and over the fuel at the doors, which are four in number, arranged in two tiers. Coal is charged through the upper two—the lower ones extend to the grate, and are opened only to draw the fire or rake out clinker. The usual cavity in the sloping crown, to admit of charging coal on the front part of the long grate, was closed. The perforations in the doors, for air, numbered 360 of 3-16 of an inch diameter each, in addition to which the lower part of these doors consisted of a coarse grating whose apertures were 2 to 3 inches in diameter, and 12 in number. Considerable air was also admitted through the crevices between the doors.

The other peculiarities were a variable exhaust; and a straight chimney, unobstructed, except at the top, by a coarse grating composed of wires ¼ inch apart, to arrest the sparks, and a damper, which may be thrown entirely across the chimney at stations. A short pipe or second chimney, placed beside the main one at top, acted as a sub-treasury for the reception of dirt and cinders. There were no ash-pan dampers, and no blower. The long fire-box, large sized flues, dead plate, and large admission of air in jets and fissures over the fuel, in this engine, were favorable to the combustion of the gases, and prevention of smoke.

The weights and all the important dimensions of the several engines above described, will be found in the table on page 30 following this report. They were tried with both Pittsburg and Broad Top coals, on the grade of 95 feet per mile between Altoona and Gallitzin, ascending the Alleghany Mountain; and between Altoona and Mifflin, on grades whose maximum did not exceed 21 feet per mile. The trains were special ones, consisting of 8 long eight-wheeled loaded cars for the mountain trip, and 20 for the Mifflin trip. The average gross weight of train, without engine and tender, was in the first case 138⅓ net tons, and in the second case, 347$\frac{4}{10}$ net tons. Including engine and tender, the average total weight of train on the Mountain trial was 188½ tons; and on the Mifflin trial, 397$\frac{6}{10}$ tons.

The weight of fuel burned, and of water evaporated, were noted for each engine on the trials with both coals, but there are circumstances which prevent these results from being accepted as reliable standards of the comparative economical working of the several plans.

It will be seen from table on page 30, that the trial engines differ from each other in respect of weight, size of wheels and cylinders, area of grate and heating surface, ability to use steam expansively, to vary the exhaust, and in other particulars which would effect their comparative economy in the use of fuel, although such distinctions are not peculiar to the nature of the several plans. Again, the fireman, on the trials, differed for each engine, except in the case of the "Gill" and the "Dimpfel," and the engineers differed, except in the case of three engines. This source of inaccuracy could not be avoided. It would not have done to fix the same men for all the engines, as they would have lacked that familiar acquaintance with each, necessary to produce uniform results. *Thirdly.*—The men being taken with the engines, to which they were regularly attached, were in some cases new to the division of road run over, and ignorant of its grades, &c., while in others they were accustomed to the daily use of it.

As the above circumstances might have produced a greater discrepancy in the amount of fuel burned, than the actual results show to have existed between the highest and lowest consumption, we cannot regard these results as affording a correct measure of the comparative economy of the different plans. For their value, however, as standards of the performance of the several engines, *considered under all the circumstances*, as well as to prevent the dissemination of inaccurate reports, a statement is annexed to this report of the actual consumption of fuel, and evaporation of water, by all the engines on that trial.

We come now to consider the results derived from the several plans in respect to

THE PREVENTION OF SMOKE.

First.—The greatest amount of smoke on the trials was made by the "Baldwin" Engine No. 139; which was to be expected, as it had the smallest provision for the consumption of the gases. From *Pittsburg* coal, this smoke was, immediately after a charge, quite black, and did not entirely lose its color before it became necessary to charge again. From *Broad Top* coal it was much lighter, and lasted, perhaps, for only one-half of the time between the charges. With either fuel, however, the smoke would have constituted a very decided nuisance to a train of passengers.

At all times, when the door was opened, the smoke was much reduced, showing that it was chiefly due to an inadequate supply of air to the gaseous part of the fuel. It so happened that this engine, with evidently the most imperfect combustion, consumed less coal than either of its competitors, on the round trip between Altoona and Mifflin; but it must not be therefore assumed that the prevention of smoke is accompained by a waste of fuel. The successful result on that occasion was due to the general fitness of the engine for the special work to be performed, and to the long experience of the engineer and fireman on the portion of the road run over—all the other men being strange to it. The effect of the prevention of smoke on the amount of fuel required to do a certain work, was subsequently tested by a special experiment with a passenger engine, No. 156—the fireman and engineer, and all necessary circumstances, being uniform. This will be hereafter referred to.

Second.—The "*Winans*" or "*Camel-back*" *Engine, No.* 51, made less smoke than the "Baldwin," for two reasons. 1st. Because the fire-box was longer, giving an increased "run" to the gases. 2d. Because there was a large admission of air *over the fire*, at the doors. Having also a larger heating surface and grate area, the combustion did not require to be so rapid, which assisted the consumption of the gases.

With *Pittsburg Cool*, this engine produced, after charging, a quite dark smoke, which only ceased a few moments before the succeeding charge. With *Broad Top Coal*, it proved to be a tolerably good "smoke consumer"—a dark, but momentary cloud succeeding each charge of fuel. This plan showed, I think, the extent to which smoke prevention can be carried in a locomotive, with the largest practical admission of air over the fire, by jets, through the doors or back end of the fire-box, but without a combustion chamber or deflector. The air entering from this position, chases a large portion of the lighter gases ahead of it, to the flues, before a combination can be effected within the limited space and time afforded for the process.

Third.—The "*Dimpfel*" *Engine, No.* 190, made a very little less smoke than the "Camel-back," the difference between the two being scarcely noticeable. With *Pittsburg Coal*, the smoke was quite dark after charging, on stirring the fire; its duration depending on the force of the draft. If pretty full steam was being used, it was soon over; but with a light blast, the diminished supply of air to the gases at once told in the long continuance and deep color of the smoke.

With *Broad Top Coal* in *lumps*, the smoke was not such as to be objectionable; but a single shovel of *fine coal*, disengaging suddenly a large amount of gas, would produce smoke that amounted to a nuisance. The chief cause of the difficulty was an insufficient quantity of air, the provisions for the admission of which were altogether inadequate for Pittsburg coal, and would require much addition of Broad Top. The air admitted through the sides of the fire-box was valuable as far as as it went, but that through the door was of slight service in consequence of a failure to connect the edges of the two plates; and the vertical air-pipes in the combustion chamber were, in my opinion, too remote from the burning fuel (the forward one being halfway of the length of the boiler) to afford much aid to the consumption of the gases. There is no doubt but that an increased admission of air over the fuel, through the sides and legs of the fire-box, and in a proper manner through the door, would enable *Broad Top Coal* to be used in this engine without annoyance from smoke. But for *Pittsburg Coal*, I do not think any practicable increase of air in that manner would effect the object; the velocity of the gases in a locomotive furnace being so great, that it could only mix with a small proportion of those evolved from this rich coal, leaving the great central volume to escape uncombined. The large space provided for the occupation of the gases in the entire length of this boiler, (there being no flues,) is certainly of very

great advantage; but for Pittsburg Coal, it does not appear to supply the place of a *free, open combustion chamber*, of say four feet in length; which would permit the whole mass of flame to be in contact without any interposition of tubes containing water rapidly circulated, whose tendency is to cool the gases below the temperature necessary to combustion.

Fourth.—The Blue Ridge Engine No. 120 was a more successful "smoke burner," than either of the foregoing, having a long deflector or arch of fire-brick; a large admission of air, by jets, through the four fire-doors; and a (short) combustion chamber. The effect of the air admitted through the doors was much more noticeable than in the case of the "Winans Engine," since the fire brick arch served to lead the gases to the back end of the furnace, on their route to the flues; which not only lengthened their run, but enabled them to receive a saturation of air as they passed the doors. Another great advantage from the *fire brick*, was the high temperature which it imparted to the gases evolved from a fresh charge of fuel, when the ordinary heat of the furnace over the fire, or at its surface, was reduced by the application of raw fuel, and by the rapid conversion of solid into volatile matter.

When using *Broad Top Coal*, there was no smoke produced by this engine, except a momentary whiff, of a light brown color, which followed the chargimg of coal, or use of the poker, and was generally over in a few seconds. It never amounted to what could be considered a nuisance for a passenger train. When using *Pittsburg Coal*, however, this could not be said, although under favorable circumstances the smoke was but light. The large amount of gas in this coal requires, for its perfect combustion, an extraordinary quantity of air, admitted so as to combine thoroughly, and at the earliest practical moment, with the gas, before it is hurried off to the flues by the steam draft.

Fifth.—The Phleger Engine No. 210 showed a still farther improvement as regards smoke. With Pittsburg coal, on the mountain trip, the draught of air into the fire-box being strong, the only smoke produced was a momentary cloud, not very deeply tinged, which succeeded each charge of fuel. To obtain this comparative exemption, however, it was necessary to leave the door ajar for some time after "firing." On this character of road, very little difference could be observed between the smoke produced by this engine, and that by the *Gill plan;* but on the light and variable grades between the Altoona and Mifflin, the effect of an inferior provision for air in the case of the former, became quite apparent. Unless the steam valve was tolerably well opened, the smoke was quite dark, and lasted almost continuously. The only air holes provided over the fire—those in the door (whose outer and inner plates were not connected) were insufficient to admit enough air, simply by natural draught, to produce the slightest visible effect upon the consumption of the gases; and it was only when the *strongest* draught of the exhaust steam was used, partially compensating, by an increased velocity of the air current, for a deficient area of admission, that the smoke was reduced within limits that would answer for passenger trains. During the trials, this engine smoked from one-half to two-thirds of the whole time—the color of the smoke slowly diminishing from very dark, immediately after firing, until invisible. Although not adapted in its present shape to passenger service with *Pittsburg Coal*, I think a considerable increased supply of air through orifices in the door, (connecting the rims of the inner and outer plates,) and by hollow stay-bolts in the sides of the fire-box over the fuel, would bring the plan up to that standard.

With *Broad Top Coal* the present performance is satisfactory—the only smoke being a yellowish puff, lasting about five seconds after "firing" or stoking—and at no time dark enough to attract attention from any one not particularly watching for it. The success of this engine as a "smoke consumer," in spite of the very limited admission of air over the fire, (which hardly exceeded that of the "Baldwin Engine,") is due, I think, 1st. To the long grate, which admits considerable air in excess of that required for the combustion of the coke portion of the fuel, and which also affords a long *run* to the gases. 2d. To the transverse bridges, dividing the fire-box from the combustion chamber—which check the currents of gas and air, and deflect them into intimate mixture—a pre-requisite of combustion. 3d. To the combustion chamber, (2½ feet long,) which still farther adds to the distance traveled by the streams of gas and air before reaching the flues, and presents a large open space for the completion of the process of combustion.

In this engine, the smoke was greater than it would probably have been in another one of the same general plan, from the fact of the fire-box and ash-pan being too shallow. The latter was soon filled with ashes, reducing the supply of air through the bars—and in the former, the white, or nearly white flame, could be seen ending in a dark-reddish top, being cooled into soot by contact with the water surface at the crown. I think, moreover, if the transverse bridges had been of *fire-brick* instead of water sheets, the effect would have been more beneficial; since they would have helped to sustain a proper temperature for the ignition of the gases arising from a fresh charge of fuel.

Sixth.—The Gill Plan of Engine No. 206, showed more satisfactory results in regard to the prevention of smoke, than any of its competitors. Though not entirely done away with, the quantity was not great enough at any time to have constituted an annoyance to passengers.

With *Broad Top Coal*, a momentary tinge, after applying a fresh charge or stirring the fire, was the only observable discoloration, and this was lighter and less continuous than the smoke from ordinary wood-burning engines. With *Pittsbarg Coal* there was rather more, but it was seldom darker than that which is emitted by Pine Wood, while the absence of that sharp and acrid quality possessed by the gases from wood, (so disagreeable in its effect upon the eyes of passengers,) certainly gave the advantage to coal. An increased admission of air over the fire through additional orifices in the deflector, would have still farther reduced the smoke. This was evident from the fact that leaving the door slightly ajar, after a charge of coal, had such an effect. Opening it wide, however, had the opposite effect; showing that the allowance of air was nearly sufficient, and that any considerable addition, (particularly when admitted in mass,) by chilling the gases, promoted the formation of smoke. The result was the same, if after a short period succeeding a charge, the door was opened, even ajar. The quantity of air entering through the orifices in the deflector and door, being then sufficient to consume the reduced amount of gas, any addition of cold air was deleterious, and its effect immediately shown in the production of smoke. Thus we have reached, in this improvement, a point exactly opposite to that at which we set out. In the "Baldwin Engine" we found that the opening of the door wide, always reduced the smoke. In the "Gill" plan, the opening of the door, at all, (except for an instant after "firing,") actually causes a slight emission of smoke, where before there was none.

The peculiarities of the arrangement to which the success of this engine is due, have been already described. The plan recognizes to the fullest extent, the following cardinal principles:

That for the combustion of the gases contained in a rich bituminous coal, a special admission of air in a large quantity *over the fire* is indispensable, and that the air entering by the grate should only be relied upon to consume the *coke* portion of the fuel.

That the air for the gases should be admitted through small orifices, (and not in mass,) in order both to avoid the cooling effect of air in bulk, and to ensure at the great velocity of the currents in a locomotive furnace, that thorough intermixture of the air and gas, which is essential to perfect combustion.

That the air should be admitted at the earliest moment after the gases are evolved, in order that the greatest time and space may be afforded for the completion of the process.

That combustion is assisted by any arrangement for mechanically mixing up the gas and air; or for extending their "run," and affording as much clear space as possible for this combination to take place in, before the flues are reached.

These principles are not new, or original with the inventor of this plan. They are chiefly the result of the investigations of Mr. Chas. Wye Williams, of England, and have been repeatedly published by him. The novelty in the plan under consideration is in the application of these principles to meet most of the requirements of the process of combustion in a locomotive engine; and consists mainly of the *air chamber* provided above the surface of the fire, from which the air is admitted downwards in a manner to cause the most effective combination between it and the gas. If admitted at the sides, or at the front or back of the fire box, the central mass of gas would tend to escape unconsumed.

The efficiency of these essential points was increased in Engine 206, by a number of arrangements, which, although of minor importance, will be found very desirable appendages to any "smoke consuming" engine. These were—

1st. A simple mode of increasing or diminishing the supply of air to the deflector, by means of which the quantity entering is within the easy control of the fireman. The valve never closes entirely, however, so that a small portion is at all times admitted; but much less than when coal is charged, or the fire stirred—requiring, in consequence of the sudden and rapid evolution of gas, a corresponding increase in the supply of oxygen. The air admitted through the fire door is also controlled by a valve; but this should nearly always be kept wide open, in order to provide for the combustion of *carbonic oxide*, whose loss is none the less important, because (unlike the carburetted hydrogen,) it does not produce a visible smoke at the chimney top. The fireman should be guarded not to make the emission of smoke the sole standard by which to regulate the supply of air either through the deflector or the door; otherwise the combustion may be far from perfect, even when the smoke nuisance is avoided.

2d. *A Blower.*—Which may almost be considered as indispensable to a coal burning passenger engine. Its use is chiefly through the agency of a jet of steam admitted into the chimney, to prevent smoke at stations, or on steep down grades, or whenever steam may not be passing through the cylinders. This it does by maintaining a draught of air to the gases.

3d. *Tight fitting dampers*, which are a necessary accompaniment to the blower, and avoid waste of fuel from its use. With dampers perfectly tight, the fire on the grate will not be fanned up when the blower is opened, and no loss of fuel can occur. The only air admitted will be *over* the fire to the gases, which would otherwise escape unburned, and with the production of smoke. There will thus be no danger of the engine becoming "too hot," at least before all objectionable smoke ceases.

The general results of our experiments to test the practicability of avoiding smoke from locomotives using bituminous coal, may thus be summed up:

First. In the order of comparative freedom from smoke, the engines tried stand as follows: Gill, No. 206; Phleger, No. 210; Blue Ridge, No. 120; Dimpfel, No. 190; Camel-back, No. 51; Baldwin, No. 139.

Secondly. The first four plans on this list, the Gill, Phleger, Blue Ridge, and Dimpfel, showed such exemption from smoke as (by slight modifications in the case of the latter,) would permit them to be used for passenger trains, with *Broad Top Coal.*

Thirdly. "*The Gill*" plan is the only one of the six that in its present shape would admit of the use of *Pittsburg Coal* for passenger trains. But the "Phleger" plan might probably be brought up to this standard, simply by an increase

in the supply of air, admitted in a proper manner through the door and sides of the fire-box.

As regards freedom from Sparks and Cinders, or pieces of decrepitated coal and coke, the engines rank in a somewhat different order, namely: 1st, Phleger; 2d, Blue Ridge; 3d, Gill and Dimpfel; 4th, Baldwin; 5th, Camel-back. The *Phleger Engine*, with a straight open chimney, was remarkably clean in this respect; a result due to its easy exhaust, (permitted by the large amount of heating surface in this engine;) to the obstruction formed by the bridge walls which partially throw the shower of fine particles back on the fire, where they were consumed; and to the deep com bustion chamber which allowed those that passed the bridges to fall into a pit or sub treasury out of the influence of the strong draught.

The *Blue Ridge*, also with a straight open chimney, emitted considerable fine dirt after each charge of coal, or whenever the fire was stirred; but not to an annoying extent, except on very heavy grades. The comparative exemption of this engine was due to its large grate and heating surface; to the brick deflector placed immediately over the fire, which interrupted the passage of the dirt towards the flues; and to the deep combustion chamber.

The *Gill* and *Dimpfel Engines* were about on a par as regards the emission of dirt and cinders from the chimney. A considerable quantity was given off by each engine, particularly on steep grades. It should be remembered, however, that the dirt thus emitted is of a very different character from the sparks and cinders given off from engines burning wood. The coal, in the first place, is heavier, and the particles seldom float in at the car windows, like the wood sparks, but fall quickly to the ground; and again, being less inflammable, they are usually extinguished before reaching the top of the chimney. Both engines had straight open chimneys, but the "Dimpfel" was provided with wire gauze across the outlet of the combustion chamber into the smoke-box.

The *Baldwin Engine*, the only one provided with a spark arrester, threw a great deal of dirt, but it was quite fine.

The *Camel back* had a straight chimney, unobstructed except by a coarse wire grating at the top. Having no combustion chamber, deflector or interposing bridge walls, the cinders thrown were very numerous and large.

The proper direction in which to look for improvement in this respect, would seem to be in the adoption of such measures as will permit the use of enlarged exhaust pipes, so that the particles of coal or coke will not be lifted from the main body of the fuel on the grate, the chimney remaining open and unobstructed. The change to *coal*, from a fuel whose heating value, in comparison with its bulk and weight, is so small as that of wood, will at once admit of the enlargement of the exhaust nozzle to a certain extent; (since a slower rate of combustion will produce an equal heating effect,) while the adoption of any plan to promote the circulation of water and the abstraction of heat by it from the flame and gases, or to reduce the loss by radiation and convection from the boiler, would still farther assist this object. Some simple form of *variable exhaust*, which would allow the draught to be lessened, whenever the work did not require the maximum force, and for a few seconds after each charge of coal until the smaller particles should have time to cohere together, would also contribute greatly to the abatement of this nuisance; as would the interposition of deflectors and bridges in the fire-box or combustion chamber, in a manner not to obstruct the draught. These arrest not only a large proportion of the unburned particles and throw them back on the fire; but the deflector, by lengthening the run, assists the combustion of another portion by the flame before reaching the flues, and the bridges may serve to launch them into a place of deposit out of the reach of the strong draught. It is found that a proper supply of air in *jets over the fire*, also assists materially in consuming (in addition to the gases) the minute particles of coke which would otherwise be thrown out at the chimney.

In the regular use of coal in passenger engines on this road, there need be no dirt of this sort emitted that will amount to an annoyance to passengers.

The "Gill plan" would have shown to much better advantage in this respect had not the deflector in the engine tried, extended to the grate, which unduly contracted the grate area. This peculiarity was not essential to the plan, inasmuch as the bottom of the deflector might have been attached to the front sheet of the fire-box above the grate.

(To be continued.)

Dayton and Michigan Railroad.

The annual meeting of the stockholders of this road was held in Dayton on the 15th inst., at which the old board of directors and officers were re-elected. At the date of the previous meeting, the road was finished and working to Lima, just one-half the length of the whole line. The last rail of the main line was laid on the 18th of August last. On the 29th of the same month the road was opened for business its entire length from Dayton to Toledo, and since that time has been in successful operation. Two passenger trains and one freight train have been run daily since the 16th of April last. The receipts have been:—

From local passengers	$77,278 42
" through "	19,068 84
" local freight	63,077 56
" through "	50,068 58
" mails and express, etc.	11,656 32
	$221,149 72

The expenses for same time were:

Machine shop	$1,223 42	
Maintenance of roadway and bridges	24,002 31	
Wood and oil	21,008 06	
Watch and watchman	3,211 24	
Wages, engineers, repairs, etc.	15,260 09	
Repairs, cars and conductors' wages	18,146 95	
Lost baggage and damage to stock	625 24	
Repairs of buildings, agencies and clerk hire	15,673 99	
Advertising, office and mail express	3,213 20	
Taxes and costs	7,729 03	
		110,093 53
Leaving as net earnings		111,054 19

—or 50.22 per cent. of the gross receipts.

During the first five months of the year there were but 70 miles of the road in operation; and for the first six months after the opening of the road north of Lima, the want of switches, station house, etc., prevented the bringing of business to the line of the road.

There have been seventeen warehouses, five steam saw-mills and five steam flouring-mills erected since the opening of the line north of Lima, all of which will add materially to its local trade.

An arrangement has been made with the several companies, forming the line between Cincinnati, Detroit and Port Huron (where the Grand Trunk crosses the St. Clair River into Canada) by which sixty first-class freight cars of a compromise gauge have been put in that service—the gauge the road from Toledo to Detroit being one and a half inch wider than that of the Dayton and Michigan. Freights are now moved daily from Cincinnati to Detroit and Port Huron Ferry without transhipment or breaking bulk. The repor says:

The geographical position of the Dayton and Michigan road, across the State of Ohio from Cincinnati to Toledo, is one of unparalleled strength, and when fully conditioned and equipped may defy any competition between the Ohio River at Cincinnati and Lake Erie, notwithstanding the extensive combination of old and wealthy lines to neutralize its advantages. The Cincinnati and Cleveland line is fifty-six miles or twenty-eight per cent. longer than the Dayton and Michigan and the heavier grades, so that if prices are put at the net cost of transportation on the long line, it will leave a greater margin of profit to the Dayton and Michigan line than has heretofore been realized by the long line on the same traffic. The advantages over the Sandusky, Dayton and Cincinnati line, in distance and grades, are not as great as those over the Cleveland route, but the harbor and shipping facilities at Toledo are so much superior to Sandusky that the former must always have the preference for shippers.

Since the date of the last annual report, there have been put on the road four passenger cars, eighty-five freight cars, and eight new locomotive engines, all of first-class work, making the present equipment of the road as follows:

16 locomotives, 10 first-class passenger cars, 1 second-class do., 3 baggage cars, 97 box freight cars, 14 stock cars, 40 platform cars, 90 gravel cars, 24 hand cars.

During the year there have been erected six wood-sheds, and six water stations; also at Dayton, a very commodious brick depot, 200x40 feet. Of this length, 40 feet is carried up two stories high, giving on the second floor eight good rooms for general offices, etc. This arrangement brings all the operations of the Board at Dayton under the immediate supervision of the officers of the Company. Telegraph poles have been set along the whole line and the wire strung and in actual use between Dayton and Lima. The whole line will be up and in use by the first day of June.

The title in full to eight acres of land in the town of Lima, has been acquired by the company, and is being devoted to the purposes of shops, yards, side tracks, etc., etc. A locomotive stable to contain ten engines; a machine shop, sixty feet square, and a carpenter shop 60x160, are being finished. The buildings are of brick, roofed with iron. The company own an extensive bank of clean gravel near Leipsic station.

Under a by-law of the Company the capital stock bore interest until the completion of the road, and payable in stock or cash. On completion of the road notice was given that no interest would be allowed on stock after September 1, 1859, and that accrued interest would be paid in stock; stockholders being requested to return old certificates and receive new ones in lieu thereof. So far as returned, new certificates have been issued, and stand as follows:

New certificates	$1,297,579 75
Old do.	816,864 79
Total	$2,114,444 54

Mortgage bonds are 3,000, of $1,000 each, as follows:

First mortgage,	300	$300,000 00
Second do.	2,700	2,700,000 00
Total	3,000 bonds	$3,000,000 00

Of the second mortgage bonds there were 300, amounting to $300,000, irrevocably pledged to redeem the three millions of first mortgage bonds. Of these bonds there have been sold as follows:

First mortgage, 300		$300,000 00
Second do. 2,200		2,200,000 00
Total. 2,500 bonds		$2,500,000 00

Leaving unsold, but hypothecated to secure the indebtedness of the Company for iron, 500 bonds —$500,000. Making the grand total $3,000,000.

GENERAL BALANCE SHEET.

Construction	$4,144,894 12
Interest and discount on bonds	586,016 48
Right of way	94,383 53
Engineering expenses	31,782 11

Alleghany New Wire Suspension Bridge at Pittsburg.

Length of Pittsburg (half) span	171 feet	
" 2d (main) "	344 "	6 in.
" 3d " "	344 "	6 "
" Alleghany (half) "	177 "	
Total length between abutments.	1,037 feet	
Width of floor between the rail'gs	40 "	
" road-way	20 "	
" each sidewalk	10 "	
Height of cast iron towers to saddles	32 "	
Deflection of cables in summer	30 "	
Diameter of inside cables		7¼ in.
" outside "		4¼ "
Number of No. 9 wires in each main cable	1,928	
Do. small cable	650	
Aggregate weight of cables	333,000 lbs.	
Number of wire rope stays in each main span	40	
Aggregate strength of cables and stays	7,300 tons.	
Weight of one main span	450 "	
Superficial area of floor	13,000 sq. ft.	
Maximum transitory load at the rate of 40 lbs. per sq. foot	260 tons.	
Aggregate wt. of bridge and maximum load	740 "	
Tension result'g from this weight.	1,080 "	
Aggregate solid section of four anchor chains in surperficial inches	180	

The chains are anchored to cast iron plates, which are supporting a large mass of masonry. All this iron is imbedded in asphaltum, applied in a hot state, so that neither air nor water can reach it. The chains and that portion of the cables with which they connect inside of the masonry, is by means of this coating of asphaltum perfectly protected against oxidation. In addition to this, they are well grouted with cement, and all the masonry surrounding the chains is well grouted. Every precaution has been taken to secure this portion of the work, which is out of sight, in a permanent manner, that leaves no doubt as to its preservation.

The cast iron towers will be crowned with ornamental turrets, and when completed will present a fine appearance. The now open truss railings will be closed by neat paneling, in keeping with the style of the towers. Two toll-houses will be erected at each end of the bridge that will form appropriate and convenient entrances to the bridge.

J. A. ROEBLING.

Journal of Mercantile Law.

LIABILITY OF ACCOMMODATION INDORSER TO PAYEE OF NOTE.

The case of Moore *vs.* Cross recently decided by the N. York Court of Appeals decides in substance that where a party indorses a note, made payable to the order of a third person, without a consideration, he is, notwithstanding, liable to such payee, as an indorser for good consideration, if the payee would not otherwise have taken the note.

The note in question was made by one McGervey, payable to the order of the plaintiff and was given for coal sold by the plaintiff to McGervey, on the condition that the defendant Cross should indorse his note. Cross did indorse the note with knowledge of this understanding. Upon the trial of the case which was had before a referee, the complaint was proved in substance, and the referee reported in favor of the plaintiff. The judgment entered upon this report was affirmed at a General Term of the Supreme Court from which the defendant appealed to the Court of Appeals. The decision of the Court of Appeals, affirming the judgment and entering quite fully into the law of endorsements we give entire.

JOHNSON, CH., J.—This action is upon a promissory note made by one McGervey, payable to the order of James Moore, and indorsed in blank by John A. Cross, James Moore and John McNamee. The plaintiff is the James Moore to whose order the note is payable. It was proved that, upon a negotiation for a sale of coal by Moore to McGervey, Moore agreed to sell him the coal for his note indorsed by Cross, and for this purpose Cross indorsed the note. The sale accordingly took place, and the coal and the note indorsed by Cross were respectively delivered. The note was discounted for Moore at the Atlantic Bank, and being unpaid at maturity was duly demanded and notice duly given to Cross. It was subsequently taken up at the bank by Moore, the plaintiff. The question is whether, on this state of facts, Moore can recover in this action against Cross.

It is quite conceivable that, in the ordinary course of business, a promissory note may, before it falls due, come to the hands of a person who already appears upon it as payee, or indorser. In such a case he cannot maintain action against any of the parties whose indorsements are subsequent to the first appearance of his name. The legal reason is that each of those persons, on paying to him the note, would have an immediate right to demand payment from him on his earlier indorsement. The law, to avoid this circuity, denies an action to a party thus situated. If the note had passed through his hand without indorsement, or if it had been indorsed without recourse by him, the reason would not exist; and there could be no objection founded upon his prior holding or indorsement, to the maintenance of an action by him against the parties liable on the note.

Again, if a note be made and endorsed for the accommodation of A., who endorses it to another person, and afterwards, in the course of trade, again becomes the holder, he could maintain no action against the maker and indorser for his accommodation, notwithstanding their apparent liability to him on the face of the paper. The fact of the accommodation making and indorsing might be proved to defeat the action, and it would establish that the agreement of the parties, contrary to the legal inference from the face of the paper, did not impose a liability on the maker and indorser to pay the party suing. This, in principle, is very like what the plaintiff seeks to maintain in this case. Having brought his action as a holder, and producing the paper indorsed in blank, he has *prima facie* made out a title as such; and to rebut the inference which arises on the face of the paper, that a recovery by him against Cross, would only lead to a new recovery by Cross against him, he shows that the defence of circuity is not available against him, inasmuch as Cross could have, by the original agreement of the parties, no recovery against him. The case is, as to its legal merits, the same, as if Cross had taken up the paper from the bank and brought an action against Moore as payee, and in such a case no one could doubt the competency of the proof of the facts now in proof, or their conclusiveness to defeat Cross' action. Between parties thus standing in immediate privity with each other, an action could no more have been maintained by Cross against Moore than it could, had Moore been strictly an accomodative indorser for Cross. When this note was originally in Moore's hands, the blank indorsement of Cross could have been rendered entirely conformable to the real agreement and object of the parties by Moore's making his own indorsement without recourse in terms. Upon such an endorsement the paper would no longer have afforded a *prima facie* answer to Moore's action against Cross, nor could Cross have maintained that such an indorsement was unwarranted, as it would have exactly carried out the intention of the parties. Between these parties I can see no reason why the indorsement might not thus have been made at the trial; or why it may not now, being a mere matter of form, and the right to make it being proved, be treated as made.

Some confusion has been thrown around this subject from what has been finally settled to have been an error, treating such an indorsement as a guaranty, and charging the indorser as a maker or guarantor. This doctrine was advanced in Herrick *vs.* Carman, and was adjudged in Nelson *vs.* Dubois and Campbell *vs.* Butler. It was attacked in Dean *vs.* Hall and in Leabury *vs.* Hungerford, and was finally overthrown in Hall *vs.* Newcomb, and the same case in error. The chancellor, in his opinion in the latter case, says: "If the object of the second indorser was to enable the drawer to obtain money from the payee of the note, upon the credit of the accommodation indorser, he may indorse it without recourse; and, by such indorse-

ment may either make it payable to the second indorser, or to the bearer; and such original payer may then, as legal owner and holder of the note, recover thereon against such second indorser, upon a declaration stating such special indorsement by him, and subsequent indorsement of the note to him by the second indorser. He proceeds to say that the party might proceed on the common counts, giving a copy of the notes and indorsements; but that he must in either case, show demand and notice to charge the indorser. In Spies *vs.* Gilmore, the doctrine came before this court under slightly different circumstances. Want of demand and notice were held to be excused, upon the circumstance of the case, in the Superior Court. In this court it was discussed and decided on the question of the sufficiency of the excuse; and not an intimation is to be found throwing any doubt upon the position, that had those defects not existed, the plaintiff might have recovered. The later cases being upon written guaranties, and not upon indorsements, are not applicable to this case. The case of Herrick *vs.* Carman, and Tillman *vs.* Wheeler are entirely in harmony with this view. In neither of them was it made to appear that the second indorser put his name on the paper to give the maker credit with the payee. On that ground each of them was decided, while the whole scope of the opinions shows, that with that proof, the court would have sustained a recovery. The case of Waterbury *vs.* Sinclair, sustains the general position of the plaintiff, as do the opinions of Mr. Justice S. B. Strong and Mr. Justice Emott, though the decision of the former was overruled upon the ground that there should have been an actual indorsement without recourse. It seems to me that, under the present system, if a right so to indorse appears, and it may be done even at the trial, that substantial justice is promoted by regarding it as done, and looking upon its actual doing as the merest matter of form. The recovery was founded on correct legal principles. The fact that an indorsement without recourse would present exactly such a case as might frequently happen in the transaction of business, and if so happening would strike no one as violating the ordinary theory of promisiory notes, shows that the real rites of these parties are capable of being enforced without violence to any rule of law, under the contract they have actually made. All the judges concurring.

Texas and New Orleans Railroad.

The road was entirely finished some four or five days since, from Beaumont to within three miles of the Trinity river at Liberty, and is by this time complete to the river, a distance of forty-three and three-quarter miles. Detachments of laborers and mechanics under sub-contractors, are at work at short intervals, on the whole route from Houston to the Sabine, some grading between the San Jacinto and Houston; some constructing the bridge over the San Jacinto which is now nearly completed; some grading and cutting cross-ties between the San Jacinto and the Trinity; some driving piles in the low places of the bottom west of the Trinity, (on the east of the Trinity the ground is high,) some constructing a bridge over the Neches; and others grading to the eastward between the Neches and the Sabine. The iron for the entire road is either now on the ground or in this city, and ready to be sent to the spot as soon as the road bed is ready. The bridges are all contracted for by Messrs. Pride & Bloomer, on the Howe Truss Patent plan. They will be completed in a short time; and that over the Trinity, which will be the last finished, will be done by the 1st of July.

We are assured that the entire road from Houston to the Sabine will be completed by or before November 1st next. The distances are as follows: from Houston to Liberty, 39 miles; from Trinity to Beaumont, 43¾ miles; from Beaumout to Sabine, 22 miles.—*Galveston Cirilian.*

A Moseley Iron Aqueduct on the Ohio Canal.

Through the intelligence and public spirit o Major Backus and Gen. Dodge, Canal Commissioner and Engineer of the Ohio Public Works, we are now enabled to record the successful erection of a Moseley Iron Aqueduct and its application to practical daily use on the Ohio Canals. The stone aqueduct over Furnace Run, eleven miles north of the town of Akron, in Summit county, having been washed away, and it being desirable to erect another structure of an equally substantial character, but possessing greater advantages in respect to water room below, these gentlemen invited proposals from the Moseley Bridge Company, and we can testify from an examination of the work, which we deemed of sufficient importance to justify a personal visit, that they have succeeded in obtaining as simple, perfect, and strong an Aqueduct as there exists in this or any other State. We found on measurement that the extreme span of the structure was 47 feet, the length of trunk supported by it 39½ feet, the width of the water way 21 feet, and its depth 4 feet, giving it a capacity of 3,318 cubic feet of which, at 62½ lbs. to the foot, makes a permanent burden of over 103 tons weight of water. Adding to this the weight of timbers, 32 tons, and we have an aggregate permanent load of over 135 tons.

The arches to support this weight are made of the best quality of plate iron, three-eights of an inch thick, disposed in an isosceles triangular tube —having an elevation of 14 inches. The theoretical strength of the structure is 600 tons, and the experiments of the Bridge Company show that it would be perfectly safe to load it to the extent of 420 tons. Thus it will be seen that its actual strength is about four times its permanent load, and its practical strength nearly three times that much. The stirrups and suspension rods are made of ⅞ inch round iron, and number one to every 18 inches of chord. The chord is composed of 3 bars, 4 inches by ⅝ths.

The feet of the arches rest upon stone pillars 4 feet square, and fully 2 feet above the water level. Depending from the chord are ⅞th rods, about 8 feet in length, supporting the floor-beams of the trunk. The arches are held in position laterally by three setts of wrought-iron truss beams over head, which effectually prevent any deflection in a lateral direction. The water was let in on the 27th of April, and such is the character of the structure that up to this time there has been no perceptible vertical deflection.

We have been thus particular in describing this Aqueduct, because we believe the Moseley Bridge to be one of the real improvements made in structures of this character. And we are pleased to see an adaptation of the best material which the engineer now has at his disposal, arranged in its best and most economical form, to the actual wants of our most important public works. The wooden structures which have been so common on our canals lack both strength and durability, and cost for continual repair almost the price of a new Aqueduct every four years.

While stone structures, as in the present instance, from the massive character of the underworks necessary to support it, interferes so seriously with the current below, as to endanger their stability. In the iron Aqueduct now under consideration, we have both these difficulties obviated, and a permanent structure, needing little repairs, and furnishing ample water-way below afforded at a trifling advance over the cost of a wooden aqueduct. From its peculiar construction also, should it be desirable from any cause whatever, to renew any of the timbers in the trunk, it can be done at pleasure without displacing the water or delaying the traffic. And the whole trunk may be raised or lowered with a very small force, and in a very short time. Another feature of great importance to the engineer in the erection of an Aqueduct, is the character of the masony needed to support these structures, as compaired with that needed for almost any other. The thrust of the arch is all sustained by the chord bars, so that the abutments have to sustain nothing but the actual weight of the superstructure. This feature gives it an immense advantage over the stone Aqueduct, as far as cost of under supports is concerned, while as far as regards time and labor of erection, one of these structures can be erected complete in less time and very little more expense, than is required in the preparation of the wooden centre needed for the stone aqueduct. And such is the accuracy of adjustment afforded that the joint, between the permanent bed of the canal and the aqueduct, is almost absolutely perfect.—*Railroad Record, May* 10.

The "Novelty" Steam-Power Passenger Car.

On Saturday last the car "Novelty," built by Kimball & Gorton, which is driven by an engine built by M. W. Baldwin & Co., made a trip to Norristown; and of the passengers on board, there was not one—we feel warranted in saying—who did not believe that the days for heavy engines and long trains on short roads, are numbered; and that, in a short time, single steam cars will succeed to the passenger business on omnibus roads, and on the suburban portions of trunk lines.

The car "Novelty" will seat thirty-eight passengers; the engine has power for a speed of thirty miles an hour; the boiler occupies a vertical position on the front end of the car; the gearing, which in most of its parts is similar to a locomotive, is under the floor, and the water tank—an iron pipe—is within the seats, which extend lengthwise along the sides of the car. The weight of car and engine, ready for service, is only 15,000 pounds. The engine has two horizontal cylinders 5 inch diameter, 12 inch stroke; the car stands upon a pair of drivers 3½ feet diameter, and a truck. The machinery occupies but 2½ feet of the body of the car, additional to the space occupied on the platform of horse-power cars by the driver.

On a short road, stocked with steam cars, the rail might be at *least* one-third less than the weight of rail on roads traversed by heavy locomotives, and the whole superstructure would be less costly for original construction and for maintenance in good repair. Clearly we are on the threshold of an improvement in the transit of passengers on short roads, and in the accommodation of local travel at city ends of far-reaching trunk lines.—*U. S. R. R. & Mining Reg., May* 9.

Southern (Miss.) Railroad.

We lean with pleasure that the Southern Railroad is making giant strides toward Meridian—that the track laying will reach *Lake*, in Newton county, one hundred miles from Vicksburg by, or before 1st June, and that the entire road will be ready for the trains to run between Vicksburg and Meridian in the month of October next.—*Vicksburg Whig.*

Suez Canal Commenced.

A letter from Alexandria, in the Paris *Patrie*, gives some details relative to the state of things connected with the Suez Canal: Whilst negotiations are being carried on between the Porte and the European Powers on the subject of the canal, the preparatory works advance in Egypt. Two moles are being constructed at Port Said, one of which will run out 2,000 metres into the sea, and the other 800. Stations, large sheds, and other establishments of a certain extent, are being built between Port Said and Suez, and a large town is to be founded half-way between the two places, which will be named after the son of the Viceroy. The number of European workmen employed is about 700, but the native laborers count by thousands. The principal works will, it is hoped, be commenced in a few months.

Pacific Mail Steamship Company.

The President of the Pacific Mail Steamship Company makes the following statement:

I present herewith, on behalf of the Board of Directors, a statement of the condition of the Pacific Mail Steamship Company on the 1st of May, 1860.

The assets therein stated have been recently again valued with care by a Committee of three Directors. The previous valuation was in May, 1858, since which time all outlay on the property then belonging to the company has been charged to profit and loss.

The reduction for depreciation of steamships, as adopted, is $290,899.70, being at the rate of fifteen per cent. per annum, from May 1, 1858, less the certain expenditures for repairs of a permanent character.

Surplus May 1, 1860	$911,188 61
Amount charged off for depreciation.	290,899 70
Making surplus with the old valuations of	$1,202,088 31
Surplus on Nov. 1, 1859	1,013,158 46
Net earnings between Nov., 1859, and May 1, 1860	$188,929 85

The investment in steamships has been further changed by the purchase of the Washington, and the loss of the Northerner, by striking a sunken rock off Mendocino, not laid down on the charts. She was insured for the sum of £15,000.

You were advised by our report of Nov. 8, 1859, of the formation of the North Atlantic Steamship Company. The option then reserved of taking the steamer Adriatic, or, in lieu of her, the Baltic or Atlantic, was subsequently surrendered, and the Pacific Mail Steamship Company became, and is now, a stockholder in the North Atlantic Steamship Company to the extent of 4,000 shares.

The steamers of that company were withdrawn from the California route, after the voyage of 5th March, under a contract made with the Atlantic and Pacific Mail Steamship Company and Mr. C. Vanderbilt, to secure harmonious running, by leaving to the Atlantic and Pacific Steamship Company the Atlantic service, and confining the operations of this company to the Pacific Ocean. This contract is for the term of five years from the 17th of February, 1860.

Under this, our capital stock has been increased to $4,000,000, or 40,000 shares, the limit of the charter. Of this issue, 5,000 shares are deposited in escrow to be delivered to the Atlantic and Pacific Steamship Company, upon the final transfer to this company of the titles of the four steamers, Uncle Sam, Orizaba, Cortez, and Sierra Nevada, which are now embraced in the annexed statement of assets. They become the property of this company with the good-will of the Atlantic and Pacific Steamship Company and Mr. Vanderbilt on the Pacific. In addition to the delivery of the stock named, there will be payable $250,000 in monthly instalments of 10 per cent. out of future receipts under the contract. We secured; but decided not to avail of, the option of purchasing the Champion, the fifth steamer of the Atlantic and Pacific Steamship Company. She is now on her way to New York, and to meet the outlay for the voyage around, the further amount of $50,000 will be paid to the Atlantic and Pacific Steamship Company.

Against these payments, we are to receive under the arrangement our proportion of the mail pay, under the contract of said company with the Government, for three months, at the gross rate of $250.000 per annum, or $43,750.

We are also to receive the mail pay of the Panama Railroad Company for the year 1860, the established rate of which per annum is $100,000, but they have now no binding contract beyond June 30, 1860.

This last contribution grows out of the general features of the agreement, among which there is a provision for a thrice-monthly line of steamers, and the guaranty of ample facilities for the transportation of freight at rates which must command large shipments.

The steady increase of the freighting business, and the stimulus given to travel by the discovery of new mines in California, justify our thus affording increased facilities for both, and we may feel confidence that the future organization of the line throughout will meet, as to the speed and general efficiency, all reasonable public requirements. On the other hand, by adopting a division of earnings as favorable to this company as that arranged with the North Atlantic Steamship Company, the business becomes mutually beneficial, and gains the best element of permanency.

By this new distribution of the tonnage for some time past on the route, the ends aimed at by us in the establishment of the North Atlantic Steamship Company have been attained; and, at the same time, the all-important object of a discontinuance of the competition, under which our receipts barely equaled our expenses, even with the well-balanced economy which has been established during such competition.

The identity of interest essential to entire harmony between the connecting lines is strengthened by the agreement of the Atlantic and Pacific Steamship Company and Mr. Vanderbilt, to receive as a permanent investment, 5,000 shares of our stock, towards payment of property transferred to this company.

The departures from New York have been thrice-monthly since March, but irregular. The thrice-monthly line will be formally and permanently organized in July, 1860, and the steamers leave New York and San Francisco on the 1st, 11th, and 21st of each month.

ANNUAL STATEMENT OF THE PACIFIC MAIL STEAMSHIP COMPANY, MAY 1, 1860:

ASSETS.

Cash in Bank of America		$9,736 04

Victoria Bridge.

SCHENECTADY, N. Y., May 17, 1860.

Dear Sir—In the *very valuable* articles on the Victoria Bridge does the author use £ sterling, or £s of Canada, when he writes? Does he use the gross ton (English) or net ton (American)?

A note in next number is desirable.

Yours

WM. M. GILLESPIE.

HENRY V. POOR, Esq.

Whenever pounds in money are expressed, sterling is intended.

The weight of the Victoria tubes and of all English bridges is given as found in the descriptions of the various structures referred to, and is, therefore, no doubt, expressed in gross tons, but the weight of American bridges, whether of wood or iron is expressed in net or American tons. This makes the comparison still more favorable for the American bridges quoted.

Memphis and Ohio Railroad.

This important road has been opened to Paris 130 miles from Memphis. It is to be continued from Paris to the State line, eighty-one miles further, by the Memphis, Clarksville and Louisville Railroad. Thirteen miles of this, from Clarksville to the State line, will be run in connection with the Edgefield and Kentucky road, and upon the remaining sixty-eight miles two parties are now engaged in laying rails, two more are to be put on in the fall, and the officers of the road confidently count upon completing it during the present year. A branch of the Louisville and Nashville Railroad, running from Bowling Green to the State line, a distance of fifty miles, and which is to be completed by November, and the Louisville and Nashville road from Bowling Green, will form a perfect railroad connection between Memphis and Louisville.

New Route West.

We learn that the New Jersey Central Railroad have made new arrangements and connections with the Lehigh Valley, the East Pennsylvania, and Reading Railroads, for runing an express train, by which Harrisburg can be reached in six hours and forty minutes from this city. The new time-table arrangement will go into effect on Monday, the 28th inst., on and after which date an express train will leave New York daily at 6 a. m., pass Reading at 10:40, and arrive in Harrisburg at 12:47 noon, in time to connect with the Pennsylvania Railroad train going West.

Grand Rapids and Indiana Railroad.

From Mr. Wildes, Chief Engineer, we learn that twenty miles of the Grand Rapids and Indiana Railroad, from Cedar Springs to Muskegon, have been located and surveyed. Members of the engineer's party speak in glowing terms of the country through which they have passed, it being a very fertile soil and heavily timbered, and so level that the grading will be very light. Indeed, it is expected that $60,000 will be sufficient to grade, bridge, and lay the ties the whole distance. The Board of Directors hold a meeting in Kalamazoo on Tuesday next, and, as they have received some bids for grading, the job will probably be let at

that time, and the work pushed as rapidly as practicable.—*Grand Rapids, Enquirer, May* 18.

Railroad Earnings.

The following is a comparative statement of the earnings of the North Pennsylvania Railroad Company:

Earnings in April, 1860	$32,280 56
Do. do. 1859	28,781 95
Increase	$3,498 61
In first five months of fiscal year	$149,687 81
Same months last year	129,034 07
Increase	$20,653 74

The receipts of the Grand Trunk Railway of Canada, for the week ending May 5th, 1860, were | $60,329 62
Corresponding week, 1859 | 46,923 76
Increase | $13,405 86
Total traffic from July 1, 1859 | $2,467,946 65
Do. for same period last y. | 1,947,566 45
Increase | $520,380 20

The earnings of the Pennsylvania Railroad for the month of April, 1859 and 1860, were as follows:—

	1860.	1859.
Passengers	$143,326 75	$145,677 58
Freight	358,231 56	307,831 18
Sundries	10,749 28	8,917 02
Total	$512,307 59	$462,425 79
Increase in 1860	$49,881 81	

For four months of 1860:

	Passengers.	Freight.	Sundries.
January	$87,566 85	$274,111 92	$5,020 73
February	97,745 36	301,438 54	10 512 34
March	143,488 43	431,518 78	6,820 07
April	148,326 75	358,231 56	10,749 28
Total	$472,127 62	$1,365,300 80	$33,202 92

	Total.
January	$366,699 40
February	409,796 74
March	581,327 28
April	512,307 59
Total	$1,870,631 10

Earnings from January 1, to May 1, 1860, compared with the same period of 1859:

	1860.	1859.
Passengers	$472,127 38	$497,417 62
Freight	1,365,300 80	1,225,422 80
Sundries	33,202 92	38,213 76
Total	$1,870,631 10	$1,789,053 68
Increase		$81,577 32

The earnings for March, ($581,827 28) 1860 are greater than those of any single month before in the history of the road except April, 1856, the earnings for which exceeded $601,000. The earnings for the first four months of 1860 exceed those of the same period in any previous year since the opening of the road to business.

The following is an abstract from the report of the receivers of the Central Ohio Railroad for March:

RECEIPTS.

To balance, as per last report		$22,935 17
From mail re'ts prior to May 1, 1859		8,522 73
From passengers business	$22,160 79	
From freight business	40,802 02	
From express business	1,651 22	
From mail business	16,711 74	
From mileage on cars	781 48	
From other sources	184 15	
		82,291 40
		$113,749 30

DISBURSEMENTS.

Payments made for liabilities incurred prior to March, 1860	$58,865 56
Expenses of transportation department.	9,407 18
Expenses of machinery department	10,875 57
Expenses of road department	11,832 69
Expenses of construction department	1,815 71
Fuel	5,096 64
General expenses	1,483 05
Total	$99,376 40

Liabilities incurred in March and remaining unsettled, $18,974 66.

The following are the earnings of the Indianapolis and Cincinnati Railroad in April:

April, 1859	$29,555
" 1860	35,200
Increase	$5 645

The following are the earnings of the Great Western Railway for the week ending May 11th, 1860:

Passengers	$18,291 08
Freight and live stock	16,650 86
Mails and sundries	1,337 10
Total	$36,279 04
Corresponding week of last year	34,029 40
Increase	$2,249 64

The following are the earnings by the Chicago, Burlington and Quincy Railroad for the second week in May, exclusive of earnings for excursion trains, were in—

	1859.	1860.
Freight	$15,466 36	$44,945 00
Passengers	8,818 55	9,738 75
Totals	$24,284 91	$54,683 75
Increase	$30,398 84	
Add increase for first week in May	20,572 93	
Total increase for first half of May	$50,971 77	

The following statement shows the business of the Philadelphia and Reading Railroad Company for the month of April:

	1860.	1859.
Received from coal	$169,773 22	$134,514 98
Do. merchandise.	53,114 64	47,537 18
Do. travel, etc.	84,282 42	33,422 43
	$248,110 28	$215,475 59
Transportation, roadway, dumpage, renewal Fund, and all charges	130,102 65	112,374 83
Net profit for the m'th.	$118,007 63	$103,089 73
Do. for previous 4 mos.	344,395 66	295,959 77
Total net profit for 4 months	$462,403 29	$399,059 73

Already the net profits for the first five months of the year to the end of April is about $63,000 over what it was to corresponding time last year. The increase is in every item of the report, and this, too, with a very slight increase of transportation, dumpage, renewal fund, etc.

The earnings of the Great Western Railroad Company of Illinois were:

March, 1860	$37,028 27
April, 1860	35,890 31
Total	$72,918 58

The earnings of the Sandusky, Mansfield and Newark Railroad Company were:

March, 1860	$12,927 02
April, 1860	13,787 88
Total	$26,714 90

The earnings of the Pacific Railroad of Missouri for April were as follows:

	1860.	1859.
Passengers	$31,182 63	$27,646 55
Freight	23,902 60	31,902 32
Mails	2,037 50	2,100 00
Total	$57,122 73	$61,648 87
SOUTHWEST BRANCH.		
Passengers	$470 40	$1,921 55
Freight	541 69	2,116 35
Total	$1,012 09	$4,037 90

Cincinnati, Wilmington & Zanesville R. R.

The election of directors of this road took place at Lancaster, on the 17th inst. The gentlemen chosen were: J. A. Adams, P. Bartram, N. Sleigh, D. Tallmadge, W. Griswold, — McCrea, D. McLean, Wm. Fife, and — Quinn.

Marietta and Cincinnati Railroad.

It is stated, with some appearance of authority, that Mr. FERNIE, of London, England, who, with Mr. ROBERTSON and other parties interested in the re-organization of the Marietta and Cincinnati Company, have been in town for several days past, is about to have a thorough examination of that line, made by competent parties, with a view to the commencement of operations for putting the road bed, as well as the equipment, in complete condition. The great improvement in the earnings of the Marietta and Cincinnati during the last eight months, has materially changed the views of the European as well as American bond-holders, and given a new value to the Company's securities and in the new organization. It is a fact, worth noting in this connection, that there is not a road in Ohio—the Cleveland and Pittsburg and the Cincinnati, Hamilton and Dayton excepted—that is to-day capable of making a higher speed, with safety, than the Marietta line between Chillicothe and Loveland junction with the Little Miami. The through trains are almost always on time at either termini, and in one instance last week, were run at the rate of forty-eight miles per hour without any extra strain.—*Cin. Commercial, May* 22.

Tennessee Copper Mines.

The copper district in Tennessee lies in Polk county, in the south eastern part of the State, bordering upon the States of Georgia and North Carolina. Polk county is in the heart of the Cherokee Nation, from which the Indians were removed in 1836. Mining has been pursued for about ten years, with few facilities of labor or transportation, yet with favorable results. The "Union Consolidated Mining Company" has four furnaces in use, and four more under construction, to be ready in the spring. The mining area embraced in its operations is over 3,200 acres. The production of ore during the last seven months of 1859 was 4,079 tons, equal to 580 tons pure copper, worth at least $250,000. The yield this year is expected to double that of the last. A first semi-annual dividend is to be declared, payable July 1, 1860. The "Polk County Copper Company," organized in New Orleans, has purchased mines, and is preparing for operation on an extensive scale.

Railroads of the State of New York.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, May 26, 1860.

Improvement of Western Railroads.

The increased earnings of Western railroads are entirely due to a larger movement of produce over previous years. The following statement will show the receipts of grain at Chicago for 1860, to May 15, over corresponding periods of 1858 and 1859:

	1858.	1859.	1860.
January 9	190,550	61,293	156,237
January 16	176,540	79,291	231,852
January 23	177,680	72,350	333,095
January 30	147,623	84,971	321,288
February 6	96,664	136,778	241,886
February 13	160,054	183,298	288,130
February 20	173,008	178,847	254,601
February 27	232,123	112,056	188,588
March 6	190,090	101,260	131,993
March 13	232,142	84,794	230,129
March 20	127,772	77,726	481,498
March 27	115,062	182,185	299,576
April 3	172,443	155,379	281,266
April 10	330,184	181,914	442,748
April 17	319,637	129,686	428,919
April 24	310,759	168,945	529,977
May 1	678,682	185,433	514,584
May 8	497,514	213,831	836,293
May 15	493,612	228,403	677,333
Total, 19 weeks	4,832,139	2,563,440	6,568,887

The following table shows the difference in receipts of principal articles in the two years from January 1, to the present time:

	1859.	1860.	Increase.
Flour, bbls.	128,562	140,609	12,047
Wheat, bush.	769,016	1,176,585	407,500
Corn, bush	980,504	4,408,718	3,428,214
Oats, bush.	156,846	312,271	145,425

The crop of Indian corn the past year throughout the greater portion of Illinois was good. There is an active Eastern demand for it, at remunerating prices. Should good crops follow for two years to come, and a similar demand continue, we shall see a very different state in the West.

The Illinois Central Railroad will gain the most, as all that is wanting to ensure a rapid sale, and payments for its lands, is good crops and fair prices. One good crop will realize enough to the farmer to pay for his land at the highest prices asked by the company. The present change for the better is greatly to the advantage of this company, and will add largely to its receipts from land sales, the present year.

Macon and Augusta Railroad Company.

This company was organized at Augusta, Ga., on the 16th inst., by the election of the following named gentlemen as directors, viz:

S. D. Heard, Jno. Macmurphy, W. D. Bowen, J. R. Stoughton, Claiborne Snead, Jno. P. King, John Bones, Henry Moore, Robert Collins, Thos. M. Turner, and Wm. H. Goodrich.

The committee on subscriptions reported the following amounts of stock as having been taken:

By city of Augusta	$500,000
By citizens	122,000
By city of Macon	50,000
By county of Baldwin	60,000
By citizens of Hancock	125,000
By citizens of Jones	105,000
By citizens of Macon	50,000
	$1,013,200

In addition to the above it was reported that $15,000 had been taken by the citizens of Warrenton. The amount subscribed exceeds that required by the charter.

New Railroad Through Pennsylvania.

The people through the south-western portion of this State are moving for the construction of a new line of railroad, commencing at Harrisburg and running in a south-westerly direction, so as to form a connection, either with the Baltimore and Ohio, or Pittsburg and Connellsville Railroads. In furtherance of this object a convention was held this week at Harrisburg, composed of large delegations from the south-western counties of the State. Chief Justic Lowrie of the Supreme Court presided, assisted by a number of Vice Presidents.

The Hon. Jeremiah S. Black, District Attorney of the United States, together with Col. Shriver of New York City, and nine other prominent gentlemen, were appointed a Committee of Resolutions, who reported the following preamble and resolution, which was unanimously adopted:

Whereas, It has been made manifest to this convention, upon the most conclusive evidence, that a railroad from the City of New York to the Ohio river and the heart of the Great West, may be made for less than eight millions of dollars, and twenty equated miles shorter than by any other route now in existence through Pennsylvania, and one hundred and fifty miles shorter than by any route through the State of New York; therefore

Resolved, That a Committee of five persons be appointed for the purpose of laying these facts before capitalists and other persons who are interested in this great thoroughfare of trade, and inviting their aid to secure the speedy completion of this important enterprise.

The Committee was appointed and consists of Thos. Shriver, Isaac Hughes, John Cessna, A. P. Wilson and Nelson Reilly.

The route to be adopted we presume will be that occupied by the Shermans Valley Railroad.

Alabama and Florida Railroad.

The following named gentlemen have been re-elected directors of the Florida end of this road for the running year:

President—Wm. H. Chase.

Directors—F. Bobe, O. M. Avery, A. E. Maxwell, L. M. Merritt, E. E. Simpson, A. L. Avery, J. Sierra and Alex. McVoy.

The report of the President states that thirty-two miles being now open, there remains but thirteen miles of track laying to be completed to the line. No impediments on this section due to the want of preparation exist, either of the road bed or trestle work, to prevent reaching the State line by the first of July; and we are informed by the superintendent and chief engineer of the Alabama Company, that their road will be extended to a point sixty-five miles from Montgomery, and within fifty miles of the State line by the first of July next. The whole route will probably be completed within a year from the present time.

☞ WILLIAM H. BERRYMAN, Esq., has opened a store at No. 38 Harrison st., in this city, for the sale of BOILER PLATES and RIVETS, Tank, Angle and Bar Iron, Smoke Pipe, Boiler Tubes, etc.

Mr. Berryman's long experience as a practical *Machinist*, and manufacturer of *Boilers*, enables him from professional knowledge to select articles of the best description; so that, in filling orders

entrusted to him, he is enabled to give entire satisfaction, both in regard to price and quality.

Having made arrangements with some of the best manufacturers in Pennsylvania, he is enabled always to have a well assorted stock on hand, and to execute orders with punctuality and dispatch.

☞ The attention of Engineers, Conductors, etc., is invited to the advertisement of Messrs. TIFFANY & Co., in another column. According to the advertisement, an arrangement has recently been perfected by which they have obtained the exclusive sale in this market of the "*Charles Fordsham Watch.*" This watch is represented as the most accurate and durable of time-keepers. Having been tested by trials of extraordinary severity, Messrs. TIFFANY & Co. have no hesitation in asserting its superiority in every respect, over any watch that has ever come under their inspection. They refer by permission to a large number of gentlemen who have purchased the watch from them. Address Messrs. TIFFANY & Co., 550 Broadway, New York.

☞ Messrs. ROOT, RUST & CLARK, manufacturers and dealers in OILS, have removed from No. 51 Ferry St., to No. 215 Pearl St., New York, where they are prepared to fill orders for *Sperm*, *Elephant* and *Whale* Oils. They are also IMPORTERS of *Rapeseed* Oil—an excellent substitute for Sperm as a lubricator. Having been a very long time in the business, and having become thoroughly acquainted with the requirements of railroad companies, machine shops, etc., they are enabled to supply Oils adapted to their wants. Orders promptly filled, and at the lowest price. Address Messrs. ROOT, RUST & CLARK, 215 Pearl St., N. Y.

Stock and Bond Markets.

The closing cash prices at the New York Stock Exchange for each day of the week ending 23rd May, 1860, were as follows:

Bellefontaine Railroad Line.

This "Line" is composed of the *Bellefointaine and Indiana Railroad*, extending from Indianapolis to Union, 84 miles; and the *Indianapolis, Pittsburg and Cleveland Railroad*, extending from Union to Crestline, 122 miles—making the entire length of the "Line," 206 miles.

We are in receipt of the Fourth Joint Annual Report of the Directors of these roads—being the Tenth Annual Report of the former, and the Eleventh of the latter company. The fiscal year of these companies terminated December 31, 1859. The transactions of the two roads during the year are as follows:

BELLEFONTAINE AND INDIANA RAILROAD.

EARNINGS.

	204,859.99
Net earnings	$81,508 25
Interest and taxes	95,097 66
Deficit	$13,589 41

Compared with the previous year the gross earnings show a decrease of $45,858 46
The expenses an increase of 19,445 75

Making a decrease in net earnings $65,304 21

This loss of revenue is attributable to the almost total destruction of the crops on nearly the whole road by the frost of June, 1859; while it was impracticable to make a corresponding decrease in the expenses.

The company is still without Floating Debt The following is the General Balance Sheet December 31, 1859:

ASSETS.

Cost of road and equipment	$3,020,173 18
Real estate	68,044 97

Gross earnings of 1859	286,368 24
	$3,565,956 53

The first mortgage bonds of the company remain the same as last year. The issue of second mortgage bonds has been increased $29,000. By an arrangement with the holders, $14,000 of 8 per cent. preferred stock has been converted into second mortgage 7 per cent. bonds, and the stock cancelled. The amount of dividend declared in January, 1857, payable in second mortgage bonds was $73,000. Of these there had been delivered to January 1, 1858, $58,000; claimed during 1859, $3,000; leaving on hand, $12,000. This amount, though held subject to call, has been charged up to the issue of bonds, and these items constitute the increase of 1859. The amount of real estate bonds outstanding last year was $129,000. Of these bonds, due in 1861, the trustee has retired, during the year, $9,250, leaving now outstanding $119,750. The amount of Income bonds outstanding January 1, 1859, was 199,500; of these, $12,500 have been redeemed by the Sinking Fund—leaving $187,000; of which, $82,500 have been extended to January 1, 1870—leaving overdue and outstanding, $104,500.

The payments to the Sinking Fund for the redemption of these bonds were continued till December, 1859, when it became apparent that the revenues of the road for the year would fail to pay expenses, interest and taxes. Under these circum-

stances, the managers did not feel justified in continuing the payments, to the further embarrassment of the interest fund. There was due the Sinking fund, January 1, 1860, the sum of $2,500. These payments are not to be resumed until the interest fund is restored, and there is a surplus of earnings—which it is hoped will occur during the present year.

Interest and taxes	$75,607 67	
Interest and cost of floating debt	2,404 62	
Gravel ballast	3,763 94	
		81,776 23
Deficit		$1,666 61

Compared with the previous year, the earnings show an increase of $3,491 66
The increase in working expenses was 22,218 35

Making a decrease in net earnings of $18,726 69

Of the increase in working expenses, $17,463 01 is on account of track and bridge repairs. The former mainly from the substitution of new iron ties and chairs; the purchase of grounds, opening new gravel pits, and putting ballast upon the track. In this latter is included a new bridge at Yorktown, which was a matter of imperative necessity. Other items of an extraordinary character also contributed to swell the expense beyond those of the preceding year. Deducting these extra charges, the expenses proper show only a slight increase. During the current year, a large number of ties will be required; the renewal of iron must be increased; and several bridges will require liberal repairs or renewals.

The total floating debt as per last report was $27,113 72; of which $8,162 85 was paid during the year—leaving a balance of floating debt, Jan. 1, 1860, of $18,950 87. The company's balance sheet at the close of the year was as follows:

ASSETS:

Cost of road and equipment		$1,837,367 74
Lands and lots		65,325 64
Bills receivable		26,214 53
Stock of Col., Piqua and Ind. R. R.		10,000 00

Gross earnings of 1859		236,397 11
Individual accounts		14,293 38
Due to other roads		403 85
Cash account		57 56
		$2,272,336 88

The first mortgage bonds have been reduced during the year by cancelling $5,000 exchanged for second mortgages, and $500 paid on a matured bond. The second mortgage bonds, which amounted at the commencement of the year to $168,500, have been increased by an issue of $6,000 in exchange for $5,000 of first mortgages, and exchange of $139,500 for the same amount of income bonds at par. The income bonds have been reduced a corresponding amount. Of the first mortgage bonds, the trustee holds $45,000 on account of the sinking fund.

As the first mortgage bonds of the company were approaching maturity, and its financial condition precluded the hope of meeting them promptly, the board of directors, in October last, referred the matter to a special committee with full authority to negotiate an extension of the time of payment. Accordingly a proposition was submitted to the bondholders to extend the time of payment for ten years from the 1st of January last. This proposition has been accepted by a portion of the bondholders; and no doubt is entertained that it will eventually be acquiesced in by all of them.

President—THOS. A. MORRIS.

Directors—John Brough, Simon Yandes, James W. Yandes, Thos. A. Morris, Thos. H. Sharpe, Edward King, M. G. Walker, Allen Makepiece, D. Kilgore, Stillman Witt, Henry Wick, Joseph Chamberlain, Selah Chamberlain, A. B. Stone, James H. Godman.

Secretary—EDWARD KING.

Treasurer—THOMAS H. SHARPE.

California.

Railroad "from" the Pacific.—The Legislature of California has passed bills authorizing San Francisco to take $600,000, San Mateo county $100,000, and Santa Clara county $200,000 in stock of the San Francisco and San Jose Railroad. This road through the Santa Clara county is viewed as a link in the chain connecting the Atlantic with the Pacific States.

Central New Jersey Railroad.

By the recent conversions of New Jersey Central Railroad second mortgage bonds into stock, the bonded debt has been reduced from $3,000,000 to $2,100,000; all other indebtedness, $238,000 extinguished, and the stock increased from $2,500,000 to $3,630,000. The stock and balance of mortgage bonds represent the entire property of the company, there being no other debt. The company have been making semi-annual dividends at the rate of ten per cent. per annum. After the next dividend in July, it has been decided to make the dividends quarterly.

Florida Railroad.

NEW ROUTE TO THE ATLANTIC STATES.—The completion of the railroad across the isthmus of Florida, on the 20th instant, has been duly announced.

This is an enterprise in which the people of New Orleans have a great interest. It is likely to affect, very materially, the routes and the rates of importation from the Atlantic States to New Orleans, and in some degree the rates of travel. Mr. Yulee, U. S. Senator from Florida, is the President of the company, and has, for five or six years, given unremitted attention to its interests, by which he has at length brought it to a successful completion. It forms part of the route for which application was made last season to the Postmaster General for a contract to bring the great Northern mails now transported by the central railroads in Virginia, Tennessee, and Mississippi.

The railroad extends from Cedar Key, on the Gulf of Mexico, in about the same latitude as New Orleans, and about seven degrees of longitude east of us, to Fernandina, on the Atlantic. The line from New Orleans to the Atlantic does not vary more than one degree from a straight line from east to west. The lenght of the road is 138 miles. The whole distance from New York to New Orleans is computed thus: to Fernandina, by steam 761 miles; thence to Cedar Key, 138; thence to New Orleans, 399; total, 1,298; of which 128 are by railroad, and 1,260 by steam. We believe the mail transportion project was to use the seaboard railroads to Charleston, thence by steamer to Fernandina.

The company have made their calculations that using the railroads now in operation, via Baltimore, Washington, Wilmington, &c., the distance to New Orleans can beper formed with ease in 75 hours (3 days 3 hours), and on the completion of some railroads in progress, in 65 hours (2 days 17 hours.) This assumes a rate of speed by steamboat, from Charleston, at 18 miles an hour, and on the Gulf at 20. At the more moderate rate of 15 miles an hour, and with the railroads now existing, the longest period estimated by them is 3 days 11 hours. The same time is estimated as the longest by water from New York to Fernandina, and they announce that they have the highest steamboat authority and guarantee for a speed which will make the trip uniformly in two days and nineteen hours.

These are very confident assumptions—more, perhaps, than can be maintained in the regular use of the route. The uncertainty of sea and gulf navigation are a disturbing element, entirely overlooked in the calculation. But there is enough in the facts and calculations to draw the attention of the people of New Orleans to the new channel opened to them, especially for the rapid transportation of light freights, perhaps eventually for a change in the direction and cost of bulky importations. The delays and dangers of the navigation around the Capes of Florida, are very heavy burdens on the trade of New Orleans, and a great element of advantage to shipments for the West, by the Northern railroads.

The cost of insurance alone on the sea risks is an enormous item, which would nearly disappear on shipments by the safe coast navigation, and the inland passage across the neck of the Isthmus. Senator Yulee and other friends of that oad have,

from time to time, examined these points with great minuteness, and made statements which, if they only approximate to accuracy, are surprising. They estimate that freights from New York can be delivered by this route with equal speed, at rates much less than by the inland railroads, and with fewer re-shipments.

The subject is, as we have said, well worthy of the careful study of our citizens, with the view of seeing how far it may be made serviceable to the interests of the South-west, and this, its chief emporium of commerce, and what steps may be necessary to take advantage of these new facilities, and turn a larger share of the trade of the South-west through the city of New Orleans.—*N. O. Picayune.*

The Lexington and Big Sandy Railroad.

The Lexington and Big Sandy Railroad, with all its appurtenances, will be sold under a decree of the Fayette Circuit Court on the 27th of June.

Cheshire Railroad.

The Keene, N. H. *Sentinel* says that provision has been made for the punctual payment of the bonds due in July. The road is now relieved of every pressure, and the stockholders feel sensibly the increasing value of the property. Net receipts, last year, over all expenses, including interest paid, $71,576. Decrease of indebtedness $83,873.

CHARLES FRODSHAM WATCHES.

TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the

EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH

to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.**, after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

12.	" 18	"	1 to 1	24.	" 32 "	"	1¼ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO., New York, May 15, 1860.

OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY, March, 1860.

The holders of the Bonds of this Company, due July 1, 1860 can now receive, upon application at this office, 10 per cent. in cash, upon the terms specified in the Circular attached.

The holders are also entitled to the benefit of a Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,308,400. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.

The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.

A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.

Terms of receipt and endorsement will be furnished on application.

By order of the Board of Managers.

1m15 W. H. McILHENNY, Secretary.

Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—
1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.
2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**
3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**
4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.
5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**
6th. It will remain limpid at as low a temperature as sperm.
CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and
WILL NOT GUM.
In no case has it failed to meet the approval of the consumer.
The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor
F. S. PEASE, 61 Main st., BUFFALO.
Reliable orders filled for any part of the United States or Europe.

W. H. McVICKAR, President.

CEMENTS.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime**, and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT**, branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels**, and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE**, Secretary, 90 Wall st., N. Y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER, and MARBLE DUST**, all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to **give entire satisfaction.** Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.**, or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing,

WM. N. BEACH, President.

CHAS. E. LAWRENCE, Sec'y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

THE HUMPHREYSVILLE

MANUFACTURING COMPANY,

(SUCCESSORS TO DWIGHTS, FRENCH & CO.,)

SEYMOUR, CONN.,

ARE prepared to fill, at short notice, of the best materials and workmanship, orders for **Wrought** and **Cast Iron Work,** fitted ready for use, for the building or repairs of **Passenger** and **Freight Cars,** complete or in part. A sample wrought iron truck can be seen at our office.

No. 5 Gold st., NEW YORK.

We also manufacture—

BEST FAGGOTTED CAR AXLES,
SALISBURY IRON CAR WHEELS,
WROUGHT IRON BOLTS, NUTS AND WASHERS,
RAILROAD JACK SCREWS, ETC.

RAYMOND FRENCH, President, Seymour, Conn.
WM. H. MARSHALL, Treasurer, No. 5 Gold st., N. Y.

STEEL

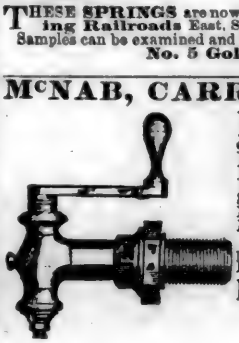
CAR SPRINGS,

MANUFACTURED

BY THE

PATENTEE,

CARLOS FRENCH,



SEYMOUR, CONN.

THESE **SPRINGS** are now in use on many of the **leading Railroads** East, South and West.

Samples can be examined and Price Lists obtained at

No. 5 Gold st., NEW YORK.

McNAB, CARR & HARLIN,

MANUFACTURERS of Steam Engine Builders' and Plumbers' **BRASS WORK,** such as Globe Valves, Safety Valves, Pump Valves, Whistles, Oil Cups, Steam and Water Gauges, Bibbs, Stops, Basin Cocks, Hose Pipes and Couplings, etc.

All parties interested will please send for Catalogue and Price List. Address

McNAB, CARR & HARLIN,

16 John st., NEW YORK.

PHILIP S. JUSTICE,

21 North Fifth St., Phila. 54 Cliff St., New York. 152 Congress Street, Boston.

English Railway Springs,

MANUFACTURED OF

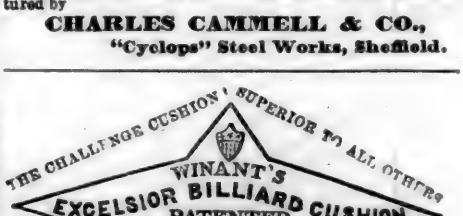
Best Double Faggotted and Improved Cast-Steel

EACH SPRING TESTED.

FOR FREIGHT

AND PASSENGER CARS,

LOCOMOTIVE ENGINES,



ETC.

EXTRA CAST STEEL FOR TOOLS AND DRILLS, "CONCENTRIC" SOFT CORE TAP STEEL, (warranted not to crack in hardening,) best double Faggotted and Cast SPRING STEEL, ribbed and plain; Machinists' Files, "Crescent" Faggotted Axles, Wrought Locomotive and Passenger CAR WHEELS, Homogeneous Metal, etc. Manufactured by

CHARLES CAMMELL & CO.,

"Cyclops" Steel Works, Sheffield.

Southern Railroads.

In the first number of the AMERICAN RAILROAD JOURNAL for the present year (January 7, 1860) we gave, as it has been our practice for a series of years, a complete list of all the railroads in the United States, compiled from authentic sources, at an expense to ourselves of both time and money, It was intended that this table should, and we believe it did, give every mile of road in actual operation at that time. This table was divided by States—giving the length of each line in each State separately. But in footing up the columns, only those roads were included in the totals that were in their greater length within a State. The *United States Economist* in its eagerness to disseminate information, no matter from what source it was obtained, took from our JOURNAL the *footings* of thirteen of these States, and sent them forth to the World as the correct mileage and cost of the railroads in those States. The table in the same form also appears in *Hunt's Merchants Magazine* for May, and has been copied by almost every paper in the country. As the figures are our own, we cannot dispute them, nor do we desire it, though they were intended for an entirely different purpose than the use to which they were so unceremoneously appropriated. The following is the table in question:

States.	Length.	In operation.	Cost.
Virginia	2,058.5	1,525.7	$43,069,390
North Carolina	1,020.0	770.2	13,998,495
South Carolina	1,136.0	807.3	19,083,343
Georgia	1,617.2	1,241.7	25,687,220
Florida	730.5	289.8	6,368,699
Alabama	1,822.4	798.6	20,975,639
Mississippi	445.1	365.4	9,024,444
Louisiana	1,160.0	419.0	16,073,270
Texas	2,667.0	284.5	7,578,943
Arkansas	701.3	38.5	1,130,110
Missouri	1,337.3	723.2	31,771,116
Tennessee	1,434.4	1,062.3	27,348,141
Kentucky	698.4	458.5	13,852,062
	16,828.1	8,794.8	$235,960,842

Side by side with the recapitulation of our tables, from which the above was abstracted, is another, giving the *actual* mileage in the several States. This was either overlooked or misunderstood by the *Economist*. From this we copy the following—selecting the same States as in the above table; to which we have added a column, giving the approximate cost of the actual mileage in each State:

	Mileage as arranged in tables above.	Mileage given to other States.	Mileage taken fr. other States.	Actual mileage belonging to each State.	Approximate cost of actual mileage in each State.
Virginia	1,525.7	34.0	264.0	1,755.7*	$35,931,357
North Carolina	770.2	107.0	40.0	703.2	12,870,282
South Carolina	807.3	6.0	99.0	900.3	20,578,954
Georgia	1,241.7	13.2	15.0	1,243.5	25,587,633
Florida	289.8	0.0	0.0	289.8	6,368,699
Alabama	798.6	329.7	169.0	638.9	15,733,073
Mississippi	365.4	10.5	336.2	691.1	17,667,007
Louisiana	419.0	125.0	0.0	294.0	11,308,596
Texas	284.5	0.0	0.0	284.5	7,578,943
Arkansas	38.5	0.0	0.0	38.5	1,130,110
Missouri	723.2	0.0	0.0	723.2	31,777,116
Tennessee	1,062.3	202.0	117.2	977.5	26,060,980
Kentucky	458.5	26.5	78.5	510.5	15,320,407
	8,784.7	---	256.0	9,040.7	$247,921,157

The footings of the latter table do not, of course, vary very materially from those of the former. But, as represented in the *Economist*, it is to the individual States a great injustice. For instance: North Carolina has 67 miles given to her, which do not belong to her at all; Alabama, 167.7; Louisiana, 125; Tennessee, 184.8—making an aggregate of 546.5 miles belonging to other States. While from Virginia there is taken 230 miles; from South Carolina, 93; from Kentucky, 52; from Georgia, 1.8; and from Mississippi, 325.7. The difference in the cost will be readily seen by comparing the figures in each table. It is impossible to arrive at a correct understanding of these tables by merely seeing copies of detached portions of them; and editors of such papers as are too indolent to compile them for themselves, or too *economical* to employ others to do it for them, had better confine their attention to others items of information, which can be condensed into a smaller compass without detracting from their merits, and in doing which they will not be so liable to err.

* In this State are included portions of the Pittsburg and Steubenville, Baltimore and Ohio, and the Hempfield Railroads, together 256 miles, given in the original tables under Maryland and Pennsylvania.

North Missouri Railroad.

Instructions have been given by the directors of this road to have the grading North of the Hannibal and St. Joseph Road completed. It will be commenced immediately, and when completed, will carry the road to a point within thirty-nine miles of the Iowa boundary.

Coal-Burning on the Pennsylvania R. R.

(Continued from p. 440.)

COMPARATIVE ECONOMY OF COAL AND WOOD FOR PASSENGER TRAINS.

To solve this problem, it is necessary to ascertain—

1st. The relative heating value of a ton of coal and a cord of wood.

2d. The relative cost of the same delivered on the tender.

3d. The increased cost of locomotive repairs due to the substitution of coal for wood.

First. RELATIVE HEATING VALUE.—The trials to determine the relative heating value of coal and wood were made with a new passenger engine, No. 156, having what is generally known as the "Smith" or "Hudson River Railroad plan" of boiler. Its peculiarities were a large, deep fire-box, a combustion chamber 4 feet long, and a considerable admission of air over the fire through 24 hollow stay-bolts in the back leg of the fire-box, and about 100 perforations in the door. There were also 10 apertures for the same purpose at each side of the door. The diameter of the latter was ¾ inch, that of the others ½ inch. The engine was provided with a blower, an ordinary wood chimney, with spark arrester, and a variable exhaust, the latter not used on the trials in consequence of being out of order. The combustion chamber was divided for half its length into two

equal apartments, by a longtitudinal midfeather 6 inches wide, leaving it of the full width of the boiler from the end of this midfeather to the flue sheet.

The weight of this engine ready for service was	63,800 lbs.
Weight of driving wheels	40,675 "
Diameter of cylinders	16 inches.
Stroke	24 "
4 driving wheels, diameter	5½ ft. each.
Heating surface, including flues	779.7 sq. feet.
" " counting flues as of ⅓ value	357.7 "
Grate area	15.87 "
200 flues, 7 feet 2 inches long, and ⅛ inch inside diameter.	

This engine had been tried on the Philadelphia Division of the road, and was found to emit too much smoke and dirt, even when using Broad Top (semi-bituminous) coal, to permit it to go into regular service with passenger trains, in its then condition. It should be mentioned that on those trials a small arch of fire-brick was placed across the front part of the fire-box, below the combustion chamber; but that it was not attached at the time of the experiments, whose results are now to be stated.

This engine being as well fitted for an economical consumption of wood as of coal, was considered the best that could be selected to test their comparative efficiency. It was first tried and the consumption ascertained with both kinds of fuel, after which it was altered to avoid smoke, and tried again with coal. The combustion of wood with the engine in its original condition was quite perfect, much more so than in ordinary wood-burning engines; but for coal, the arrangements for supplying air to the gases were deficient. When these were provided in the manner hereafter described, the smoke was almost entirely obviated, and the loss of fuel from imperfect combustion reduced below an amount deserving consideration. The additions referred to consisted simply of a perforated deflector and air-distributor of fire-brick, placed across the fire-box, together with two brick walls or bridges, one hanging from the crown above the deflector, and the other standing in the combustion chamber at its mouth. The plan was similar to that of Mr. Gill, heretofore described, except that *fire-brick* was used as the material through which to jet air upon the gases, instead of copper sheets inclosing a water space. The bonnet was removed, and the engine run with a straight stack unobstructed, which permitted the enlargement of the single exhaust nozzle from 3⅝ to 3⅞ inches.

The trials were made on the mountain grade of 95 feet per mile, between Altoona and the Summit, a distance of 12 miles; the train consisting of 4 loaded eight-wheeled freight cars, which were drawn at passenger train speed, 20½ miles per hour, up this grade.

Weight of cars	34½ net tons.
do. loading	37 "
Total weight of train	71½ net tons.

Weight of train, including engine and tender, 118 net tons.

The same cars were retained for all the trials, as were also the same engineer and fireman; and the weather, condition of the rail, &c., did not materially vary throughout the trials.

The wood was *oak*, and was not taken as measured out at the wood station, but ranked separately, in order to get true cords of 128 cubic feet each. It was also weighed. 400 lbs. of wood were used for kindling on each trial, and are not included in the statement of the amount consumed in the case of either the wood or coal trials, and no credit is given for the fuel left in the fire-box at the end of the trips. While the distance run may seem short, it must be remembered that the heavy gradients caused a consumption equivalent to that usual on a line four times as long with moderate grades, and that the results are an average of several trials,

The following are the results obtained:

Distance.	Average consumption.	Water evaporated. Averaged.
With Pittsburg Coal.....12 miles.	1,073 lbs.	6,480.92 lbs.
With dry Oak Wood (chiefly White Oak,) weigh'g 3,500 lbs. per cord. 12 miles.	2,483 lbs.	6,748.12 lbs.

It appears from the above—

1st. That the average consumption was 89.42 lbs. per mile of Pittsburg coal, against 206.92 lbs. per mile of hard wood.

Hence 1 *pound of coal is equivalent in heating power to* 2.31 *pounds of wood.*

2d. The weight of 128 cubic feet of this wood being 3,500 pounds, it follows that 1 *net ton of coal is equal to* 1⅓ *cords of wood.*

3d. Taking the evaporation of water as a standard, we have for 1 pound of Pittsburg coal, an average evaporation of 6.04 pounds* of water, and for 1 pound of oak wood, an average evaporation of 2.72 pounds* of water—which would make 1 pound of coal equivalent to 2.22 pounds of wood, and 1 net ton of coal equivalent to 1.27 cords of wood.

The last result differs slightly from that based on the consumption per mile. On a short trip, the difficulty of measuring with accuracy, (by means of the gauge cocks only,) the water in the boiler, would make this standard less reliable than the former. We shall, therefore, assume as the basis of our calculations, that 1 *pound of Pittsburg coal is equivalent in heating value to* 2.31 *pounds of hard wood, and that* 1 *net ton of coal is equivalent in heating value to* 1⅓ (*one and one-third*) *cords of hard wood.*

It will be said that this result gives a less comparative value to coal than has been obtained in many other experiments, and less than it has been customary to estimate it. A series of trials made on this road, in 1851, showed one gross ton of Alleghany coal (inferior to Pittsburg for locomotive purposes) to be equivalent to 2½ cords of wood. But besides the fact that the wood was taken as it occurred at the sheds, being a mixture of hard and soft varieties, and with, probably, no particular care to ensure accurate measure, those experiments were subject to the exigencies of regular traffic.

I believe that good hard wood has been generally underrated in the experiments which have been made on various railroads to determine its value in comparison with coal. This may be partially accounted for by the absence of care to select an honest cord, of an uniform quality; and, perhaps, by the fact that as these trials have usually been made with trains in regular service, the duty performed by the two fuels may have varied considerably, though the number of cars remained the same. In some cases, also, inequality of firing and engineering may have created a difference of from 10 to 20 per cent. But the chief source of inaccuracy probably lies in the fact of the trials with wood and coal being commonly made with different engines; those intended to burn the latter being usually new and large, and possessing features which fit them for a more perfect combustion of fuel and absorption of heat, than the wood engines. A *combustion chamber*, for instance, is equally as well adapted to produce an improved combustion of wood as of coal, and it would not be fair to test the coal in an engine provided with such a chamber, and the wood in one without it.

As our result was obtained by trials of the two kinds of fuel in the same engine, (the combusion of both wood and coal being nearly perfect;) the engineer and fireman, train, road, speed, condition of rail, weather, etc., being uniform, and the wood selected of one quality and carefully measured, I believe that it may be relied upon as practically correct. It corresponds closely, also, with the results of actual working for a number of years on the Reading Railroad, (as stated by Superintendent Nichols,) where five net tons of anthracite are used to draw an ordinary coal train from Pottsville to Richmond; the amount of wood required for the same purpose being 6½ cords—at which rate one net ton of coal would be equivalent to 1.35 cords of wood.

Second.—Relative Cost of a Cord of Wood and a Ton of Coal. As this varies for each of the three divisions of the road, into which the service with passenger engines is divided, the cost will be stated separately for each.

The annexed table will show the estimated cost of *hard wood*, including the ordinary expenses of the trains engaged in hauling wood to the several stations, and all other expenses connected with this fuel, until it is delivered on the tender.

Cost of Hard Wood on Pennsylvania R. R. Per Passenger Engines,

Stations.	Price delivered at stations.	Labor of preparing wood.	Other expenses at stations, including delivery to tender.	Loss and unaccounted for, discrepancies in rank'g, &c.	Total cost delivered on tender.
Division fr. Pittsburg to Altoona.	Per cord.	Per cord.	Per cord.	Per cord.	Per cord.
Pittsburg	$2 00	$0 40	$0 05	$0 12½	$2 57
Latrobe	1 75	0 37½	0 05	0 12½	2 30
Ninevah	1 75	0 37½	0 07	0 12½	2 32
Wilmore	1 62½	0 37½	0 06	0 12½	2 19
Altoona	2 00	0 37½	0 06	0 12½	2 56
Average cost, delivered on tender					$2 39
Division from Altoona to Harrisburg.					
Altoona	$2 00	$0 37½	$0 06	$0 12½	$2 56
Huntingdon	2 00	0 37½	0 12	0 12½	2 62
McVeytown	2 00	0 37½	0 15	0 12½	2 65
Lewistown	2 00	0 37½	0 07	0 12½	2 57
Newport	2 25	0 37½	0 06	0 12½	2 81
Harrisburg	2 50	0 40	0 10	0 12½	3 12
Average cost, delivered on tender					$2 72
Division from Harrisburg to Philadelphia.					
Harrisburg	$2 50	$0 40	$0 10	$0 12½	$3 12
Elizabetht'n	3 00	0 45	0 10	0 12½	3 68
Leaman Pl.	3 30	0 45	0 14	0 12½	4 01
Downingt'n.	3 50	0 45	0 10	0 12½	4 18
Philad'phia	4 00	0 30	0 10	0 12½	4 52
Average cost, delivered on tender					$3 90
Average cost over whole road, of Hard Wood, delivered on tender					3 00

(Which includes every expense except that of repairs to engines and cars engaged in hauling wood, and of maintenance of way due to such transportation.)

That the above estimate of $3 per cord as the average cost of hard wood for passenger engines on this road, is not overstated, is sufficiently proven by the fact that the total cost of wood, and of hauling and preparing wood, on the road for 1858, was $162,745 80, and the total amount consumed 58,133 cords. This gives an average of $2 80 per cord, which, however, includes a certain proportion of soft wood, chestnut, pine, etc., whose cost is from thirty to sixty cents per cord less than oak. After making this allowance, and that required in consequence of a greater relative consumption of wood, where it is cheapest, on the Western Division, (due to the use of wood by several freight engines on that part of the road,) the rate found will approximate closely to $3 per cord, as above stated.

The average cost of coal on each division of the road, including transportation and all other ex-

* This must not be considered as any index to the actual, but only to the relative evaporative power of coal and wood. There were several reasons why the absolute results would be small on a trial of this kind.

penses, until it is delivered on tender, will be found in a detailed statement of the accompanying report on the comparative value of Pittsburg and Broad Top coals. The general results, however, are transferred to the annexed table showing the

Comparative Cost of Wood and Coal on Pennsylvania Railroad.

For Passenger Engines.

Division of road.	Distance—miles.	HARD WOOD, delivered on tender, per cord of 128 c. ft.	PITTSBURG COAL, delivered on tender, per ton of 2,000 pounds.	BROAD TOP COAL, delivered on tender, per ton of 2,000 pounds.	PITTSBURG COAL, bet. Pittsb. and Harrisb., and BROAD TOP COAL, bet. Harrisb. and Phila., per ton of 2,000 pounds.
Between Pittsburg and Altoona	116	$2 39	$0 90	$2 15	$0 90
Between Altoona and Harrisburg	132	2 72	1 82	1 89	1 82
Between Harrisb'g & Philadelphia	106	3 90	2 81	2 62	2 62
Average cost over whole road	354	$3 00	$1 84	$2 22	$1 78

We have now determined the comparative heating value of coal and wood in passenger locomotives, and the cost of each on the several divisions of the road. To ascertain the amount of coal required to run an ordinary train over each of these divisions, which vary in respect of gradients, curves and other characteristics as well as to test the practical working of a coal burning passenger engine in all varieties of service, the same engine, No. 156, fitted up as before described, was run with the regular trains, both ways over the entire road. The engineer was different for each division, but the fireman uniform, (the regular passenger firemen not being accustomed to the use of coal.) For a number of reasons, these results, although highly favorable, in view of the high speed and the character of the grades and curves, are in my opinion less so than those which will be regularly obtained, when coal shall have become the adopted fuel.

(To be continued.)

Concord Railroad.

At the annual meeting of the stockholders of this corporation, held at Concord, N. H., on the 29th ult., the old Board of Directors, consisting of N. G. Upham of Concord, Isaac Spaulding of Nashua, Josiah Stickney of Boston, Charles H. Peaslee of Concord, Uriel Crocker of Boston, Francis C. Manning of Boston, and John S. Kidder of Manchester, N. H., were elected for the ensuing year.

Tredegar Iron Works.

The New Orleans *Delta* contains a notice commendatory of the well-known iron works of Messrs. JOSEPH R. ANDERSON & Co. of this city. It speaks in terms of high praise of the railroad and plantation machinery turned out by the TREDEGAR Works for use in the Southern States, (of which, by the way, a large quantity is used in Louisiana, as witness the frequent shipments of hardware hence in that direction.) The *Delta* says the TREDEGAR iron is manufactured from Virginia ore, "consequently they are the only independent Southern machine works in this trade." An agency has been established in New Orleans for the sale of articles manufactured at this well known foundry, and the *Delta* adds: "The proprietors of the TREDEGAR Works only claim a fair trial for their machinery, whether for railroad or plantation use, in competition with any other machinery for a similar purpose."—*Richmond Examiner.*

Little Miami and Columbus and Xenia R. R.

We have received the Fourth Joint Annual Report of the Directors of these companies—being the Seventh Annual Report of the *Little Miami*, and the Tenth of the *Columbus and Xenia*. These roads are worked together as one, under the direction of one Superintendent. The entire equipment is held by the companies in common; each owning in the same ratio as the capital stock of each bears to the aggregate capital of both. The gross earnings of each road, together with the income from rents, franchises, etc., are added together, and after deducting therefrom the current expenses of operating both roads, including repairs, renewals, interest, etc., the residue is applied first to the payment of dividends, which are at all times to be equal, and the surplus, if any, divided between the two companies, or otherwise disposed of as the two Boards shall elect. But one report is issued, covering the operations of both companies.

During the fiscal year ending November 30, 1859, the revenue from the joint operations of both roads was as follows, viz:

From passengers		$574,375 75
" freight		643 672 59
" mail and express		58,706 37
		$1,276,754 73

And the expenses were:

Repairs of road	$142,964 31	
" locomotives	54 507 41	
" cars	77,157 79	
" bridges	5,900 87	
" depots, etc	20,845 48	
Oil, tallow and waste	14,039 06	
Fuel	76,802 34	
Rent, including lease of D. & X. R. R.	28 661 53	
Taxes	21,258 60	
Transportation expenses	253,765 94	
Loss and damage	10,618 60	
Stationary	6,658 07	
		709,820 00
Leaving as net earnings		$566,934 73
To which add dividends on C. & X. stock		38,488 00
		$605,422 73
Less interest account	$98,994 92	
Paym'ts on previous year's business	20,178 49	
Four passenger cars	9 595 31	
Profit and loss	18,350 44	
		147,119 16
Net profits		$458,303 57

The Little Miami Company's proportion of net profits was $305,535.71; and the Columbus and Xenia Company's proportion, $152,767.86.

Compared with the previous year, the gross earnings show an increase of $76,255 44
The increase in expenses was 120,425 82

Making a decrease in net earnings of $44,170 38
The net profits in 1858 were $512,386 83
In 1859 458,303 57

Decrease $54,082 26

It will be seen that while the gross earnings have largely exceeded those of any previous year, the expenses have also increased, and that too, in more than the ordinary ratio. In reference to this, the report, after alluding to the short crops for the two preceding years, and to the reckless and severe competition, which, for a time, reduced rates below any former period, says:

There have been some special causes affecting the amount of this expenditure. The low rates of freight before alluded to, have, of course, increased the ratio of expenditure in that department of service. In the next place, the peculiar condition of the road has required unusual outlays in repairs. In the third place, by a recent change in the law, but half the taxes were payable last year, while the full amount is payable this. Then a fourth item arises out of the lease of the Dayton, Xenia and Belpre Railroad, between Xenia and Dayton, which you will recollect was approved by the stockholders in December, 1858. The object of this lease was to perfect a line over your roads from Columbus to Xenia, and thence to Dayton, Indianapolis, and the West, thus securing to part of our line a large business, which otherwise would take a more northern route. We have operated this road for eleven months. Its direct earnings have fallen a little short of its expenses. But this experiment, before the route is fully known and established, is no test of the ultimate results; nor are its direct earnings by any means the whole profit of it. The rents on this lease are an item of the increase.

The lease above-mentioned also involved the necessity of an expenditure of $10,000 to effect a change of gauge on the Indiana Central Railroad, west of Dayton, for the more perfect accommodation of the business. This item is also a special expenditure. For a more accurate comparison of the ratio of operating expenses with those of former years, this item, with the two last stated above, amounting to $47,694 34, should be omitted.

The net profits of the year, after deducting all disbursements, other than construction and increased value of rolling-stock, are $448,303 57.

Out of this sum two dividends, of four per cent. each, have been made to each company, leaving a surplus of $90,536 12, or $60,357 42 for the L. M. Company, and $30,178 71 for the C. & X. Company.

The assets and liabilities of the joint company are as follows:

The equipment of the roads consists of 41 locomotives; 36 passenger cars; 16 baggage, mail and express cars; 341 box; 74 stock, and 99 platform cars.

The number of miles run by engines was 732,924; by passenger, 1,686,717; by freight cars, 5,395,162. The number of passengers, ticketed to and from foreign points, carried over the whole road, was 100,447; do., carried over portions of the road, 32,957—total, 133,404. The number of local passengers carried over the whole road was 13,970; do., over portions of the road, 196,406—total, 210,376. The number of passengers carried one mile was 20,386,650. Average income per capita without regard to distance, $1.67; do., per capita per mile, 2.82 cents.

The number of tons of through freight carried over the whole road to and from foreign points, was 176,332; do., local freight over the whole road, 25,398; do., over portions of the road, 101,881—total tons transportation, exclusive of express matter, 303,611. The number of tons carried one mile was 28,606,301. Average income per ton of all classes, without regard to distance, $2.12; do., per ton per mile, 2.25 cents.

The Officers and Directors for 1860 are as follows:

LITTLE MIAMI RAILROAD.

President, WM. H. CLEMENT.

Directors, Jacob Strader, John H. Groesbeck, Nathaniel Wright, James Hicks, Jr., Larz Anderson, W. H. Clement, Alphonso Taft, Chas. H. Kilgour, Henry Hanna, John Bacon, Abraham Hivling, One Vacancy.

Auditor, D. G. A. DAVENPORT.

Secretary, CHAS. H. KILGOUR.

Treasurer, S. E. WRIGHT.

Superintendent, JOHN DURAND.

COLUMBUS AND XENIA RAILROAD.

President, JOSEPH R. SWAN.

Vice-President, W. H. CLEMENT.

Directors, Wm. Dennison, Jr., Robert Neil, D. W. Deshler, L. Goodale, Wm. B. Hubbard, Jos. R. Swan, Geo. M. Parsons, W. H. Clement, Larz Anderson, Henry Hanna, Abraham Hivling, Simon Gebhart.

Superintendent, JOHN DURAND.

Secretary and *Treasurer*, CYRUS FAY.

Charleston and Savannah Railroad.

At a recent meeting of the Board of Directors of this road, a resolution was passed combining the two offices of Chief Engineer and Superintendent into one, and conferring the office upon Major EDWARD MANIGAULT, who will hereafter be recognized in said capacity.—*Charleston Mercury.*

Railroad Earnings.

The receipts of the Grand Trunk Railway of Canada, for the week ending May 12th, 1860, were $55,609 47

Corresponding week, 1859 42,486 49

Increase $13,122 98

Total traffic from July 1, 1859 $2,523,556 13

Do. for same period last y. 1,990,052 94

Increase $533,503 19

The earnings of the Sandusky, Mansfield and Newark Railroad Company were:

March, 1860 $12,927 02

April, 1860 13,787 88

Total $26,714 90

The total earnings of the Cleveland, Columbus and Cincinnati Railroad for last month, were as follows:

April, 1860 $79,324 90

April, 1859 80,024 86

Decrease $700 16

The Law of Damages.

The Troy *Budget* says: "In the several railroad cases recently decided by the Supreme Court at the General Term in this district, the principle has been established that in actions for negligently causing the death of parties by collision, the question whether the injured party by his own negligence contributed to produce the result is a question of fact, which must be submitted to the jury under proper instructions from the Court. In one of the cases recently passed upon, the plaintiff recovered a verdict at the Rensselaer Circuit for $4,000. Judge Gould set aside this verdict, and ordered a new trial, on the ground that the plaintiff should have been non-suited, it appearing that the negligence of the deceased contributed to the injury. The General Term, however, after full argument, overruled the decision of Mr. Justice Gould, and directed a judgment upon the verdict, thus establishing the principle above referred to. Two similar cases were tried before Judge Gould, who non-suited the plaintiff, and in each case the General Term *reversed the decision* and granted a new trial. This principle may now be regarded as settled in this district, though it is proper to add that Judge Gould dissents.

Railroads in Germany.

At the end of 1859 the total length of German railways in actual working was 1,767 German miles, (about 4½ ordinary miles,) being about 170½ more than at the close of 1858. There has not been so great an increase since the year 1846. Of these railways, of which 1,109 miles belong to private companies, and 658 to the State, Prussia has 655 miles of private railways, and her shares of the new lines opened in 1859 is 68 miles. Austria, counting only those parts of her dominions included in the Germanic Confederation, has 336 miles, and has contributed 38 miles to last year's increase. There are now only seven States in Germany which have no railways—namely, Mecklenburg-Strelitz, Lippe, Waldeck, the two principalities of Scharwzburg, and the two principalities of Lichtenstein.

Railroads of the State of New York.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

American Railroad Journal.

Saturday, June 2, 1860.

Boston, Concord and Montreal Railroad.

The earnings of this road for the year ending April 30, were $253,626 53
And the expenditures were 134,206 27

Leaving as net income $119,420 26

The increase in gross earnings over the previous year was $25,906 47
The decrease in expenses 7,175 34

Making the increase in net earnings .. $33,081 81

In the above statement of expenditures are included all the running expenses for the year and every outstanding claim, besides $6,000 of the operating expenses of the year previous, so that the increase in net earnings amounts really to $45,000.

The net earnings of the road for the year have been applied, first, to the payment of the interest on the bonds of the corporation, which, through all the depression in the railroad interest and the embarrassments of the corporation, has been promptly met. This interest amounts in the aggregate for the year to $67,648. Second, to the payment of an annual sum ($12,500) into a sinking fund—a wise provision for the ultimate extinction of the bonded debt of the corporation. By the judicious investment of this annual appropriation, to set apart which is made obligatory under a legislative act, the bonded debt is reduced by a sum considerably larger than the actual appropriation, and this will continue to be the case so long as the bonds of the road can be purchased below their par value. These two items—interest on bonds and the sinking fund appropriation—constitute an annual charge upon the net earnings of the corporation of $80,178. The balance of the net earnings would be applicable to a dividend if it were not for floating liabilities, from which the road is gradually working itself free. These liabilities are, first, sundry outstanding corporation notes, given when the floating debt of the corporation was arranged. These notes amounted to $45,100, payable in one, two and three years. The first payment has been made during the past year, amounting to $17,000. The second item of outstanding liabilities is the sum due Gilmore and Clapp upon an old claim, which was unexpectedly awarded against the road in the settlement of the accounts of a contractor. This claim is to be paid in easy instalments. The instalment for the past year, with interest, has been paid, amounting to $10,425, and the legal expenses attending the defense of the suit, have also been settled in full, amounting to some $3,000 more. The amount now due on this claim is $47,260 44, making the whole floating debt of the corporation $75,360 44. The road is now actually $50,000 better off than it was last year. When the floating debt is paid, the balance of the net earnings over the interest on the bonds will thereafter be applicable to the payment of a dividend on the preferred stock of the corporation. If the net earnings continue as large as during the past year, the whole floating debt will be extinguished by the business of the next two years.

American Central Railway.

We gave a year or two since a full statement of this proposed line in an account of a convention of its friends held at Fort Wayne. The companies then in charge the different links that composed it were in full activity. The reverses that soon followed and that visited alike all roads, checked the rapid progress of work on this line, though it did not cause an entire suspension of operations. Upon the Illinois portion particularly, there has been no time in which the company did not have a force in the field; and it has now that portion of its line between the Mississippi river and the Chicago, Burlington and Quincy Railroad so far advanced as to warrant the purchase of rails for the purpose of placing them on the road, and for which adequate means have been provided.

To give an idea of the route of the proposed road, of the plans of the parties engaged in it, we copy the following extract from the late report of the President of the Illinois portion of the line:

The *American Central Railway* is the general name given to that line of railroads connecting in the northeastern part of the State of Ohio with other continuous lines, coming through the States of New York and Pennsylvania from the Atlantic seaboard, and from that point of concentration, extending due westward, across the States of Ohio, Indiana, and Illinois, to the Mississippi river at New Boston, opposite the mouth of the Iowa river. The further extension of the line westward, across the State of Iowa, is made by the Philadelphia, Fort Wayne, and Platte River Air Line Railroad. This last named road is, however, destined, probably, to unite at Washington, Oskaloosa, or Fort Des Moines, with the connected line of roads proceeding westward from Chicago, or from the crossing of the Mississippi at Rock Island, and from Burlington—the whole then to be continued in one common track and direction to the Missouri river at Council Bluffs. From Council Bluffs, along the valley of the Platte river, extends the line of the great central route for a railroad to the Pacific ocean, a work, the construction of which, under the auspices of the general government of the United States, may be now regarded as certain, and soon to be provided for. In this connection then, the American Central Railway, itself, becomes an enterprise of continental character and magnitude. The leading idea of the plan is *a continuous, straight due east and west grand trunk road, connecting the net-work of railroads of the Atlantic States with the eastern terminus, on the Missouri river, of the great central highway to the Western Ocean.*

The links in this chain of roads which bear a common corporate name, under the laws of the several States in which they are established, are three:—(1.) The American Central Railway of Illinois—extending from New Boston, on the Mississippi river, across the State, to the western boundary line of Indiana, 186 miles; (2.) The American Central Railway of Indiana, from that State boundary to Fort Wayne, 126 miles; (3.) The American Central Railway of Ohio and Indiana, from Fort Wayne, through Tiffin in Ohio, to Salem, or some point of intersection with the line of the Atlantic and Great Western Railroad, 158 miles. A glance at the map will show that this long line across those States, throughout its entire length, is almost an air line, running nearly with the parallel of 41° north latitude. And in all that distance, keeping upon the plateau, or middle table land, between the waters that discharge northward into the lakes, and the head waters of the streams that run into the rivers of the Gulf of Mexico, this great route traverses one of the finest grain and cattle producing regions of the west, and a country whose vast agricultural resources and rapidly and constantly increasing population, promise an almost limitless demand for the uses of such a direct and convenient avenue for its trade and travel. The whole work is sure to be built.

Its ultimate completion is but a question of time.

* * * * * * * * *

Besides these lateral connections, any view of the condition and character of the American Central Railway in Illinois would be necessarily incomplete, without a reference also to the extensions of the line eastward and westward. These, in their relation to this work, will constitute with it eventually, in effect, but one entire and continuous road. In Iowa, the Philadelphia, Fort Wayne and Platte River Air-Line Railroad takes up the line, as has been stated, at a point opposite New Boston, the western terminus of the American Central Railway, on the Mississippi river. One half of the work of grading and bridging is stated to be done, on that road, for a distance of forty miles from the Mississippi river to Washington, the point where it intersects a branch of the Mississippi and Missouri Railroad. This includes the heaviest earth work next to the Mississippi river, and masonry for a fine bridge over the Iowa river at Wapello. County and other subscriptions have been made, sufficient to do a large proportion, if not al', of the remaining work on the road bed to Washington. In the mean time the company and parties interested wait to resume and complete the work to that point, whenever this road in Illinois shall be in running order from the Mississippi river as far eastward as to the intersection with the Chicago, Burlington and Quincy Railroad. In Indiana the whole road from the State boundary to Fort Wayne is under contract for entire building ready for the rolling stock, and in hands, and upon terms, it is believed, which insure its ultimate completion. The grading is done eastward from the town of Rensselaer to the crossing of the New Albany and Salem Railroad. At Fort Wayne, there are already completed and important connections with the Toledo and Wabash Railroad to Lake Erie, and with the Pittsburg, Fort Wayne and Chicago Railroad, leading directly to the city of Philadelphia. If no further eastern link of the chain were ever to be built, reaching these connections at Fort Wayne, the American Central must be second to no other leading western road in its importance and value. But from Fort Wayne eastward, the work is in still greater forwardness; especially as to that portion of it which extends from Fort Wayne to Tiffin in Ohio.

The route of the Illinois portion of the line traverses the counties of Mercer, Knox, Henry, Stark, Marshall, Livingston, La Salle, Kankakee, and Iroquois, and a portion of the State not excelled in its productiveness, and the rapidity with which it is being filled with inhabitants and developed. The following statements will show the progress of population in these counties since 1840:

	1840.	1850.	1855.	Estimated. 1859.
Mercer	2,352	5,246	9,660	17,388
Henry	1,260	3,870	9,218	18,436
Knox	7,060	13,279	22,847	45,694
Stark	1,573	3,710	6,293	12,125
Marshall	1,849	5,180	9,900	17,820
Livingston	759	1,552	4,606	13,618
La Salle	9,348	17,815	35,563	60,014
Kankakee	...	....	10,110	29,000
Iroquois	1,695	4,191	6,788	12,255
	25,894	54,780	114,985	226,344

The valuation of these counties in 1857 was as follows:

	Real.	Personal.	Total.
Mercer	$2,766,361	$1,415,036	$4,181,397
Henry	4,289,546	983,256	5,269,804
Knox	6,164,804	2,512,471	9,198,056
Stark	1,815,326	673,319	2,488,645
Marshall	2,286,074	807,310	3,094,384
La Salle	5,931,784	2,028,656	8,449,317
Livingston	1,859,668	665,447	2,523,115
Kankakee	2,066,204	665,900	2,731,104
Iroquois	3,230,241	777,245	4,007,406
	$30,407,008	$10,528,742	$41,945,389

The portion of the line to be first constructed is that between the Chicago, Burlington and Quincy Railroad and the Mississippi river, a distance of 50 miles. This is now very nearly prepared for the rails. When completed, it will, for the present, be run by the Chicago, Burlington and Quincy Company. For the purchase of iron, and other necessary expenditures, the company have prepared bonds to the amount of $2,700,000, being at the rate of less than $15,000 to the mile; but these are to be issued only as the different sections are brought into use. For their payment, a sinking fund is provided, equal to 5 per cent. of the amount of bonds, for their purchase and cancellation.

A new impulse has been given to this project, by the progress of the Atlantic and Great Western, the construction of which, from the Erie Railroad to Akron, Ohio, seems to be no longer problematical. The line of the American Central will commence near Akron, and it may be induced by the rapid progress of the Atlantic and Great Western to adopt its gauge and that of the Erie.

Estimated Cost of the American Central Railway, from New Boston to Indiana State Line. complete, include Buildings, Equipments.

Total	$497,386 84

The President of the company is the Hon. R. C. SCHENCK, of Dayton, Ohio, a gentleman of well-known ability and influence in the West. The Trustee, under the mortgage, is Isaac Seymour Cashier of the Bank of North America, in this city.

Angular Nib Gold Pen.

We invite attention to the Advertisement in another column, of Messrs. BARD, BROTHERS & Co., manufactures of Gold Pens and Pen and Pencil Cases. They are also Manufactures of Bard & Wilson's *Patent Angular Nib Gold Pens.* This is an entirely new pattern of pen. The nature of the invention consists in the combination of the point commonly called the French Point, (which is made by compressing the sides thereof into planes inclined angularly,) and the ordinary cylindrical barrel, whereby the pen in being used has all the advantage of the lateral action of the one, and can be inserted in the ordinary pen holders as in the other. The improvement consists in the *Angular shape of the nib*, to which shape it is brought by compression, instead of by the usual method of filing. There is therefore no waste of material, nor is its strength impaired in the slightest by the process to which it is subjected in attaining the elasticity required. It is made of 16 carat gold. After using one of these pens, we have no hesitation in pronouncing it a decided improvement over any pen that has heretofore been brought to our notice. Address Messrs. BARD, BROTHERS & Co., No. 21 Maiden Lane, N. Y.

Dinsmore's Railroad Guide.

We have on our table Dinsmore's little Railroad and Steam Navigation Guide for June looking bright and much improved by the late fire.

This little pocket companion is indispensable to travelers, and as in these days every body comes under that category, its re-appearance is a matter of congratulation. Its reliability is undoubted. Time, distance, fare and connections are given with the most scrupulous care and he who goes astray with one of these books in his hand has no one but himself to blame.

The perseverance of Dinsmore deserves all sorts of success and every body who uses a railway or a steamboat should buy his guide monthly.

Railroad from Springfield to Quincy, Ill.

The building of another railroad from Springfield to Quincy, by way of Virginia, Beardstown, Rushville and Mt. Sterling, has been under consideration in this city for several days. Gentlemen from New York have been on here for the purpose; among them Messrs. Boody and Jessup, and we are informed that the preliminary steps will be taken at once, and if the scheme meets with proper encouragement along the line, the road will be completed during the coming twelve months, connecting with the Quincy and Toledo road at Mt. Sterling. Gen. Singleton, of Quincy, the President of latter road, was also present at the Conference. —*Springfield (Ill.) Register.*

Essex Railroad.

The annual meeting of this company was held on the 29th ult. The following is an abstract of the report presented:

RECEIPTS.

Capital stock		$1,084,200 00
Bills payable		67,170 00
Balance of Profit and Loss account	$27,660 63	
Balance of Water Power account	43,581 31	
		71,241 94
		$1,222,611 94

EXPENDITURES.

Reservoir on Prospect Hill		$2,604 74
Real estate		639,939 88
Stock in the Essex Co., 796 shares		79,600 00
Materials on hand		1,607 76
Bills receivable	$19,869 80	
Land notes receivable, with mortgage	99,184 60	
Cash	4,432 40	
Sundry accounts receivable.	2,456 09	
Mill leases	372,916 67	
		498,859 56
		$1,222,611 94

The company is nearly free from debt, $75,330 having been paid off since the last annual statement. The contingent liabilities have also been largely reduced. The profit and loss account has been increased, and the water power account shows a large balance on the profit side. The building and land accounts have both been diminished by sale.

The company have received during the year 297 shares of its stock, 162 of which were taken in part payment for land. The Treasurer hoped before the annual meeting to receive 46 shares more, when they would be able to complete the reduction of the capital stock to one million.

The account of mill leases is increased by $40,000, resulting from the sale of eight mill powers to the Everett Mills.

The profit and loss account is increased by $8,334.50. The current receipts from rents, from tolls, and from interest received more than paid, have amounted to $24,658.42, and the current expenses, including 6,797.65 for taxes, to $16,463.98, leaving a profit from income of $8,194.44; and some other small matters have slightly improved the account. A large gain has resulted from sales of water power during the year. These have been sufficient in amount to extinguish the balance of the whole cost of our water power, and to exceed it by $43,581.31, which excess is, therefore, a profit on sales beyond cost.

When the crisis came in 1857, the liabilities of the company were $747,620.24. The debt now is nearly extinguished.

The company has now, after cancelling 842 shares of its stock, a capital of $1,009,000. It has a property represented in the preceding statement of accounts, which, even if its valuation should be reduced by the whole amount of the profit and loss, is estimated as worth $1,000,000; together with some 900 acres of land on the south side of Merrimac river, not included above, and about 60 unsold mill powers, on which the mill rent alone, at $300 per power, the smallest amount ever reserved for rent, would represent a capital of $300,000. The whole property, at a moderate valuation, if land and water power have anything like the value they have had before, could hardly be estimated at less than a million and a half of dollars.

Immediately upon the adjournment of the regular meeting, a special meeting convened, and the following vote was passed:

Voted, That the capital stock of the Essex Company be reduced by cancelling 842 shares thereof which are the property of the company and now stand in the name of the Treasurer in trust, the whole number of shares of the capital stock being thereby reduced from 10,842 to 10,000, of the par value of one hundred dollars each, and the amount of the capital stock from $1,084,200 to $1,000,000.

Griffin, McDonough, and Covington Railroad.

The length of this road as reported by L. P. Grant, Esq., C. E., is 39 miles, the maximum grade 52 8-10 feet per mile, undulations short, Total cost $698,380, or an average of about $17,009 per mile, exclusive of machinery and rolling stock.

The productiveness of the road he considers certain, but no estimates are given. He remarks:

As a link in a through line from the west towards the seaboard your route will hold about equal advantages with two others, taken Newnan as a common starting point. The distance via Griffin and Covington to Augusta will be about 204 miles. That via Atlanta to Augusta is 210 miles. The third via Griffin, Macon and the proposed road from Macon to Augusta, will be about 214 miles. When the grades are considered, these three routes may be said to possess equal advantages.

Quakake Railroad.

This road we understand, goes into use on Monday next, as a link in a direct through line, for regular passenger trains, by way of the Lehigh Valley and New Jersey Central Railroad to New York. By this outlet passengers from Williamsport, and connecting points, may pass directly to New York and the East without riding 50 or 60 miles in an opposite direction to Elmira, thence to pass over N. York to reach the desired destination. The traveling public now have the option of passing over the Quakake to New York, or of coming by way of the Catawissa, Little Schuylkill, and Reading Railroads to Philadelphia, as at present. The decree for the sale of the Catawissa Railroad, we understand, is out, authorizing the sale of the work on the 2d of July, and within two months thereafter it is supposed the company will be reorganized, the same as has been the Elmira Railroad, and it is hoped and believed, with similar good effect on the prices of its securities.—*Philadelphia Ledger*, 26th ult.

Manchester and Lawrence Railroad.

The following gentlemen have been elected directors of this company for the year ensuing; N. G. Upham, E. J. M. Hale, George H. Dodge, Asa Fowler, John Flint, E. A. Straw, N. G. White.

Kansas, Galveston and Lake Superior R. R.

It is anticipated that that portion of this road between Kansas City and Cameron will soon be in process of construction. An arrangement has recently been made with the Hannibal and St. Joseph Railroad Company, by which the Kansas, Galveston and Lake Superior Company is to raise $450,000, of which $200.000 is apportioned to Kansas City, $200,000 to Clay County, and $50,000 to Clinton. This will grade, bridge and tie the road, and it is proposed then to issue the bonds of the road to procure the iron and rolling stock. The Hannibal and St. Joseph Company then propose to take charge of the road, keep it in repair and run it at their own expense, and under such regulations as to time and charges as their own is now, and take sixty per cent. of the gross earnings for their pay; the other forty per cent. to go as a sinking fund to meet the interests and bonds issued for the iron and rolling stock. Steps will be taken to place the road immediately under contract, and the work will be commenced by the 1st or 4th of July.—*Cin. Inq.*

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

OFFICE OF THE PHILADELPHIA AND READING RAILROAD COMPANY, March, 1860.

The holders of the Bonds of this Company, due July 1, 1860, can now receive, upon application at this office, 10 per cent. in cash, upon the terms specified in the Circular attached.

The holders are also entitled to the benefit of a Sinking Fund of $140,000 per annum, as established by the Stockholders at their annual meeting held January 9, 1860, and in pursuance of the contract entered into by the Company and duly recorded, to carry the same into effect.

S. BRADFORD, Treasurer.

NOTICE TO THE HOLDERS OF PHILADELPHIA AND READING RAILROAD COMPANY MORTGAGE BONDS, DUE JULY 1, 1860.—These Bonds are secured by the First Mortgages on the Road, amounting in the aggregate to $3,308,400. The net revenue for the last fiscal year was six times the amount of the annual interest on these Bonds.

The Managers propose to extend them for the period of twenty years, the holders retaining the bonds and the security of the mortgages in the precise condition in which they are now held. Fresh sheets of coupons for the interest, payable half-yearly, will be issued.

A bonus of 10 per cent. will be given to the holders, in consideration of their assenting to the extension. This bonus will be paid in cash to the bearers of the bonds, on their signing a receipt and presenting their respective bonds at the office of the Company, or to its agents, for endorsement.

Terms of receipt and endorsement will be furnished on application.

By order of the Board of Managers.

2m15 W. H. McILHENNY Secretary.

CEMENT ROOFING.

PATENT MICA
AND
Fibrous Cement Roofing.
IT HAS STOOD THE BEST OF ALL TESTS—TIME!

IT fully sustains the high reputation it has gained, as a PERFECTLY RELIABLE, DURABLE and WATER PROOF ROOFING. It is adapted to every variety of Roof, new or old, and is the best and cheapest Cement in use for repairing OLD LEAKY TIN or other Roofs.
ALL WORK WARRANTED.
Cement for sale by the Barrel, and sent to any part of the Country, with printed instructions for use.
Also, for sale, State and County Rights for a portion of the United States.

MANUFACTURERS OF
MASON'S SPERM OIL,
AND DEALERS IN
SPERM, WHALE, LARD AND OTHER OILS,
For Railroads, Steamers, Machinery and Burning.

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and
WILL NOT GUM.
In no case has it failed to meet the approval of the consumer.
The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor
F. S. PEASE, 61 Main st., BUFFALO.
Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.

TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851.
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855.
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

W. H. McVICKAR, President.

CEMENTS.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime**, and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT**, branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels**, and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE**, Secretary, 90 Wall st., N. Y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER,** 104 Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

Coal-Burning on the Pennsylvania R. R.

(Continued from p. 463.)

The experiments made with a coal-burning engine, using Pittsburg Coal, fitted up with a fire-brick deflector and air-distributer, and moving an ordinary passenger train, showed a saving equal to 54½ per cent. over engines using hard wood. The cost of coal per ton delivered on the Western Division of the road, between Pittsburg and Altoona, was $0.90; on the Middle Division, between Altoona and Harrisburg, $1.82, and on the Eastern Division, between Harrisburg and Philadelphia, $2.62. The cost of coal for the round trip on the several Divisions of 229, 264 and 212 miles, respectively, were $3.19, $6.28, and $8.64, and the cost per mile 1.39, 2.37, and 4.07 cents. The cost of hard wood, as compared with coal, was as follows: Cost per cord, delivered on tender, on Western Division, $2.39; on Middle Division, $2.72; on the Eastern Division, $3.90. The cost of the same for the round trip on the several Divisions, was $11.31, $12.51, and $15.97; and the cost per mile run, 4.94, 4.74, and 7.54 cents.

From this table it appears that while the average cost for passenger service over the whole road with *Pittsburg Coal* is 2.57 cents per mile, that of *Hard Wood* is 5.64 cents per mile, showing an average saving of 54½ per cent. by the substitution of coal for wood in passenger engines. By using "Broad Top" Coal on the division between Harrisburg and Philadelphia, and "Pittsburg" on the remainder of the road, the saving would be increased to 56 per cent.

Third. INCREASED COST OF LOCOMOTIVE REPAIRS.—As a partial off set to this economy, there is to be taken into account an increased cost of repairs of engine due to the use of coal, which affects the fire-box, flues and grate more injuriously than wood.

I estimate this difference from data afforded by the experience on the Pennsylvania Railroad, (in the use of coal in freight engines, and of wood in passenger engines,) to be equivalent to about ½ cent per mile run, as follows:

	Per annum.
Estimated life of a set of flues of an average cost of $555, in a passenger engine using Pittsburg coal .....14 years.	
Estimated life of a set of flues of an average cost of $555, in a passenger engine using wood.....25 years.	
Increased cost due to use of coal.....	$17
Estimated life of copper fire-box of an average cost (deducting value of old material) of $680, in a passenger engine using Pittsburg coal.....6 years.	
Estimated life of an iron fire-box, costing $480, in a pass'ger engine using wood. 12 yrs.	
Increased cost due to use of coal.....	73
Estimated life of a set of grate-bars, costing $14 in a passenger engine using Pittsburg coal.....6 months.	
Estimated life of a set of grate-bars, costing $14, in a pass'ger engine using wood. 12 mos.	
Increased cost due to use of coal.....	14
Total increased cost due to use of coal in passenger engines, in lieu of wood.....	$104

Which is equivalent on the average annual mileage of passenger engines for the year 1858, viz: 20,361 miles, to about ½ cent per mile.* This would reduce the economy to be derived from the substitution of coal for wood, from 54½ to about 45 per cent. I do not doubt that the last mentioned rate is entirely within bounds. On the present annual expenditure for wood used in passenger engines, the yearly saving would amount to about $40,000.

The proportion of economy here shown, will in all probability be increased from year to year by the rapidly enhancing cost of wood; coal tending to diminish rather than increase in price. Many advantages will also be found to result from the change of fuel, upon which it is difficult to place a proper estimate in dollars and cents. Among these is the saving of the expense of maintaining wood-sheds at distances of from 20 to 30 miles along the road; the avoidance of long stoppages of trains at the same intervals for the purpose of taking on fuel, of the risk of fire from sparks to property along the road, its bridges, &c., and also to the wood itself lying in piles at the stations; and the avoidance of detention of trains owing to a bad or wet lot of wood; (coal being of a more uniform quality.) *With coal no passenger train need stop to replenish fuel on any division of the road.*

The increased cost of transportation due to hauling the coal in the tender, a greater distance than wood, is fully met—

1st. By the greater *weight* which has to be hauled a less distance, where wood is used, since about 2½ lbs. of wood are required to do the work of 1 lb. of coal.

2dly. By the fact, that in ascertaining the cost of *wood* delivered on the tender at the different stations, (as stated in the above tables,) only the ordinary train expenses were included, for the large portion which requires to be hauled; and the cost of repairs to engines and cars, and of maintainance of track due to such transportation of wood, were not counted. In computing the price of *coal*, all the items that enter into the cost of transportation were included.

The obstacle to the acquisition of this great economy, heretofore has been the dense *smoke* produced by the combustion of the coals accessible to the line of this road. For nearly all *freight* trains the "Pittsburg," "Broad Top" and "Alleghany" coals have displaced wood for several years; but although it was known that coal would prove much the cheaper and more efficient fuel for passenger trains, the belief that the smoke nuisance could be obviated (even if at all) only by expensive and structural alterations of the existing plans of locomotives, delayed the inauguration of any reform.

We have found, however, in trials of six coal-burning engines, that four of the plans showed sufficient freedom from smoke to admit of their use with passenger trains when burning *Broad Top Coal*, and that one (which by slight modifica-

* The correctness of this estimate seems to be borne out by the statement of Supt. Nicolls, as to the results of actual working with coal and wood on the Reading Railroad; according to which, freight engines, using 105 pounds of *Anthracite* per mile, are subject to an extra cost of repairs, over those of a wood-burning engine, of 1½ cents per mile. The average consumption, per mile, of the passenger engines on the Pennsylvania Railroad, will not exceed one-fourth the quantity here mentioned, while the *bituminous* coal, especially the "Pittsburg," is much less destructive than Anthracite, in its effects on metal surfaces.

tions in the case of another plan might be increased to two) was successful in avoiding smoke, even from the highly bituminous *Pittsburg Coal*. The order in which these plans rank as regards exemption from this nuisance, has also been stated. We have further seen that Passenger Engine No. 156, provided with a fire-brick deflector and air-distributor, ran a round trip over every division of the road, using Pittsburg Coal, and emitting no smoke or cinders that were observed by passengers in the regular trains, which were drawn.

It now remains to inquire:—

WHICH PLAN OF SMOKE PREVENTION IS ON ALL ACCOUNTS THE BEST ADAPTED FOR USE ON THIS ROAD?

First.—The "Phleger" and "Dimpfel" plans could not be applied to the company's present stock of passenger engines, without structural alterations, involving, with the loss of time incurred, a greater expenses than would be compensated by the change of fuel from wood to coal.

For new engines, they both have merits which entitle them to consideration. Either of them is capable of burning "Broad Top" (or any other semi-bituminous coal) without the production of smoke to the extent of annoying passengers. And the "Phleger plan," by some addition to the supply of air, may be adapted to the use of Pittsburg Coal. The difference in amount of fuel to do the same work between two locomotives of the same size, and equal in every respect, except in those parts concerned in *combustion*, which form the distinctive features of these two plans, would in all probability be too slight at the low cost of coal on this road, to warrant any preference for one over the other. Such preference should depend on other circumstances, such as the liability to get out of order, the first cost, amount of patent fees, &c.,&c.

It may be said, however, that as far as the prevention of smoke is concerned, neither plan will warrant any material increase of cost over the present prevailing forms—since equal, and even superior results can be derived from the latter by a few inexpensive alterations.

Second.—The plan represented by the "Blue Ridge" is adapted to the company's present equipment of passenger locomotives; and will enable them, at a cost of alterations, of about $250, (the most of which is for shortening the flues, and providing a *combustion chamber*.) to use Broad Top Coal, (but not Pittsburg,) without an inconvenient production of smoke. For an entirely new engine, its additional cost would be beneath consideration; but while, in this respect, it does not excel the fourth plan to be mentioned, the combustion would always be much less perfect with it than with either the 3d or 4th.

Third.—The "Gill" plan can be adapted to existing locomotives, and will enable them to use either Pittsburg or Broad Top Coal with the production of less smoke and cinders than now issue from wood-burning engines.

The cost of altering an ordinary "wood burner" to this plan, is about $500. To this would have to be added $160 for removing the boiler-flues and forming a combustion chamber, if the alterations were made immediately; but such additional cost can be avoided by making the change gradually, as the engines come in the shop for new fire-boxes. It should be stated that the patentees, Messrs. Gill & Grier, both in the employ of the Pennsylvania Railroad, have offered the free use of their said invention to this road, during the continuance of the patent.

For simplicity, cheapness, and efficiency, this is far superior to any of its competitors on the regular trials, and indeed is the only one that permitted the rich Pittsburg Coal to be used without an inconvenient production of smoke.

Fourth.—The modification of the "Gill" plan, by which *fire-brick* is used in place of copper water sheets, for the diaphragm or deflector, through which to distribute air in numerous small jets over the fire, was first suggested by the undersigned, and applied by him, with entirely successful results, to Passenger Engine No. 156, as has been described. This modification has, I think, several important advantages over the original plan, viz:

More Perfect Combustion.—When fresh coal is thrown on the fire, a sudden disengagement of gas, in large quantities, takes place, while the temperature necessary for its consumption is *reduced* both by the sudden conversion of solid into volatile matter, and by the contact of the raw fuel with the surface of the fire. Under these circumstances, in ordinary engines, smoke is produced in the greatest quantities; and even in those duly provided with an allowance of air, more or less smoke is given off at these moments. No increase of air-admission will entirely remedy this difficulty, because it does not arise solely from want of air, but also from *inadequate temperature*. If we turn on the gas from an ordinary room-burner, no heat that can be applied will produce flame unless we also apply air; but it is equally true that no amount of air can inflame the gas without the heat. The effect of deficient temperature can be seen in good coal-burning engines, where the opening of the fire-door, by chilling the gases in the furnace, produces smoke, there being none while the door was shut.

In stationary boilers, the difficulty can be remedied by a peculiar mode of firing which permits a portion of the fuel at all times to remain in a state of incandescence to supply the temperature necessary for the combustion of the gases arising from a fresh charge of fuel. In locomotive furnaces, the advantages of this plan are but slightly available; but it is obvious that if we can store up heat above the fire, which will intercept the gases on their route to the flues, we have attained the same purpose. The *fire brick* deflector and bridges act as such reservoirs of heat. This material, one of the best absorbents and radiators, gives out to the cold streams of gas and air which arise when fresh coal is applied, that surplus heat which it had absorbed when the surface of the fire was in candescent.

In the case of a water-space deflector, the copper plates enclosing it, being excellent conductors, can never become much hotter than the water inside—say three or four hundred degrees; whereas the temperature of *flame* is nearly as many thousand degrees. Hence the water-space deflector exercises a cooling influence upon the gases. It is true that, on trial, Engine No. 156 was not found quite as cleanly as No. 206; but this is satisfactorily accounted for by the fact, that in the former the fire-brick diaphragm was perforated with but 250 holes, while those in the water-space deflector were about 600 in number. It was found in the case of the former, that the longer the engine was run, permitting the fire-brick to become well heated, the more perfect was the combustion.

Less First Cost.—The cost of applying the water-space deflector to an ordinary wood-burning engine, has been shown to be about $500. That of inserting a *perforated fire brick deflector*, properly supported by water tubes; together with the expense of all the necessary improvements and modifications of fire-door, ash pan dampers, smoke stack, exhaust pipe, and blower or steam jet—the last made to work by same handle as steam valve, so as to be at every moment within the control of the engineer—would be less than $100. This is a material advantage.

Less Cost of Maintenance.—A set of *fire brick*, supported by transverse water-tubes—the whole cost of renewing which, at any time, including labor, would not exceed $30—will certainly last one year, if not much longer. The *water space deflector* and bridges would probably require the use of the caulking tool nearly to that extent in a year, while at the end of five, or in less time, they would only be worth the value of the worn out material.

Another important advantage possessed by the fire-brick, in my opinion is, that as it can be adapted to an existing wood-engine, at an insignificant cost, it allows opportunity for any simpler or better plan that may hereafter be discovered, to be applied at any moment, without loss.

The final reason in favor of the fire-brick is, that it admits, with advantage, of the *immediate* alteration of all passenger engines from wood to coal-burners. As the water-space deflector involves the necessity of a combustion chamber, it would be desirable, if that plan were adopted, to effect the change only as the engines come in the shop for thorough repairs. But trials since made with the perforated fire brick, inserted in a wood engine, No. 135, *without combustion chamber*, have shown that, although the combustion would be improved by such a chamber, yet it is not essential to enable an engine thus fitted up to use either Broad Top or Pittsburg Coal, without the emission of any smoke or cinders that would incommode passengers. It was also shown that the absence of a combustion chamber in this engine had no apparent effect on the expenditure of fuel. No time need, therefore, be lost in deriving the advantages to result from the substitution of coal for wood; and when new fire boxes are required, combustion chambers can be added, with no additional cost, or at least none that will not be fully balanced by the preservation of the flue-sheets resulting from this independent source of economy.

As an offset against these advantages, some credit should be given for the *heating surface* obtained with the water space deflector, although, when it is considered that this water-space (but 4 inches wide) is clogged, and the circulation of the water impeded by some 600 air pipes, which contain, moreover, currents of cold air rapidly circulated, the benefit from this source would not probably be found very great.

Fire-brick has, it is true, been heretofore adopted in locomotives for bridges, arches, &c., and it has been used in the shape of arches in the coke ovens of Wales, for the same purpose. viz: of lengthening the "run" of the gases, affording greater time for their mixture with air, and of maintaining a high temperature above the surface of the fuel, since the year 1840. But it had not to my knowledge, been used with perforations for the purpose of jetting a large quantity of air evenly over the fire, before the trial with Engine 156, herein recorded. There being no patents to effect this plan, unless it be that of Gill & Co., for the air chamber, the free use of which has already been given to the Pennsylvania Railroad Company, a not unusual bug-bear to the adoption of any mechanical improvement, does not, in this case, exist. *The entire extra weight added to the engine will not exceed* 600 *pounds.*

I would, therefore, recommend the application of this plan to all passenger engines.

DIRECTIONS.

The deflector should start from the front leg of the fire-box, a little below the bottom row of flues (thus leaving the grate of full area, and diminishing but slightly the heating surface of the front sheet,) and extend backwards to within 18 inches of the door. The tile forming it to be 3 inches thick, composed of 6 pieces slightly arched transversely, and resting on 3 hollow plugs, inserted in each side of the fire-box, and the same number in the front leg; to be supported also by 3 water tubes of, say, 2 inches in diameter, extending from side to side of fire-box, and inclined sufficiently to maintain a good circulation of water through them. The perforations, made in the clay before burning, to be from 400 to 500 in number, or as many more as can be inserted without unduly weakening the tile; diameter of the holes, ½ inch at the back end, the ¾ths near the front—where the air enters above the deflector, through large apertures in the leg of the fire-box, protected by a valve. This valve should should be easily adjustible from the fireman's post on the engine—but should be arranged *not to close entirely* at any moment. The air-chamber is formed by leaving a space above the whole surface of the perforated tile, and roofing it in by a parallel tile, similarly supported. The air space should be 3 inches high at the front end, next the water sheet, and gradually diminish to 1½ inches at the back end, or that nearest the fire-door; so that the greater tendency of the air to issue through the farther holes, may be counteracted, and the supply made uniform through all the apertures. This will also counteract the tend-

ency of the nearer hole to close up by the adhesion of soot or cinders.

Over the deflector, and suspended from the crown sheet, a wall or bridge, likewise of fire-brick, should be placed to aid in mixing up the gases, and inflaming them. Where there is a combustion chamber, another fire-brick bridge might *stand* in it with advantage, taking care not to impair the draught by unduly cramping the spaces for the gases. The inner plate of the fire-door should be connected at the rim with the outer, and perforated with 100 holes, or as many more as practicable, of ⅛ inch diameter—the outer plate containing larger perforations, protected by a sliding cover or valve. A few hollow stay-bolts, with ½ inch cavities, say 20 or 25 in all, placed in the back sheet and sides of the fire-box, near the corners, and from 12 to 15 inches above the grate, will also be desirable—at least for Pittsburg coal. The ash pan dampers should be made as nearly air-tight as possible, and the blower, or steam-jet capable of being worked by the throttle-lever, so that it may conveniently be opened the instant steam is shut off from the cylinders. It should also be workable independently. It may be found desirable to insert a *dead plate*, about twelve-inches long, at the back end of the grate, (that next the fire-door,) for the purpose of increasing the run of the gases.

These, with some slight alterations of the smoke-stack, will be found to be all the improvements necessary to enable an ordinary wood-burning engine to use the richest bituminous coal without annoyance to passengers from smoke or cinders.

Economy of Fuel.

A large reduction in the fuel bills of the road, it has been proven, will follow the adaptation of passenger engines to the use of coal. In the case of freight engines, already burning coal almost exclusively, the mere prevention of the smoke nuisance can hardly be considered as an object of pecuniary concern; and at the low price of fuel on this road, the loss from imperfect combustion would be too slight to warrant the application of any plan for more effectually consuming the gases, whose first cost and cost of maintenance is not extremely low.

The utmost extent of saving derived by the *complete prevention of smoke*, in the experiments of the New Castle Committee of England, with stationary boilers, was 12.3 per cent. that being the difference in the evaporative power of 1 pound of coal between trials made by the committee themselves, during which no air was admitted except through the grate, and much and often a very dense smoke was evolved; and trials with the same boiler and furnace after the application of C. W. e Williams' system, when no smoke whatever was produced; the grate in both cases being 18 square feet, about the size of an average locomotive grate.

This result corresponds closely with that obtained by me with passenger engine No. 156, which was tried on the Allegheny Mountain grade both before and after the application of the perforated fire-brick deflector, and was found to consume 13¾ per cent. less coal when making barely any smoke, than when smoking freely; the train, speed, weather, engineer, and fireman, etc., being uniform for both trials.

If 12 or 13 per cent. be the extent of the economy to be derived from the prevention of smoke in freight engines, the average amount of saving on this road would not warrant the adoption of any plan to secure that object, the first cost and repairs of which, distributed over a term of years, would exceed $150 per annum.*

On the western division, where coal is cheapest, no plan costing over $90 per annum would be warranted; on the division between Altoona and Harrisburg, no plan costing over $130 per annum; and from Harrisburg to Philadelphia, no plan costing over about $200 per annum. It is evident that this limitation would exclude the use of the water-space deflector on the western division, and probably on the middle. It would, however, permit the use of the fire-brick deflector over the whole road, and I would therefore recommend the alteration of all coal burning freight engines according to this plan, combustion chambers to be provided as the engines come in the shop for renewals of fire boxes. This measure will produce a net saving in the expenditures on account of fuel, of about $10,000 yearly; besides ridding the country along 360 miles of railroad, with the streets of the towns and villages traversed, of the greater part of the nuisance to which they are now subjected in consequence of *smoke*.

An equal, if not greater saving of fuel than any which can be effected by mechanical appliances (at least to freight engines) would, I believe, result from more careful *firing* and *engineering*. It was seen in the comparative trials between Altoona and Mifflin, that the lowest consumption was obtained from an engine (No. 139,) with none of the modern improvements for perfecting combustion. But the engineer and fireman were both daily accustomed to the road (as well as to the engine) and no fuel was wasted from ignorance of grades, etc. While this does not, it is true, account for the whole of the economy there shown, it explains a large proportion of it.

A careless or ignorant fireman, particularly when using the highly inflammable Pittsburg coal, may burn 20 per cent. more fuel in doing the same service than a careful and experienced one, and this wastage would be augmented by bad engineering.

What seems to be wanted is some plan of *rewards* or *premiums* which would give the men a more direct and immediate interest in saving fuel, and which would pay the economical fireman or engineer a larger compensation than the wasteful one. A standard should be fixed, below which the value of all coal saved should be divided between the company and the men, half to each. A similar plan has been long in use on nearly all the French railroads, and on many in England, and will account, to a considerable extent, for the low consumption of fuel per mile in those countries. It has also been adopted in this country on the Philadelphia, Wilmington and Baltimore Railroad, (in respect to wood,) with very beneficial results.

If this system is adopted on the Pennsylvania Railroad, some care will be necessary to fix a proper standard of consumption for each Division of the road, and for the several classes of engines. The coal will also require to be weighed. The value of the present monthly tables used on the road, purporting to show the consumption of fuel bo each engine, is very much impaired by the fact of the coal being measured out in bushels to the engines instead of being weighed. The spirit of competition among the men is repressed, since a sufficient answer to any statement of these tables, favorable or unfavorable, is that the amount of fuel was merely estimated. The correctness of this assumption may be judged from the fact, that a barrow of coal, which I weighed on the platform at Altoona—ready to be delivered to an engine as 80 bushels—was found to contain but 67. Yet the engine would have been charged with 6,400 pounds of coal, when the actual consumption was but 5,360 pounds—a difference of 16 per cent. The expense of scales at the various stations would be insignificant, compared with the advantages to be derived from correctly ascertaining the consumption of fuel. Some plan of weighing the coal in the tender would probably be even preferable—as it would afford the most satisfactory evidence of the actual weight to all the parties interested, besides being more expeditious.

The adaptation of passenger engines to the use of bituminous coal in lieu of wood, after the manner described; the application of the same plan to freight engines (already burning coal) for the purpose of economizing the gases; and the adoption of a proper system of premiums to the firemen and engineers, for economy in the use of fuel, are immediately practicable measures, which will effect a large and yearly increasing reduction in the expenditures for fuel on this road.

* Thus—average annual mileage of freight engine 14,000 miles; average consumption of coal per mile, say 80 pounds; annual consumption, therefore, 560 tons; of which 12½ per cent. saved in smoke would be 70 tons; equivalent, at the average cost of coal (with transportation, etc.,) on this road, (2.20 per net ton,) to about $150.

The Public Lands.

The sales of public lands in the United States, in twenty-seven years, have realized over one hundred and thirty-six millions of dollars, viz:

Number of Acres sold, and Amount realized, 1833 to 1859.

Years.	Acres.	Amount.
1833	3,856,227	$4,972,284
1834	4,658,218	6,099,981
1835	12,564,478	15,999,804
1836	20,074,870	25,167,883
1837	5,601,103	7,007,523
1838	3,414,907	4,305,564
1839	4,976,382	6,464,586

1858†	3,804,908	2,116,768
1859†	3,961,580	1,756,667
Total, 27	122,038,290	$136,529,782

The following summary exhibits the whole quantities of unoffered surveyed land ready for market September 30th, 1859:

States and Territories.	Acres.	States and Territories.	Acres.
Missouri	222,833	California	14,943,671
Alabama	90,530	Minnesota	12,624,682
Louisiana	875,266	Oregon	4,135,996
Michigan	609,938	Washington	1,655,752
Arkansas	733,278	Kansas	5,019,488
Florida	3,968,798	Nebraska	3,818,573
Iowa	2,239,682	Utah	1,987,580
Wisconsin	2,326,342	New Mexico	1,718,532
Total acres			56,970,941

Statement exhibiting the quantity of land selected for the several States under the Acts of Congress, approved March 2d, 1849, and September 28th, 1850, up to and ending September 30th, 1859:

States.	Total since dates of grants. Acres.	States.	Total since dates of grants. Acres.
Ohio	54,438	Louisiana, act of 1849	10,713,479
Indiana	1,334,732	Do. 1850	512,814
Illinois	3,259 098	Michigan	7,273 724
Missouri	4,313,500	Arkansas	8,652,112
Alabama	2,595	Florida	11,790,687
Mississippi	2,947,387	Wisconsin	3,449,238
Iowa	2,243,296		
			56,634,105

Out of 8,652,112 acres awarded to Arkansas, 82,559 having been shown to be dry and fit for cultivation, the claim of the State has been rejected, and the lands approved under the grant of February 9, 1853.

* From Jan. 1 to June 30.
† For year ending June 30.

Statement, showing the amount received and paid into the Treasury for public lands, during the fiscal year ending June 30, 1859:

States.	1st half.	2d half.	Total for fiscal year.
Ohio	$100	$310	$410
Indiana	....	551	551
Illinois	500	7,460	7,960

—Courier and Enquirer.

Railways in India.

We copy from *Herapath's Railway Journal* the following summary of a very interesting paper on Indian railways, with a description of the Great Indian Peninsula Railway, by Jas. J. Berkley, C. E., which was read at the Institution of Civil Engineers, London, on the 8th of May:

The reason why the commerce of India has continued so incommensurate with the resources of the country, might be chiefly assigned to the want of proper communications. Indian railways would not, as in England, be the substitution of a perfect system of conveyance for other convenient means; but in many districts they would be the first introduction of any communication whatever, adapted for the requirements of the country. It was not, however, on these grounds that they merited attention; but rather in the remoteness of the country, the peculiarity of its soil, climate, and laboring classes, and in the novelty of its physical characters, and of the materials it produced.

Since the year 1849, when the Government took the first decided step towards the establishment of a system of railways in India, the formation of 4,821 miles had been sanctioned; 636 miles had been opened for traffic; 765 miles were expected to be opened in the current year, and 864 miles in 1861. The estimated capital was nearly fifty-two millions and a half; of which sum the expenditure of upwards of thirty-four millions had been sanctioned, and more than twenty-seven millions had been subscribed.

The arrangements under which Indian railways were being carried out, consisted of a Government guarantee as the means of raising the requisite capital; the agency of incorporated companies to design, execute, and manage them; and Government supervision to define the projects and control the proceedings and expenditure. The terms of the contract between the Government and the companies were then briefly stated; and it was remarked that, as far as they had been brought into operation, they might be pronounced to have been successful, although attended with some disadvantages, which were pointed out, the principal one being delay, owing to the necessity for reference to many widely scattered tribunals.

Certain standard dimensions had been adopted for all the lines and the rolling stock, including a uniform gauge of 5 feet 6 inches, and a minimum clear width between the tracks of 6 feet.

The principal lines of the Great Indian Peninsula Railway, which it was the more immediate object of the paper to describe, were proposed to extend from the port and City of Bombay to join the East Indian line at Jubbulpore on the north-east, with a long branch to Nagpore, and to meet the Madras line at or about the river Kristna on the south-east.

The advantages of the situation of Bombay, in the centre of the western coast of the Peninsula of India, of its safe and capacious harbor, as well as its recent preponderance of trade, distinguished it as the commercial capital. The produce of the Customs had more than doubled in five years; and its commerce in merchandise and treasure, in 1858-9, exceeded thirty-four millions sterling, being nine millions more than the whole foreign commerce of India in 1848. Bombay stood in urgent need of new docks—enlarged Custom House premises—extended wharfage and quay accommodation, with covered sheds—large warehouses—and an improved system of landing cargo.

The first section undertaken was from Bombay to Callian, a distance of 33 miles, with a branch to Mahim, 1½ miles. It was called the experimental line—was commenced in February, 1851—and the portion from Bombay to Tannah, being a length of 20 miles, was opened for public traffic on the 16th April, 1853. The principal works upon it were the embankments over the Sion marsh, the two viaducts connecting the island of Salsette with the Concan, in one of which there was a navigation opening, 84 feet wide, spanned by wrought iron plate girders, and two short tunnels. The permanent way chiefly laid with transverse wooden sleepers, but 6 miles were on the iron pot sleepers; the rails were 84 lbs. to the lineal yard, of the double T form, as far as Tannah, but beyond they were only from 65 lbs. to 68 lbs. a yard, except on the two Ghaut inclines.

From Callian diverged the South-eastern extension to Poonah and Sholapore, and by the proposed extension to the river Kristna and the Madras Railway to Madras—and the North-eastern extension to Nussick and Jubbulpore, to join the East Indian Railway from Calcutta, by which also a communication would be effected to the North-west provinces of India.

The first section of the South-eastern extension from Callian to Campoolee, a distance of 37¾ miles, contained no work of a special character, but was remarkable for the extraordinary floods and rapid torrents to which it was exposed on both sides. It had been made for a double line, but only one road had been laid. The average cost, exclusive of rolling stock, was only £4,500 per mile.

The Bhore Ghaut Incline, which was expected to be finished about three years hence, was 15 miles 68 chains in length, with a total rise of 1,831 feet. The steepest gradients were 1 in 37 and 1 in 40; short lengths of level and of 1 in 330 being introduced, to facilitate the working of the engine in the ascent. It comprised twenty-five tunnels, eight viaducts, a large quantity of retaining walls, upwards of one million and a quarter cubic yards of cutting, chiefly rock, and nearly two millions cubic yards of embankments. The estimated cost of the incline was £750,000. It was divided into two banks by what was called a reversing station at the eleventh mile. This sub-division was adopted to increase the length of the base, in order to flatten the gradient and reach a higher level, where the main features of the Ghaut margin, near Khundalla, were encountered. Without this expedient, the practicability of changing the direction of the line would have been confined to the effect of curves of small radius; but with the device of the reversing station, the direction was altered at a very acute angle, by means of points and crossings. The peculiar difficulties upon this incline were the unfavorable nature of the hot and rainy seasons; fatal epidemics which dismayed and dispersed the people employed upon it; the lofty and precipitous character of the ground impeding the haulage of materials and harrassing every one engaged in the operations; the extensive and sudden slips upon the mountain sides; the extreme hardness and solidity of the rocks; the scarcity of water and the want of necessaries and comforts for the men.

The next section of the South-eastern extension, from Lanowlee, the summit of the Bhore Ghaut Incline, to Poonah and Sholapore, was 205½ miles in length, of which 185 miles were already completed, with a ruling gradient of 1 in 132. The cuttings were in trap rock, moorum, and soil; and the embankments were composed, chiefly, of soil and moorum. There were 22 viaducts, 359 bridges, and 454 culverts, all built of substantial masonry. One peculiarity of this district was the violence and suddenness of the floods, which descended without an hour's notice, and gathered into torrents upon spots of which there was no trace or warning upon the surface of the country.

Beyond Sholapore, to effect the junction with the Madras line, the works had not been commenced.

Returning to Callian, the first section of the North-eastern extension, reaching to Kusarah, a distance of 26 miles, gradually climbed by steep gradients, of which a great portion was 1 in 100, up the flank of a long mountain spur, that projected from the Ghaut range. It contained upwards of half a million yards of cutting, chiefly trap and basaltic rock, and more than one million and a quarter cubic yards of embankment. There were four viaducts, 44 bridges, and 117 culverts. By means of this section 849 feet of the ascent were surmounted.

The altitude remaining to be overcome by the Thul Ghaut Incline, which was 9½ miles long, was thus reduced to 972 feet. At 3¾ miles there was a reversing station, similar to that upon the Bhore Ghaut Incline. The steepest gradient was 1 in 37. There were eight tunnels, six viaducts, 11 bridges, and 34 culverts. The cost of the incline would amount, it was believed, to about £450 000.

The next section of the North-eastern extension ran from the summit of the Thul Ghaut Incline, at Egutpoora, by Nassick, across the fertile valley of the Godavery, and the Indyhadree range, along Khandeish to Bhosawul, the point junction with he Oomrawuttee and Nagpore branch. The principal works upon it were the viaducts over the rivers Godavery, Kadoo, Munnair, and Wangoor. The two former were composed of masonry arches, and in the latter the openings were spanned with triangular iron girder.

On the last section from Bhosawul to Jubbulpore, a distance of 328 miles, the operations were only in a preliminary state. The viaducts over the rivers Taptee and Nerbudda would be important works, having flood streams of 70 feet and 90 feet deep respectively.

On the Oomwaruttee and Nagpore branch which was about 263 miles in length, the operations were only just commencing. The largest works would be the viaducts over the rivers Nalgunge and Wurdah.

It was mentioned that there was no tunnel on any of these lines beyond the Ghauts, comprising a length of 782 miles.

The general style of design for these trunk lines was derived from the model of the late Robert Stephenson's English railways. The character of the works was plain, substantial and durable; such as would provide for the regular and expeditious conveyance of a heavy and increasing traffic in goods, and the accommodation of numerous passengers, at a moderate working cost, and at a reasonable expenditure in maintenance.

The geological nature of the country was volcanic. As effecting engineering operations the destructible nature of the slopes of cuttings and embankments made of the black soil, the facility of excavating moorum, its firmness for slopes and embankments and frequently suitability for ballast; the advantage of having rock foundations for the crossings of rivers and streams, and also of being able to make tunnels without either lining or laces, and the fine quality of the stone for building purposes and facilities for quarrying it, were worthy of special notice. On the other hand, the black basalt was so extremely hard, as to render progress both tardy and expensive, and the mountains were in many cases so precipitous, as to prevent the sinking of shafts, thus limiting the mining of tunnels to two faces only. The existence of large quantities of kunkur, a variety of fresh water limestone, and the want of good brick earth, were also mentioned.

The physical geography of the districts of Western India traversed by the Great Indian Peninsula lines might be briefly described as the plain of the Concan, elevated very little above the level of the sea. Then the abrupt scarp of the Syhadree mountains, the least altitude of which above the sea was about 2,200 feet, and beyond them the plain of the Deccan, on the South-eastern extension, gradually sloping down towards the Eastern Coast of India; while upon the North-eastern extension the country presented the bold features of the rivers Taptee and Nerbudda, with three parallel chains of mountains called the Indvhadree, the Santpoora and the Vyndhya ranges. The altitudes of various known spots along the railway were then given, including, among others, the following:

	Feet above high water mark at Bombay.
Level of ground at Bombay terminus	11
Foot of Bhore Ghaut Incline	196
Top do. do.	2,027
Foot of Thul Ghaut Incline	940
Top do. do.	1,912

The extraordinary quantity of rain which fell during the monsoon, from June to September, was then alluded to, and it was stated, that the heights of known floods where the railway crossed some of the principal rivers varied from 25 feet at the Waldhur, to about 70 feet at the Taptee, and 90 feet at the Nerbudda.

The materials procurable in India for railway purposes were then succinctly noticed. In reference to the manufacture of Indian iron and the supply of coal, it was remarked that active and successful operations depended more upon the completion of railway communications, than the railways did upon a local supply of those materials. The properties of a few of the various kinds of woods which had been extensively used were then stated. Those which had been successively converted into sleepers were, teak, blackwood, khair, errool, and red eyne. The cost of a sleeper varied from four shillings to seven shillings and seven pence, the average price being about six shillings. Tolerably good bricks had been occasionally procured and used in arches, but in such cases a proportion of only 20 per cent. had been selected from the best native kilns. The price ranged from ten shillings to twenty-four shillings a thousand. Gunpowder cost when made upon the spot, about thirty-four pounds per ton.

Native labor by which these works had been executed was cheap, but very inferior to that of England. Nearly one hundred thousand men had been employed upon the Great Indian Peninsula Railway lines at one time, and as many as 20,000 on the Bhore Ghaut Incline alone. The wages of the several classes per day were now: native maistries, or foremen of masonry, brickwork or carpentry, 2s. 6d.; masons, 1s. 9d.; bricklayers, 1s. 3d.; carpenters, 1s. 6d.; smiths, 2s.; miners, (a very large class,) 9d.; excavators, 7½d.; and laborers, 6d. The following table was given of the relative cost of each kind of labor in England and in the Bombay Presidency; it being understood to refer to simple labor only, and not to the cost of finished work:

Class of labor.	Proportion of work done by each. Engl'd.	Bombay.	Relative cost of labor in each country. Engl'd.	Bombay.
Masons	2½	1	1⅛	1
Bricklayers	4	1	1	1
Carpenters	3	1	1⅛	1
Miners	3	1	2¼	1
Excavators	3	1	1½	1
Laborers	3½	1	1⅝	1

The whole of the Great Indian Peninsula Railway had been executed by contract, and this, it was believed, had led to remarkable economy in the construction of the various lines. The average cost of the opened portions had been about £8,000 per mile. The introduction of the contract system into India, on a large scale, was an important effect of railway enterprise, and it was thought that its advantages could not be long confined to railway construction.

The prices of the principal kinds of work, including all the usual contract stipulations, had ranged as follows:

	Cubic yard.
Earthwork in embankments, under ¼ mile lead from	6d. to 7½d.
Cutting in earth or moorum, do.	7½d. to 9d.
do. rock	13d. to 30d.
Tunnel	£21 10s. to £33
Brickwood in arches	15s. to 30s.
Coursed rubble masonry in arches.	27s. to 36s.
Ashlar	1s. 7½d. to 3s. cub. ft.
Block in course	16s. to 35s. cubic yard.
Coursed rubble	14s. to 24s. do.
Rubble	9s. to 14s. do.
Woodwork, teak	4s. to 6s. cubic foot.
Ballast	13½d. to 16½d. cub. yd.
Laying permanent road	2s. to 2s. 10½d. lin. yd.
Post and rail fence	18d. to 24d. do.
Dry rubble wall	2s. 6d. to 4s. do.

This did not include the Ghaut Inclines, which were exceptional.

Railway enterprises had already produced important effects in Western India. It had earned, at a remarkably low tariff, more than the guaranteed dividend. The working expenses had been low, notwithstanding the dearness of imported fuel and European superintendence. It had afforded the advantages of the best mode of conveyance to immense numbers of the poorest and lowest orders of the people. It had generated for itself new sources of traffic. It had achieved its success in competition with water carriage, and when it was only in a fragmental state. Although constructed in what was erroneously called an expensive style, the traffic had already demanded the partial laying of a second line of rails. It had raised the wages, and increased the effectiveness of native labor, and profitably employed thousands of the carriers of the country. It had opened quarries and brickfields, had impelled trade into unwonted activity, and drawn largely upon the resources of the country. It had lessened the expenditure of the State, by its cheap conveyance of mails and troops, and had augmented its income, by large payments of tolls and duties.

Product of the Precious Metals.

The annexed interesting statistics of the precious metals we have received from Mr. D. M. Balfour, of Boston:

The following statement will exhibit the product of the precious metals throughout the world, in 1859:

Countries.	Gold.	Silver.	Total.
America.	$93,434,355	$40,000,000	$133,434,355
Europe..	24,000,000	7,000,000	31,000,000
Asia	13,000,000	4,000,000	17,000,000
Africa	3,000,000	1,000,000	4,000,000
Australia.	76,000,000	1,000,000	77,000,000
Oth. countries ..	1,000,000	1,000,000	2,000,000
G'd tot.	$210,434,355	$54,000,000	$264,434,355

The following statement will exhibit the annual product of the precious metals at other periods:

A. D.	Gold.	Silver.	Total.
14	$800,000	$4,000,000	$5,000,000
500	200,000	2,800,000	3,000,000
1000	120,000	880,000	1,000,000
1492	100,000	150,000	250,000
1600	2,000,000	9,000,000	11.000,000
1700	5,000,000	18,000,000	23,000,000
1800	15,183,924	37,158,336	52,342,260

1859..	6,152,000,000	5,436,000,000	10.588,000,000

The following statement will exhibit the quantity of the precious metals estimated to have been obtained from the surface and bowels of the earth, from the commencement of the Christian Era to the close of 1859:

	Gold.	Silver.
A. D. to 1492.	$3,841.945,891	$521.424,109
1492 to 1842.	2,839,000,000	5,913,000,000
1843 to 1852.	642,000,000	394,000,000
1853 to 1859.	1,486,000,000	361,000,000
Grand total.	$8,808,945,891	$7,189,424,109

	Total.
A. D. to 1492	$4,363,370,000
1492 to 1842	8,752,000,000
1843 to 1852	1,036,000,000
1853 to 1859	1,847,000,000
Grand total	$15,998,730,000

Journal of Railroad Law.

THE FENCING OF RAILROADS A POLICE REGULATION TO ENSURE PROTECTION AND SAFETY TO PASSENGERS, AND NOT TO PROTECT THE OWNERS OF ANIMALS.

An interesting case has recently been decided in the Supreme Court of the State of Indiana, in which the intention of the State Legislature in reference to the act providing for the fencing of railroads, was thoroughly considered. It appears that the constitutionality of the act was called in question upon the ground that it was passed subsequently to the incorporation of the railroad, and effected vested rights, and impaired the obligations of a contract.

The action to which we refer was commenced before a Justice of the Peace by one Fulton, and was brought against the New Albany and Salem Railroad Company, to recover the value of a mare, alledged to have been killed by the locomotive of the company. The plaintiff recovered $100 before the Justice, and upon appeal to the Circuit Court recovered the same amount. There was no allegation, in the pleadings, of negligence; and the recovery was sought under the act of March 1, 1853, by which companies were required to fence their roads, or hold themselves liable for animals injured for want of such fences.

The main point argued in the case, upon the appeal to the Supreme Court, was as to whether the act referred to was constitutional, and that part of the opinion affirming the judgment of the Circuit, and referring to this point, was as follows:

HANNA, J.—In the argument, this question is treated as one affecting the rights of the parties to this suit alone. This is too circumscribed a view of the intention of the law making power, in the enactment of the statutes regulating the fencing of railroads, and in reference to animals running at large. It is clear from the context of the latter statute, that the Legislature, by its enactment, was looking more to agricultural interests than to the protection of railroad property. The former

statute is, in our opinion, in the nature of a police regulation. By its terms, railroad companies are required to fence their roads, or hold themselves liable, to a certain extent, for animals injured for the want of such fences. The Legislature certainly possessed the power to incorporate such a provision in a charter, or in a general law authorizing the formation of companies. Such power has been heretofore exercised and sustained in New York. Here, our Legislature did not incorporate the regulation in the charter of the appellants, but after the construction of the road attempted to prescribe it. It is insisted that by the act, additional and heavy burdens are attempted to be fastened upon the company; that it is in reality an alteration of the charter, when it was provided in the original charter that no alteration should be made; in a word, that the act is unconstitutional, because it interferes with vested rights and impairs the obligations of a contract. It is assumed that the act of the Legislature granting to the appellants certain franchises, and the acceptance of the act and exercise of the franchises by the company, are a contract.

We shall not stop to enquire into the rights, or rather to limit our enquiry into the rights and remedies which exist, as between the company and the owner of an animal that might chance to be injured on the road, or the power of the Legislature to prescribe rules in reference thereto, if his rights were alone involved. The stockholders of a railroad company have large amounts vested in the enterprise, and those who avail themselves of that mode of transporting property from point to point, might likewise risk large amounts in value aboard the cars of such company.

Whilst the business of the company should be confined to the transportation of property alone, the power of the Legislature to impose new and additional burdens regulating such manner of transportation, may be, in our opinion, in some instances questioned, where no serious question could arise, as to the exercise of that power, if the company should undertake to transport passengers. This arises out of the fact that, the preservation of the life and limb of the citizen, is, by the law, regarded of more consequence than the protection of his property. When power is granted to organizations to prepare ways for carrying passengers from point to point, with great celerity, but by the application of a propelling agent of known danger and almost irresistible force, it would appear but reasonable that a right should be lodged somewhere to maintain over such organizations a supervisory control, by which they might be compelled, under penalties, to adopt approved means, when discovered, of lessening the great danger arising from the use of such agent and mode of conveyance.

Such would be a police regulation—a regulation for the protection of the public. It is but the application of the principle that, he who possesses a right shall exercise it in a manner the least detrimental, injurious, or dangerous to his neighbor. The penalty under the regulation, in the case at the bar, is the payment to the owner of the value of the animal killed. It is in this respect, better calculated to accomplish the desired end, than a fine paid to the public might be. To the company it is the same, whether the individual or the public should receive that amount, but to others it is different. The reception by the owner of the value of his property, is intended to prevent heart-burnings and disputes, and to check the outbursts of angry passions, in a form that might be disastrous to human life, by the perpetration of malicious mischief to the work itself.

By the first and second sections of the act of Congress of 1847, the number of passengers to be taken on board certain vessels to be carried to and from the *United States*, is fixed in proportion to the space occupied. As a penalty for a violation of the law, the master of the vessel is subject to a fine of 50 dollars, for each passenger over; and if the excess is more than twenty, the vessel to be forfeited to the *United States*.

In the case of *The United States vs. The Brig Neurea*, it is said that "the object of the act in question is the protection of the health and lives of passengers from becoming a prey to the avarice of ship owners." There is no intimation that the act is invalid, but to the reverse, the information was sustained. If we are correct, the object of this statute is, among other things, to prevent the lives of passengers from becoming a prey to the avarice of railroad owners.

By the act of Congress of July 7, 1838, entitled "An act to provide for the better security of the lives of passengers on board of vessels propelled in whole or in part by steam," it is declared that, "It shall be the duty of the master and owner of every steamboat, running between sunset and sunrise, to carry one or more signal lights, that may be seen by other boats navigating the same waters, under the penalty of 200 dollars." This act has been held, in all its provisions, obligatory upon the owners and masters of steamers navigating the waters of the United States. Thus it is seen that the right of the individual citizen to engage in the business of carrying passengers to or from ports of the *United States*, and upon the waters of the *United States*, in boats propelled by steam, is restrained and regulated by statutes. Suppose in the first case cited, owners had vested large sums in the construction of vessels, destined to the business of carrying passengers, before the passage of the statutes, and that thereby the number that might otherwise have been conveyed, and the profits that might have accrued, were reduced one-third. Would not each enactment have been as much an enfringment of individual rights—as much an interference with legitimate business—as could arise under the enactment now in question. In point of fact it would be, and the only reason we conceive, that can be even plausibly urged, to strike down the one enactment while the other is sustained, would be upon the ground that the legislature, by the enactment authorizing the construction of the road, divested itself and all future bodies of like character, of the power to make regulations to insure the safety of passengers upon such road.

One of the "unalienable rights" of man is the "pursuit of happiness," included in which, as generally understood, is the right to acquire, and quietly enjoy property. Yet by these acts of Congress, this unalienable right to acquire property is to a certain extent infringed; the right of the individual is treated as secondary and subordinate to the general welfare. If the legislative body possesses the power to regulate the enjoyment, by the citizen, of an inalienable right, we cannot well conceive how such a body could grant to a few of the citizens of that state, when organized into a body politic, rights of higher dignity, or more sacred character, than those generally recognized as unalienable.

Viewing in this light the questions involved in the case at bar, we are, we repeat, clearly of opinion that the statute should be considered as a police regulation, and, as such, is valid and binding upon all railroads, whether constructed under charters granted before or after its publication.

A Railroad Commissioner, subscribing for Stock, and certifying to the Governor, that the Subscriptions have been made in good faith, is estopped from setting up, as a Defence, that the Subscription was made on Conditions not fulfilled.

To enjoy the fruits of responsibility, and yet escape from its liability, may be very desirable; and a condition of things likely to produce this result is, certainly, much sought after by men of financiering ability. But such efforts will not bear the scrutiny of the law, much less the application of those universal principles of equity, which laborious jurists dig from the inexhaustible mines of Truth and Justice.

The case we have before us is an action decided in the Supreme Court of Pennsylvania, and was brought by the Pittsburg and Steubenville Railroad Company against Thomas Bavington, to recover nine unpaid instalments of $10 each, on twenty shares of the stock of the company, subscribed for by the defendant, with the statutary interest of one per cent. a month, from the time of the respective calls.

The defendant was one of the commissioners appointed by the act of incorporation, to receive subscriptions to the stock of the company. He himself subscribed for twenty shares, of $50 each; attached to which was a condition "that no subscription should become due and valid, until the sum of $200,000 should be *bona fide* subscribed in the books of the company:" and "provided the road comes within half a mile of Florence." The defendants subsequently united with the other commissioners, in certifying to the Governor, that above ten per cent. on the capital stock of the company had been subscribed; that he had subscribed for twenty shares himself; and that the subscriptions certified were in all respects made in good faith, and agreeably to the provisions and requirements of the acts of Assembly and the laws of the Commonwealth; and that five dollars per share had been paid in on the several subscriptions. On this certificate, letters patent were issued to the subscribers. The road was located more than three miles from Florence. Still later, the defendant with others signed a paper, giving notice of an election for officers of the company, for its organization under the charter.

A verdict and judgment having been rendered for the plaintiffs, for $1,436 74, the defendant removed the cause to the Supreme Court, and assigned, among a number of other points, for error, the charge by the court below; which was to the effect, that the defendant was estopped by his acts as commissioner, from alleging that his subscription was conditional.

The Supreme Court affirmed the decision of the lower court; and that part of the opinion, bearing upon the question as to whether the defendant

was estopped by his acts as commissioner, from alleging that his subscription was conditional, is as follows:

STRONG, J.—The main question in this case is whether the defendant is liable to pay the amount of his subscription, without regard to the conditions attached to it. The question involves an inquiry into the nature and force of the subscription itself, and into the effects of the defendant's subsequent acts.

It may be premised that by the provisions of the act of Assembly of February 19th, 1849, entitled "An act regulating railroad companies," under which this company was incorporated; subscription in the books of the commissioners entitles to membership. The second section of the act requires that the names of all subscribers, with the number of shares subscribed by each, shall be certified to the Governor, who shall, by letters patent, under his hand and the seal of the Commonwealth, create and constitute the subscribers into a body politic and corporate. Nor does the act contemplate any such thing as conditional membership, and of course, no such thing as conditional subscription. No discretion is vested in the commissioners. They have no right, under the law, to receive any other than absolute and unconditional subscriptions, and it is their duty to certify all that they receive. The State refuses to grant the franchise, until, at least, one tenth of the authorized capital has been subscribed, and relies upon the certificate of the commissioners, as the evidence that it has been. The object designed to be attained, by the requisition, that so much shall be subscribed, and $5 on each share paid, before the letters patent may issue, would be entirely defeated, if conditional subscriptions could be received. The commissioners are not required to notice conditions in their certificate and if they do, the Governor may not refuse the letters, if it be admitted that a conditional subscription is valid. The consequence is that a charter might be obtained, and its large privileges and powers granted, and yet every subscription be clogged with such conditions as to render it impossible to collect one-tenth of the capital, or even one dollar of it, beyond the amount of five dollars per share, paid at the time of subscription. Indeed, the conditional members or subscribers might, by their own vote, prevent the performance of the conditions and the enforcement of the subscriptions. Thus the projected improvement would be nipped in the bud, and the consideration which induced the Commonwealth to grant the charter wholly fails.

And if such a subscription is a fraud upon the Commonwealth, it is equally so upon the unconditional subscribers. It may have been the immediate motive to induce them to embark in the enterprise. At all events, it becomes the means of compelling them to pay the sums subscribed, when payment is unavailing to insure the construction of the road, and when therefore their whole investment must be lost; for without the conditional subscription the charter might not have been obtained, and consequently no subscription would have been collectable. But if the commissioners are public agents clothed only with limited powers, and if they are not empowered to receive any other than unqualified subscriptions, and if conditions operate as a fraud upon the Commonwealth, and upon co-subscribers, how can they be set up as a defence against an action to recover the amount subscribed? May a party avail himself of his own fraud either legal, or actual? And can he be a member of the corporation entitled to share its government and direct its policy, without contributing its means, or assuming any liability which can ever be enforced?

However this may be, it is clear, that the defendant is not in a condition to avail himself of any conditions attached to his subscription. His certificate to the Governor, followed by the issue of letters patent thereon, estops him from asserting that his subscription was not absolute. It is necessarily a waiver, a withdrawal of every condition. The certificate is false, if the subscriptions "were in all respects made and taken in good faith, and agreeably to the provisions and requirements of the afore-mentioned acts of Assembly, and laws of the Commonwealth." How can this be, unless the act of Assembly authorizes qualified subscriptions, and contemplates its grant of corporate powers on the faith of them, or unless the subscriptions were indefeasible? And when the certificate has induced the grant of the charter, and has closed a contract upon every co-subscriber, shall the defendant be permitted to say that his engagement was not what he solemnly represented it to be? Authorities in numbers are at hand, to show that he may not—but the question answers itself. It needs neither authority nor discussion, and it is a matter of law. It is a legal judgment upon the effect of a written paper signed and sealed by the defendant.

Cincinnati, Wilmington and Zanesville Railroad.

At the annual meeting of the Directors of this corporation, the Receiver of the road, WM. KEY, BOND, Esq., presented a manuscript copy of a portion of the statistics for the fiscal year ending April 30th, from which, and from the printed reports of preceding year, we gather the following comparative information, viz:—

EARNINGS.

From passenger trains—		
Through business		$2,669 94
Local		59,554 27
State Fair		6,893 90
Mail and Express		14,795 42
		$83,823 53
From Freight Trains—		
Through business	$5,876 70	
Local "	75,782 45	
Coal "	15,683 89	
		97,343 04
Total for year past		$181,166 57
Or per month of		$15,097 21

The earnings for the preceding year was $190,745 66, or per month $15,895 47.

EXPENSES.

Ordinary—	
Trains	$17,200 99
Machine shop	34,733 77
Roadway	38,820 42
Water	2,823 94
Fuel—5,478 cords	14,884 70
Buildings	2,173 36
Pass Department	5,607 72
Freight do.	11,139 97
Telegraph	245 28
Loss and damage, etc.	992 90
General expenses	7,096 97
Miscellaneous	6,797 27
Making the sum of	$142,841 63

—as the total ordinary expenses of the year. The corresponding expenditures for the preceding year being $139,841 63.

Extraordinary—	
State Fair Branch	$432 92
Rebuilding bridges	8,099 10
Injury from freshets	2,226 40
Side track	9 00
Wooden structures	1,152 02
Stone do.	133 31
Removing slips	1,097 85
Replacing trains	181 92
Sundries	108 71
Making the sum of	$14,341 23

expended in extraordinary repairs, against $32,148 39 expended the preceding year.

Capital expense—	
Depots and shop	$1,749 71
Ballast	3,989 73
Repairs const. engine	1,579 16
" gravel cars	284 12
Equipment	303 12
Oil, etc.	271 76
Real estate	261 77
Water station	567 41
Fencing	91 03
Or the sum of	$8,096 81

against $10,777 29, expended during the previous year.

The mileage for engines during the year was 204,901 against 206,555 for the preceding.—*Cincinnati Commercial.*

South Austria, Lombardo-Venetian, and Italian Central Railroad.

The general meeting of this company was held on Monday, April 30, at Vienna.

The report stated that the undertaking consisted of six groups of lines. The first was the line to Trieste and branches, of which 614 kil. were in operation, and 337 kil. in course of construction, total 951 kil.; the second group consisted of the line to Hungary 575 kil., all of which was in course of construction; the third group consisted of the line to the Tyrol, of which 220 kil. were in operation, and 140 kil. in course of construction, total 360 kil.; the fourth group consisted of the line to Venetia, of which 268 kil. were in operation, and 164 kil. in course of construction, total 432 kil.; the fifth group comprised the line to Lombardy of which 224 kil. were in operation and 234 kil. in course of construction, total 458 kil.; the sixth group consisted of the lines in Central Italy, of which 147 kil. were in operation, 135 kil. in course of construction, total 282 kil. The total length of line in operation on 21st Dec. last was 1,473 kil. (920 miles), and in course of construction 1,585 kil. (991 miles), total 3,058 kil. (1,612 miles. During the year the expenses on the Trieste line amounted to 5,608,311f. (£224,334) which was principally for the renewal of a part of the way. The lines to Hungary were estimated to cost 81 millions (£3,240,000) of which 44,987,987f. (£1,797,960) had been expended up to the 31st December last. The expenditure on the lines to the Tyro amounted to 2,930,114f. (£117,204) during 1859. The expenditure in 1859 on the line to Venetia amounted to 13,686,020f. (£547,440) and previously to 14,880,883f., total 28,566,903f. (£1,142,676). The expenditure on the lines of Lombardy amounted to 5,339,548f. (£213,582) during 1859, and from the commencement to 31st Dec. last to 31,869,855f. (£1,274,794). The expenditure on the Italian Central amounted to 9,652,395f. (£386,096) for the year 1859, and from the commencement to 31st December last to 35,366,269f. £1,462,650. The working stock consisted of 603 locomotives, 1,156 carriages, and 7,385 wagons, and the expenditure amounted to 43,228,624f. (£1,729,145). The total expenditure, including the above 89,041,903f. (£1,561,676) for the Lombardo line, and 45,355,975f. (£1,814,239) for the Trieste line, amounted to 312,548,942f. (£12,502,358). The call of 250f. (£10) per share on 750,000 shares produced 187,500,000f. (£7,500,000) and on obligations to 120,251,924f. total 807,751,925f.

(£12,310,077), showing an excess of expenditure over receipts of 4,806,567f. (£162,263). The gross traffic receipts for the year 1859 amounted to 43,-654,703f., on the Trieste line and branches to 7,-848,999f., on the Venetian line to 2,225,537f., on the lines to the Tyrol; and 5,744,381., on the Lombardo line, total 59,472,820f. (£2,378,913). The receipts on the line to Trieste showed an increase of 16,828,120f. (£673,225), which was principally derived from the war. The working expenses on the Trieste line amounted to 23,304,-430f., on the Tyrol line to 1,379,617f., and on the Lombardo-Venetian to 6,127,494f., total 30,811,-541f. (£1,232,462), leaving a balance of £1,146,451. The gross receipts per kilometre on the Trieste line amounted to 71,098f.,on the Tyrol line to 12.434f., and on the Lombardo-Venetian to 37,624f., average 46,572f. on the 1,227 kil.; the expenses amounted to 37,955f.; 7,707f.; 12,458f. average 24,122f. per kilometre respectively.

The net produce of the working was 28,661,278f. (£1,146,451). The working of the Trieste and North Tyrol lines for November and December, 1858 had produced, 1,224,344f. and the produce of the funds invested during the year amounted to 1,883,901f., making together a disposable sum of 31,766,523f. (£1,270,781). From this was deducted 669,890f. for proportion of interest on obligations, and 792,486f. for general charges, leaving 30,308,147f. The report showed that if 5 per cent. amounting to 8,125,000f. was deducted for interest on 750,000 shares calculated on the amount paid and on the first and second calls, and for four months on the third call for 50f. would amount to 10f. 83c. per share, leaving 22,182,146 net for dividend, out of which could be deducted 2,218,-215f. for contributions and reserve in conformity with two articles of the statutes, leaving a disposable sum of 19,963,932f. or 26.62f. per share, which, added to the 10.83f. for interest to bearer, would amount to a total dividend for the year 1859 of 37.45f. per share. But it was thought advisable not to divide more than 30f. per share, which would represent about 14 per cent. on the capital called up. Deducting the 10.83f. per share for interest there would remain 19.17f. per share which would absorb 14,377,500f. (£575,100) and leave 5,586,-432f. (£223,457). The interest distributed on the shares was 7.50f. leaving the remainder for dividend, namely 22.50f. per share, payable 1st May. Modifications in the statutes with respect to some of the lines would be requisite in consequence of the political events of last year. It was also proposed to pay on the 1st of November of each year 5 per cent. as interest, and on the first of the following May the dividend remaining out of the net profits.

Resolutions were passed adopting the report and statements of accounts, and declaring a dividend of 12 florins or 30f. per share for the year 1859; approving the agreement between the State on the one part, and the North and South Austrian Companies on the other part, for working the Central Vienna line for the year 1860 at 40 per cent. of the receipts; giving the Directors the necessary powers to carry out the same; and for proposing and accepting the modifications in the statutes required by political events, and also with respect to the deviation or abandonment of certain lines so as to promote the interests of the Company.—*Herapath.*

Lackawanna and Bloomsburg Railroad.

The extension of the Lackawanna and Bloomsburg Railroad from Danville, Montour County, to Northumberland, Pa., has been completed, and the trains commenced running on the 24th last. The road runs from Northumberland to Scranton, 79 miles—at the former point connecting with the Sunbury and Erie road, and at the latter with the Delaware, Lackawanna and Western, while at Rupert Station, 21 miles above Northumberland, the Catawissa road connects with it, forming a direct route to Philadelphia via the Reading Railroad, and to New York via the Quakake, Lehigh Valley and New Jersey Central roads.

Railroad Earnings.

The following is a statement of the earnings of the St. Louis, Alton and Chicago Railroad for May, 1860:

Passengers	$36 903 27
Freight	44,658 23
Mails, etc.	4,120 83
Total	$85,682 33
Total increase over May, 1859	31,847 33

The earnings of the Toledo and Wabash Railroad in May, 1860, were:

Passengers	$20,075 15
Freight	44,430 40
Mails and express	3,440 28
Total	$67,945 83
May, 1859	60,026 14
Increase	$7,919 69

The earnings of the Chicago, Burlington and Quincy Railroad Line, in May, were:

	1859.	1860.	Increase.
Freight	$80,252 60	$173,122 04	$92,869 44
Passengers	45,473 74	53,115 25	7,641 51
Mails & mis.	2,989 94	2,843 66	*146 28
Tot., 310 m.	$128,716 28	$229,080 95	100,364 67

* Decrease.

The earnings on the Chicago, Burlington and Quincy Road proper for the five months of the present year as compared with 1858 and 1859, have been as follows:

	1858.	1859.	1860.
January	$67,281	$51,396	$74,205
February	65,028	59,428	80,479
March	76,451	70,090	109,371
April	85,720	83,421	127,690
May	88,007	89,263	160,000
Total	$382,487	$353,598	$551,745

Increase in five months over 1859..$198,147

The receipts of the Grand Trunk Railway of Canada, for the week ending May 19th, 1860, were $56,099 13

Corresponding week, 1859	39,927 40
Increase	$16,171 73
Total traffic from July 1, 1859	$2,579,655 26
Do. for same period last y..	2,029,980 34
Increase	$549,674 92

The earnings of the New York Central Railroad for

May, were	$534,329 15
May, 1859	409,927 84
Increase	$124,701 31

The earnings of the Hudson River Railroad in May compare as follows:

May, 1860	$156,281 09
May, 1859	141,268 92
Increase	$15,012 17

The earnings of the Michigan Central Railroad in May were $158,599 98

May, 1859	127,145 77
Increase	$31,364 21

The earnings of the Cleveland and Toledo Railroad in May were $66,601

May, 1859	55,112
Increase	$11,489

The following is a statement of the earnings of the Buffalo, New York and Erie Railroad (Buffalo to Corning) for the month of May, 1860, compared with the same month of last year:

	May, 1859.	May, 1860.
Passengers	$11,423 05	$12,626 40
Freight	24,274 68	32,705 43
Other resources	1,686 86	1,686 86
Total	$37,384 59	$47,018 69

Mr. J. W. Alsop, Receiver of the Eastern Division of the Ohio and Mississippi Railroad, has made his second monthly report, as follows:

April 9, to cash on hand	$44,669 75
RECEIPTS.	
April 30, balances collected of agents	$6,688 84
Balances collected of the Adams Express Company	3,037 50
Amount received on account of April earnings	30,457 07
Amount received on account of Foreign roads	18,120 87
Amount received on Charges Account	31,935 70
Amount received from other sources	15,293 38
Total	$105,513 36
May 1. To Balance brought down	828,829 01
CREDIT ACCOUNT—EXPENDITURES.	
By amount paid arrearage for March	
Current expenses in operating road	$72,694 23
Amount paid on account of April Current Expenses	6,010 75
Arrearages prior to March	680 51
Paid for Construction Work	727 87
Paid drafts for charges on account with foreign roads	38,633 77
Paid interest and discount	1,306 85
Paid sundry office expenses	1,238 84
Paid for Telegraph Instruments	52 16
Paid foreign roads on account	9 12
Total	$121,354 10
Balance carried to May account	$23,829 01
Total	$150,183 11

This report is for the period commencing April 9, and ending April 30, 1860.

The earnings of New Haven and New London Railroad Company for the five months ending with

May, were	$44,667 83
Same months in 1859	35,546 53
Increase	$9,121 30

The receipts of the Illinois Central Railroad since the 1st Jan. last, are as follows:

	1859.	1860.
January	$132,024 80	$187,013 18
February	133,183 15	186 460 11
March	152,272 60	213,079 76
April	152,539 04	192,282 00
May	141,680 35	217,202 52
Total 5 months	$711,600 20	$996,027 57

Annexed are the details of the earnings of the Galena and Chicago Union Railroad for the month of May:

	1859.	1860.	
Freight	$84,144.09	75,724.97	Dec. 8,420.12
Passengers	38,822.80	34,448.09	Inc. 625.29
Mails, etc.	4,039.74	4,000.00	Dec. 39.74
Total	$122,007.63	114,178.06	Dec. 7,834.57

Corrected earnings for previous month. $93,253.84

Railroads of the State of New York.

American Railroad Journal.

Saturday, June 9, 1860.

Railroad Reports.

Railroad Companies will oblige us by sending us copies of their Reports as soon as they are published.

New Jersey Railroad and Transportation Company.

The annual meeting of the stockholders of this company was held at New Brunswick, on the 4th inst. The fiscal year terminated January 1, 1860. The gross receipts during that time were $1,025,-682.65, an increase on the previous year of $122,-224.20. The corresponding expenses were for 1859, $382,072.17, and for 1858, $349,370.73, being an addition of $32,701.44. The rate of expenses to the earnings is 37½ per cent.; in the previous year it was 38½; in 1857, 41½; in 1856, 44 per cent. The surplus earnings carried to profit and loss, the 1st January, 1860, after paying two half-yearly dividends of 5 per cent. each, is $181,-888.72; the year before, closing Jan. 1, 1859, it was $113,183.22; Jan. 1, 1858, $107,171.13, and Jan. 1, 1857, $85,257.84. Semi annual dividends of 5 per cent. have been paid during these years. The whole surplus earnings now amount to $500,-218.62, being equal to over 13 per cent. on the capital stock, and only about $187,781.38 less than the whole debt of the company, which is now $688,000. The whole number of passengers, not including commuters, carried in 1859, is 2,501,124, and the tons of merchandise, 98,007. The whole number of miles run over the road, by passenger, freight, and other trains, is 447,671. The ratio of running expenses for the current year of 1859 is 85.1 cents a mile. In the enumeration of passengers, the commuters are omitted. They are certainly increasing, 135 annual commuters being added during last year.

The passages of the whole number (1,175) during that period have been about 560,000, making the whole number 3,661,124. By adding the miles each passenger is carried, the sum total of the en-

tire miles traveled by all the passengers is found to be upward of 33,000,000, averaging a million for each mile of the whole road, and far exceeding any road in the country, if not in the world. The cost for carrying a passenger each mile is nine mills, and of transporting freight is three cents per ton. The gross amount received from passengers per mile is two cents each, which, after deducting nine mills for transporting, leaves eleven mills net on each passenger per mile. The freight computed in like manner, producing receipts of five cents per ton per mile, leave, after deducting the three cents costs and charges incident to transportation, two cents net per ton for each mile. The tax on capital stock and the transit duties paid the State for 1859 were $35,821.76, (nearly one per cent. on the whole valuation,) exceeding the previous year by $2,623.75. Dividends at the rate of 10 per cent. per annum have been paid as usual on $17,500 of the stock of this company, transferred to the School Fund. The amount received from commuters during the year was $64,511.86.

The following statement exhibits the financial affairs of the company for the last four years:

	1856.	1857.
Gross receipts	$910,637 61	$911,617 35
Expenses	400,715 89	376,866 03
Net earnings	509,921 72	584,751 22
Ratio of expenses to earnings	44 per cent.	41⅓ pr. ct.
Dividends	348,470 00	348,490 00
Surplus	85,257 84	107,171 18
Number of passengers.	2,278,918½	2,238,130
Tons freight	63,668	80,872
Miles run	407,682	496,032
Ratio of running exp's	0.98½	0.92 6.10
	1858.	1859.
Gross receipts	$903,458 45	$1,025,682 65
Expenses	347,370 73	382,072 17
Net earnings	534,087 72	643,614 48
Ratio of expenses to earnings	38½ per ct.	37½ pr. ct.
Dividends	362,450 00	374 000 00
Surplus	113,983 22	191 383 73
No. of passengers	2,100.998	2,501,124
Tons freight	85,460½	98,007
Miles run	398,781	447,672
Ratio of running expenses	87½	85 1-10

An extra dividend of 10 per cent in stock will be declared in January next, after which the surplus earnings, with the probable additions of the current year, will be full $300,000.

After referring to various matters relating to the ferry at Jersey City, &c., including the building of a new ferry-boat, the report proceeds to state that a double track will soon be on the Millstone road, and express a determination to reduce the present charge for a passage between Newark and New York about one-fourth or 2 cents per mile, to take effect on the 11th of June, when eight trains will run daily. A daily excursion ticket good to return, will be reduced to 80 cents; this, however, to be an experiment to last for a year, the right to go back to the old fare 40 cents being reserved. The report says:

The income from the Philadelphia trains is so comparatively small that if the whole should cease, and with it the expense of maintaining them, the way travel alone would pay a dividend of twelve per cent. As to the contract with the Camden and Amboy Company, which continues till January 1, 1869, it is therefore a great advantage to them. Besides the exclusive freight business between New York and Philadelphia, they have five sixths of all the passenger travel. The portion of fare to the New Jersey Company is never over two cents a mile, which is reduced to one and a half in some cases, and even to one cent, with no allowance for ferriage, our company receiving only from 30 to 60 cents a passenger, the Camden and Amboy $2 30 on $3. The grant by the last Legislature to the Hoboken Land and Improvement Company of a railroad from Newark to New York calls for some notice. The unprecedented character of the Hoboken supplement and the extraordinary course in procuring it, are well known to the stockholders, and have become matters of history. As this measure is sought to be justified on account of our terminating, as entitled to do by the contract, an unsatisfactory subsidy to the Hoboken Company of nearly $20,000 per annum, in virtue of which they had received $278,000; and as this contract and its termination was brought by the Hoboken Company to the attention of the Legislature on presenting their application, it is due to the Board to justify its action on financial grounds, to exhibit to our stockholders this notice, which stated the cause thereof. So far as the Hoboken supplement was intended to induce consolidation, coerce a subsidy, or sequester our bridges and roads, its very enormity defeats its execution. So far as it contemplates an assessment of our exclusive privileges, we are content to abide by the decision of the courts. If appropriate judicial tribunals should declare exclusive privileges invalid; or if valid, that they are capable of being assessed, we shall cheerfully acquiesce. Many believe that the exclusive protection afforded to early railway enterprises has attained its objects, and that all obstructions to grants for new roads, wherever they exist, should be removed, and if the precedent should be countenanced by high authority, enlightened by long experience and astute discrimination, it may be worthy of being promptly followed by free legislation for through as well as way roads, preserving however the revenues of the State. Hence our company has nothing to apprehend, as we shall avoid violations of contracts and faithfully maintain all our agreements and a just regard for the rights of others; and we shall expect towards our company a similar good faith and respect for our property and privileges.

The following gentlemen were elected Directors for the ensuing year: John S. Darcy, John P. Jackson, Dudley S. Gregory, Abraham O. Zabriskie, John J. Chetwood, John Acken, Henry R. Remsen, Hamilton Fish, William Whitney.

Nashville and North-western Railroad.

We learn that 14 miles of this road, extending from Hickman to Union City, have been completed, and that the prospects for the speedy continuance of the road at both ends are very good. Track-laying has been somewhat retarded of late, by the failure to receive the necessary supply of iron. Upwards of 20 miles more are in readiness for the track, which will be put down as soon as the materials arrive. Already rails for ten or twelve miles have been received, and a like quantity has just arrived at New Orleans, from Liverpool, whence monthly instalments of 1,000 tons each are to be shipped.

Charlton and Randolph Co. Railroad.

We learn from the St. Louis *Republican* that this company have closed a contract with Messrs. J. & J. Kelly, for the immediate construction of their road from Allen or Renick, on the North Missouri road, to Brunswick, a distance of forty miles. The work is to be commenced early in June. The *Republican* says:

They are the best railroad men in the State, for the reason that they know exactly what they are doing and take a hand in it themselves. The North Missouri has made a contract with this branch, which will prove mutually beneficial, and the increased earnings will go far to put the main stem on a right footing. Now that the Brunswick branch is under contract, there are a good many reasons why the counties of Carroll, Ray and Clay should begin the good work within their borders.

☞ In addition to their other business, Messrs. Parsons & Dobbs have commenced the manufacture of all varieties of Railroad Spikes, as will be seen by reference to their advertisement.

Staten Island Railroad.

This road was opened on the 2d inst. It extends from the Vanderbilt (or third) Landing to a point opposite Amboy, fourteen miles. The distance from the bay is nearly uniform, and is about a mile. The road was projected ten years ago, but the present management took hold of it about two years since. The President of the company is Albert Journeay, Jr.; Vice President, B. Kreischer; Secretary, Charles H. Chandler.

Boston and Chelsea Railroad.

At the annual meeting of the stockholders of the Boston and Chelsea Railroad, the following gentlemen were chosen Directors: W. W. Wheildon, J. W. Emery, G. G. Hubbard, Joseph H. Converse, John Low, R. E. Dennmon and Estes Howe.

J. H. Converse was chosen Treasurer and Clerk.

Taxation in Cincinnati for Thirty Years.

The following table exhibits the real property, rate of taxation and amount of taxes levied, in Cincinnati for the past thirty years. It is interesting because it shows at a glance the steady advance in the value of property in this city—now the fourth in wealth in the Union—during this period. It shows also the rate of taxation each year, which will doubtless raise the proper suggestion in the mind of the reader. In 1843 4 it will be seen that the enormous rate of $3.20 on the hundred dollars was levied. The particular cause of this is unfamiliar to us, but it may be well known to many.

This table was prepared by Mr. Lea, of the Auditor's office:

Years.	R'l Estate.	Personal.	Rate.	Taxes.
1830	$3,157,675	$1,048,529	$1.20	$51,435
1831	3,356,525	1,363,057	1.20	57,917
1832	3,717,785	1,620,924	1.35	72,667
1833	3,912,075	1,391,731	1.35	74,307
1834	3,972,000	1,355,990	1.45	79,131
1835	4,814,030	1,394,542	1.90	107,445
1836	4,881,880	1,661,024	1.85	126,458
1837	4,813,840	1,556,060	1.85	117,624
1838	4,985,500	1,574,516	2.10	141,237
1839	4,938,830	1,628,324	2.55	167,384
1840	4,781,890	1,440,108	2.45	151,201
1841	5,464,800	1,249,501	2.50	167,857
1842	5,840,950	1,147,484	3.00	209,651
1843	5,708,670	1,018,240	3.20	215,101
1844	5,885,650	1,059,632	3.20	222,249
1845	6,157,890	2,015,830	3.00	245,211
1846	6,817,740	3 390,330	2.95	286,388
1847	27,902,220	9,159,960	.95	362,748
1848	28,820,410	9,409,886	1.00	394,363
1849	32,622,500	8,731,174	1.33	566,109
1850	34,194,430	8,668,298	1.70	728,666
1851	34,578,460	11,430,364	1.50	690,132
1852	35,697,540	16,764,570	1.65	910,308
1853	36,520,040	30,321,148	1.85	1,236,561
1854	58,135,436	28,914,269	1.68	1,458,082
1855	60,335,932	24,994,948	1.48	1,262,897
1856	60,701,267	20,795,203	1.35	1,116,927
1857	61,340,971	25,104,120	1.50	1,296,676
1858	62,681,602	26,051,151	1.66	1,472,963
1859	63,746,316	29,292,788	1.64	1,584,110

Lexington and St. Louis Railroad.

There is no longer any doubt about the building of this road. It has been definitely decided on, the money has been subscribed, and proposals for the contract of constructing it are called for. The road is to run from Lexington and tap the Pacific Road in Johnson county. It will be of incalculable value to the people of Lexington, by furnishing them with rail connection with St. Louis, and an

important adjunct to the Pacific Road, since it will bring to it the trade of the wealthiest agricultural county in the State.—*St. Louis Eve. News, May 28.*

Debt of Missouri.

The regular semi-annual interest of the debt is being provided for by loans at the East, and otherwise. In all, it amounts, for city, county and State, to over a million every six months. That of the county, some $120,000, was provided for a week or so ago. That of the city, the Comptroller informs us, is also arranged for—$100,000 or so having been obtained at six per cent. per annum. No exchange will have to be bought for the city before August. She may, indeed, be a seller, in the meantime. For the State's larger amount nothing definite is yet provided; it is expected, however, that Mr. Buffington, the State Auditor, now at Washington city for the purpose, will obtain the $380,000 of two per cent. fund appropriated by government to Missouri, but which, we believe, has thus far been withheld by some quibble of the United States Attorney. With that amount secured, the State would rest easy. Without it, our bonds could be readily negotiated in the East, with the present ease in the money market there, at low rates, and the exchange saved to the State. —*St. Louis Democrat, 24th May.*

Life Insurance.

The recent divivisons and dissensions among several British Life Insurance Companies have induced some inquiry as to the stability of many companies that have attempted to procure business in the United States. The Superintendent of the Insurance Department of this State has in one case refused to issue a certificate to a company doing both a Fire and Life business, on the ground that a "Foreign company could not be allowed to carry on the business of both Life and Fire Insurance in this State, and that such risks should not be united in one company.

A certificate for a Fire business was refused in another case where the company is an English "partnership" and not a "corporation," and where the association is already engaged in the business of Life Insurance.

In another case the Superintendent reports that he has "revoked all Powers of Attorney given to collect interest on its Securities," until the assets of the company shall be satisfactorily shown to be sufficient to meet its obligations—its solvency being questioned. We learn by a late London paper, that a petition has been presented for the winding up of the *Phœniz Life Assurance Company and Marine Office*, of London and Liverpool, the petitioner being a Director. The principal claims arise by underwriting marine risks, which are understood to be considerable.

The number of Life Insurance Companies in London is obviously too great. The *Bankers' Circular* observes that at the opening of the new year it is important that we should note the varied changes which have taken place in Insurance Companies, from the commencement of 1844 to the end of 1858, within which short period 536 Insurance Companies were projected, 251 founded, and 208 ceased to exist; of these, thirty-seven are being wound up *in Chancery;* twenty-six *have died out*, and 155 *have sold and transferred their business to other offices.* The aggregate amount at present insured in the Life offices in the United Kingdom is estimated at £200,000,000 sterling.

The Superintendent of the Banking Department properly remarks on the subject of accumulated premiums:

"Life Insurance particularly is a speciality; and the accumulated funds which are held by a company for a lifetime as a Savings Bank, in sacred trust for the widow and orphan, *should not be liable to be swept away by a storm at sea or a conflagration on land.*"

One decided advantage which our American companies have over the British is in the larger rate of interest realized from investments, viz: seven per cent. instead of three or four. An objectionable feature in the management of some British offices is the investment, in part, of surplus funds in the shares of Joint Stock Banks, a practice not permitted in the United States.—*N. Y. Courier and Enquirer.*

Portland, Saco and Portsmouth Railroad.

The annual meeting of this company was held in North Berwick, Me., on the 4th inst. His Excellency Governor Ichabod Goodwin of New Hampshire, President of the road, called the meeting to order, and presided. The report of the Directors was then read. It contains a statement of the affairs of the road for the year ending May 31—the income for May being estimated. The receipts were $234,586.82, and the expenditures, including $10,000 charged to renewed account, $114,334.03—making the net income $120,252.79, and the surplus earnings of the year, after paying dividends, $30,252.79. The balance to profit and loss account, May 31, 1860, after charging dividend payable in June, is $81,990.88. The net income of the road over last year is $16,223.63. The road is said to be in as safe and prosperous a condition as any road in New England. The equipment is also in good condition.

After the acceptance of the report, the meeting proceeded to the choice of Directors, when the following named gentlemen were elected without opposition: Ichabod Goodwin, Portsmouth; George M. Browne, Boston; Francis Cogswell, Andover; Thomas West, Haverhill; Charles E. Barrett, Portland; James Hayward, Boston; Nathaniel Hooper, Boston.

Pennsylvania Railroad.

Sheriff Eyster, of our county, last Wednesday afternoon levied on a number of locomotives, and other property, belonging to the Pennsylvania Railroad Company, on an execution issued by Mr. Knox, Attorney-General of the State, for tonnage tax due the Commonwealth. In a trial of the case before Judge Pearson last summer, it will be recollected that the State obtained a judgment for over $300,000 against the railroad company for tonnage tax due the State Treasury under their charter, from which the company appealed to the Supreme Court, but the suit remains undecided. Some $300,000 of tonnage dues have accrued since that time, for the recovery of which another suit was brought against the company by the State, and a judgment obtained, on which this execution was issued. The railroad company gave security for the payment of this amount, should the suit be decided against them, and the property levied on was immediately released.—*Harrisburg Patriot, 26th ult.*

Richmond Fredericksburg and Potomac Railroad.

The twenty-seventh annual meeting of this company was held in this city this week. The report shows that the income of the company for the past year was $287,949 64, (being $3,082 67 more than the previous year,) and the whole expenses of the year, including extraordinary, $135,731 60, (being $3,893 46 less than the previous year.) Among these last were a new brick engine house and turn-table at Milford Depot, a new depot at Guiney's, and a new bridge at Accokeek Creek. Deducting expenses of every description from the gross income of the year, leaves a balance of $152,218 34 of net profit, which has been applied, after payment of interest and arrearages of the same, and dividend on guaranteed stock, to the extension of the heavy rail between the Rapahannock and Potomac, and to the payment of that portion of the debt maturing in London in 1860, of which the owners desired payment.

Of the debt due in London in 1860, $41,447 70 only is unpaid, a large portion of which has been remitted. The Board of Directors may, it is believed, safely recommend the payment of money dividends on the 1st of November next. On and after that date they see no reason to doubt that dividends of not less than eight per cent. per annum will be regularly made to the Stockholders, semi-annually, in money.

The following officers were unanimously re-elected.

President—Edwin Robinson.

Directors—G. A. Myers, G. W. Munford, R. W. Haxall and Charles S. Mills.—*Richmond Inq.*

Richmond and Petersburg Railroad.

By the annual report presented at the meeting of this company, held this week, in this city, we find that during this period the total receipts amount to $151,905.06, or $7,251.41 more than for the corresponding period during the previous year. The ordinary current expenses during the same time amount to $67,024.16, or $2,777.92 less than the proportion for the previous year, and only 44⅛ per cent. of the income of this year.

The company, besides defraying the ordinary expenses of its regular business, and others not strictly chargeable to this year's operation, consisting of considerable additions to the real estate and other property of the company, and putting the Manchester and Petersburg turnpike in complete repair, after paying the interest on its funded debt and two semi-annual dividends, have discharged $22,153.82 of the principal of its funded debt due last July—leaving of that debt only $902 unpaid, because uncalled for, and leaving a balance of cash on hand, on 31st March, of $10,038.49. All the old officers were re-elected.—*Richmond Inquirer.*

Ottawa Canal.

The Canadian Government is taking further measures towards canal transportation.

Mr. Clark's Report on the Ottawa Canal Survey shows the whole length of navigation from Montreal to the mouth of French River on Lake Huron to be 430 miles; of which, including the Lachine Canal, the artificial waterway would be only 29 miles, to provide for the descent and ascent of the largest class of Propellers employed upon the Upper Lakes. He proposes the locks to be 250 feet long, and 45 broad; and the canals generally 146 feet wide at bottom and 12 feet deep, allowing vessels of 1,000 tons to pass without breaking bulk. The estimated cost of the whole works is $12,026,000, a sum although large in itself, insignificant when compared with the attainment of so great an object, and less than $30,000 a mile for the extent of navigation obtained.

Springfield, Mt. Vernon and Pittsburg R. R.

We understand that about three thousand tons of iron, for the track of the Springfield, Mt. Vernon and Pittsburg Railroad, have been delivered by the English contractors, at Cardiff, ready for shipment to this country, and that arrangements have been completed for the delivery of five thousand tons more in a short time, at the same point. The company design, as soon as this iron shall arrive, to lay the track between Mt. Vernon and Delaware, by which means a direct railroad communication will be had between Mt. Vernon and Cincinnati, in time for the next State Fair at Dayton.—*Cin. Inq.*

Texas Railroads.

Of railroads we have to report progress. The work on the New Orleans road is coming on finely. Large companies of workmen are engaged at different points along the line, and the contractors are using every exertion to get their road through from Houston to the Sabine by November. The bridge-contractors will have their work done in ample time. The Central Company have determined to put fifty miles more of their road under contract at once, with a view of having it completed by July, 1861. The Brazos bridge will be completed in July. The grading from Chappell Hill to Brenham is about completed. It is presumed the iron will be laid down in time for the fall trade. The B. B. & C. Company have placed that part of their road from Columbus to LaGrange under contract. They will, in a short time, open their road to Columbus. We understand the grading of the Western Division of the H. T. & Brazoria road is now nearly completed to Wharton.—*Houston Telegraph, May 24.*

Charlton and Randolph Co. Road.

Gov. S. PRICE has resigned his office of President of the Charlton and Randolph Co. Railroad, and Mr. MOBERLY has succeeded him for the construction of the road from Brunswick to the junction with the North Missouri Railroad. We learn that satisfactory arrangements have been made by Mr. MOBERLY with the N. M. R. R., and as the necessary funds and lands have been subscribed for the completion of the work upon the road, it will at once be given out to the contractors. It is believed that the connection will be made by next winter.—*St. Louis Rep, May* 28.

12.	" 18 "		1 to 1	24.	" 33 "		1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail**, in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.
THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—
1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.
It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail**, upon receipt of the price. For sale at this office. Price **$1.**

SPERM, WHALE, LARD AND OTHER OILS,
For Railroads, Steamers, Machinery and Burning.

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil for Lubricating, and the **only** Oil that is in all cases **reliable,** that will **keep bearings cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.

TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the

EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851.
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855.
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime**, and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT**, branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels**, and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER, and MARBLE DUST**, all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale (Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every departme t of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.**, or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

ROSENDALE HYDRAULIC CEMENT.

ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.

E. M. BRIGHAM, Sec'y.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine**, and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.

For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

Houston Tap and Brazoria Railroad.

The Houston Tap, and the Houston, Tap and Brazoria Railroad are one and the same. The former, seven miles in length, was built by the city of Houston four years since, to connect with the Buffalo, Bayou Brazos and Colorado Railroad. When the charter of the Houston, Tap and Brazoria road was obtained, a purchase of the Tap road with its equipment was made of the city by the new company, at its original cost—130,000. From the Junction or terminus of the Tap road, the Houston, Tap and Brazoria Railroad Company have, within the past two years, completed a road to Columbia, 50 miles, at a cost of $12,000 per mile—making the whole cost of the road, including rolling stock, about $600,000. Beyond Columbia, west of the Brazos River, the road has been graded nearly 30 miles, and the iron will be laid down during the summer. The office of the Company is at Houston Texas; E. M. TAYLOR, President.

Texas and New Orleans Railroad.

We invite the attention of capitalists to the advertisement in another column of Messrs. C. CONGREVE & SON, and E. WHITEHOUSE, SON & MORRISON, of this city, offering for sale $500,000 Land Grant Mortgage bonds of this company. They are part of an issue limited to $1,500,000, secured by a mortgage upon the road bed and appurtenances of the entire line lying within the State of Texas—commencing at Houston and running thence due east to the Sabine river (the boundary line between that State and Louisiana), a distance of 106 miles. These bonds bear 8 per cent. interest, payable semi-annually, in this city; the principal re-imbursable November 1, 1878. They are further secured by mortgages upon twelve sections of land per mile, in the aggregate 12,000 square miles, or 768,000 acres. The estimated cost of the road with its appurtenances is $2,920,000. The resources of the company consist of $1,000,000 of stock, $420,000 of bonds to the State, at 6 per cent. interest, secured by a mortgage upon 70 miles of the road bed and equipment, and the $1,500,000 of bonds above referred to. The lands upon which the mortgage is based, have been donated to the company by the State of Texas, and comprise 16 sections of lands, of 640 acres each, per mile. The company has also a loan from the State of $6,000 per mile in United States 5 per cent. bonds. The following is a recapitulation of the security upon which the bonds rest, as set forth in the report of the company:

1st. They are a mortgage upon a railroad and its appurtenances of the estimated cost of $2,920,000, the net earnings of which cannot be less than $951,667, equal to 32¼ per cent. per annum.

2d. They are a mortgage upon 768,000 acres of land, given directly by the State to the company, the probable value of which will be equal to a treble redemption of the entire issue.

3d. As additional security for the prompt payment of the interest coupons—pending competition of the road for through business—are mortgaged by special trust deed, town and individually given lands, at present estimated at $600,000.

The Louisiana division of the Texas and New Orleans railroad commences at the terminus of the Texas division on the Sabine river, and runs thence to New Iberia, a distance of 115 miles. At this point it will connect with the New Orleans, Opelousas and Great Western Railroad when the latter company shall have constructed the additional 45 miles required to carry it to that point, from its present terminus at Brashear City. Contracts have already been made and arrangements entered into for the accomplishment of this object within the ensuing year. When these lines are completed, the cities of Houston and New Orleans will be brought within 14 hours of each other, and the time from the capital of Texas to New York will be reduced to 90 hours.

Up to the present time 45 miles of road have been constructed, and in every department the work is being prosecuted with an energy, which is a good earnest of completion within the present year. As illustrative of this is subjoined the sum of the report of the State Engineer of Texas to the Board of School Commissioners:

General Observations with which the detailed Report of the State Engineer of the State of Texas of his first examination of the Texas and New Orleans Railroad is concluded:

The character of the road so far as completed is decidedly good. It is as yet imperfect, as much drainage is needed to maintain the bed of the road dry and firm during the heavy rains in winter:

The road also needs ballasting and a general readjustment, yet it is decidely a good new road. The natural surface of the country being nearly a level, heavy grades are avoided, the line can at at an extremely small cost be maintained in a good condition, while the wear and tear to rolling stock will be small. The contractors have a force of about 400 hands at work upon the line of the road, and the few defects arising from hasty construction will in a very short time be entirely corrected.

The entire line of the company's road when completed will be about 223 miles in length, viz:

From the Sabine to Houston (Texas Division) .....106 miles.
Do., New Iberia (Louisiana Division)...117 "

Total distance.....223 miles.

This will give the connection with the City of New Orleans, as at New Iberia a junction is made with the New Orleans and Opelousas Railroad.

The distance from Houston to New Orleans by rail is 337 miles, which can easily be made in from 13 to 14 hours. Upon the communication being formed with the lines running north, Houston will be placed in from 84 to 90 hours' run of New York. This is no visionary result, but will be the daily practical result of the completion of this company's road. Its influences upon our state are so self-evident that no comments are necessary.

This company has its whole road and works un-

der contract, both in Texas and Louisiana. The stock and bond subscription for the Louisiana division amount to over one million of dollars, and will be increased during the present year.

In Texas, the company have now delivered on the line of the road 7,035 tons of iron, with all the requisite chairs, spikes, frogs, switch-irons, water tank fixtures, pile drivers, steam engines, and machinery for building piers and abutments, and putting up bridges. In fact, all the necessary implements and materials to insure the construction of a first-class railway with rapidity and economy. There are rails enough on the line of the road now to lay down seventy-five miles of track, besides 1,031 tons at Galveston and afloat, and advised 1,013 tons more—in all, 9,079 tons. Arrangements have been made for an additional quantity, to be shipped as rapidly as the company may need it. In addition to the iron now upon the line of the road, there are not less than 60,000 cross ties prepared and ready for laying down, and the contractors are rapidly getting out the balance needed to complete the entire Texas division of the road.

The bridges over the Neches, Trinity and San Jacinto Rivers, are now in course of construction, and are progressing at a speed to insure a speedy completion. All of these bridges are constructed on the plan of the Howe Patent Truss, the most approved wooden and iron bridges used for railway purposes.

The company have also a first-class river steamboat, the "Florilda," used for transporting the rails, machinery and other materials from the coast to the line of the road. The boat cost the company $32,000. They have also an A 1 screw steamship, the "La Crosse," used at sea for towing and lightering the iron and machinery ships, and doing other business for the company on the Texas and Louisiana coast during the construction of the road.

Seventy-five per cent. of the whole of the work upon the Texas division of this road, preparatory to laying the track, is completed, and the materials are on hand and ready for use.

Large amounts of land, and city and town lots, on the line of the road have been donated to the company by corporations and individuals, to promote the speedy and certain construction, amounting to at least $300,000, at a fair, low valuation at this time, and will rapidly enhance in value by the construction and opening of the road for public business.

Perhaps no road or corporation in the world ever presented itself to its government, asking aid and assistance, presenting a fairer record, or more worthy of patronage. Its evidences of good faith, and ability to prosecute to a successful completion the object for which its charter was granted are of such a character as to leave it no longer a question as to whether the road will ever be built, and I have no hesitation in expressing the opinion that the entire Texas division will be completed this year, unless prevented by more than the usual exigencies attendant upon railroad building, and I therefore respectfully commend this road to the favorable consideration of your honorable Board.

All of which is most respectfully submitted by

Your obedient servant

E. F. GRAY, *Civil Engineer*

Houston, April 21st, 1860.

Upon presentation of the foregoing Report, accompanied by the surveys required by law, the State authorities promptly paid over to the Company $180,000 in United States 5 per cent. Bonds, being the sum of $6,000 per mile on the first section of 30 miles of finished road. With like promptness, also, were delivered to them Land Warrants to the amount of sixteen sections, of 640 acres each, per mile—in all, 307,200 acres—which Warrants are now rapidly being located by experienced agents, on choice public domain, adjacent to the line of the road. Hereafter the Company will acquire the loan of $6,000 per mile, and the sixteen sections of land per mile, steadily on five mile sections, as they are finished. Already they are prepared to make application on a further distance of about fifteen miles. The maintenance of promptness on the part of the State may be relied upon.

This road when completed will, for some time to come, form the trunk line, over which the entire State of Texas will maintain its communication with New Orleans, and with all the States lying to the East. This fact must render it one of the leading and most productive thoroughfares in the United States. Texas has an area of something like 250,000 square miles, with a population of 600,000, which has trebbled since 1850. If must go on for a long time to come increasing, if not in the same ratio, much faster in the aggregate. It must soon become the leading Southern State in population, in the extent and value of its productions. The great market for its people will be New Orleans as soon as it can be reached.

By the time the above road is completed, there must be at least six hundred miles of completed railroad in Texas. Its numerous works are making rapid progress, and it will not be long before they will reach every well-settled portion of it. The liberal provision made by the State, renders the construction of railroads in it an easy task for its people. In no other State will they make such a rapid advance for the next ten years. Their number and importance renders this connection with the railroad system of the country a matter of public necessity.

Texas is now the great field for Southern emigration. This alone must give a large business to the proposed road. When opened, it cannot fail to become a part of a favorite and expeditious *overland* route to the Pacific. In fact, we know of no road for which there is a greater public necessity, nor hardly any that promises a more lucrative traffic.

Indiana Central Railroad.

The earnings of this road for the fiscal year ending January 1, 1860, were:

From passengers		$176,300 74
" freights		139,348 88
" mail, express, etc.		28,930 96
		$344,580 58

The disbursements were:

Repairs of track, bridges, culverts, and change of gauge of track	$31,496 30	
Repairs of engines and cars, including ch'ge of gauge of same	36,508 09	
Train hands	23,111 89	
Station expenses	23,765 12	
Wood	22,361 10	
Oil	4,308 72	
Miscellaneous	28,685 59	
		170,236 81
Net earnings		$174,343 77
Sales of lands		6,720 27
Incidental		1,599 25
		$182,643 29
Interest on 7 per ct. bonds	$42,000 00	
" 10 "	61,250 00	
" unfunded debt.	5,858 70	
Paid taxes	4,713 16	
Commission and discount	2,824 77	
Paid Dayton and Western R. R. Co.	57,137 12	
Paid 10 per ct. income bds.	7,150 00	
Incidentals	1,669 21	
		182,597 96
Balance		$45 33

The number of way passengers was 134,566; through passengers, 21,586—total, 156,152; of which 80,092 went west, and 76,060 east.

The number of miles run by trains was 297,205.

The equipment of the road consists of 19 locomotives; 15 first class passenger cars, 6 baggage cars, and 368 freight, cattle, and construction cars.

The report says:

The year, commencing with a very scanty surplus of agricultural products for transportation consequent upon the exceedingly short crop of 1858, has been a very trying one on most Western Railways, and the scantiness of freight, induced a most unwise competition at unusually low rates, and very much reduced the earnings of all lines from the freights actually carried.

The past season, along our line, we have had nearly average crops on the whole, consequently the latter part of the year the earnings increased so as to compensate for the decline in the earlier part. Products, however, owing to the absence of an active demand, were slow to move, and a large amount remained in the country to go forward during the ensuing year.

Travel has been unsually light during the entire year, owing to our population being closely engaged in producing and securing their crops, and the economy induced by the want of surplus productions, to furnish the means of travel and recreation. These causes will not continue to exist the ensuing year, and we confidently look for increased earnings from transportation of travel and freights.

Our line has been operated during the year with promptness and regularity both in the passenger and freight service, and the road-bed and superstructure have been maintained in good order.

It was deemed to the best interests of the Company, by a majority of the Board, to change the gauge of your road and of the rolling stock to four feet ten inches, to conform to the gauge of our immediate eastern connections, which was accomplished during the months of April, May and June, of last year, at a very considerable expense. It is proper to state that, in regard to the policy of the change and incurring the expense of it, there was not entire unanimity in the Board. But when it was resloved on, all united in carrying it forward to completion at the earliest day, hoping that the most sanguine anticipations of the friends of the measure might be realized.

Connected as we are with a different gauge on the one hand or the other, each has its advantages and disadvantages, and it is perhaps too early fully to decide which would be the preferable gauge for us, though we all unito in the hope that the expense incurred in the change may be more than repaid in the advantages arising from it, and in the increase of our business that was hoped for by the friends of the measure.

We have taken down, during the past year, the bridges over Flat Rock Creek at Lewisville, and over the Whitewater Valley Canal at Cambridge City, and replaced them with substantial trestle bridges, which from their cheapness yet strong character it was thought the best economy to construct.

We have also replaced decaying timbers in very many of our culverts and cattle guards, and put into our road-bed several thousand new cross ties; and we shall have to put in during the ensuing year a much larger number of new cross ties, to add to the goodness of our road and the safety of our trains.

Our iron rails have worn exceedingly well, scarcely equaled by any other rails in the country. For the first time since our line has been in operation we have had during the year about fifteen tons of our rails re-rolled at a cost of twenty-two dollars per ton, and shall probably have need to have a larger quantity re-rolled this year.

Allusion is here made to an accident which occurred in November last, by which three persons were killed, and another severely injured. The

pecuniary loss incurred by this disaster amounted to between $17,000 and $20,000.

We now have all the competing lines in operation that we may expect ever to have, and our earnings, considering the scarcity of freights and money in our country, we have held up very well, and with the more abundant freights from the crops of last year and the large pecuniary returns we feel hopeful that our earnings for the present will be materially increased.

Notwithstanding the extreme poorness of business for over one-half of the past year, our earnings from all sources show a small increase over the previous year—$344,580 58, against $342,-839 13 for 1858—and what is much more gratifying, the proportions of earnings from local business shows a steady increase over those for through business, clearly demonstrating that the strength of our line mainly lies in our local traffic, and that that traffic is developing and strengthening year by year, and that while our through business has undoubtedly reached its minimum, our local business of itself, by its increase, must add largely in the future to our aggregate earnings. In saying this much, however, we do not wish to be understood as admitting that we do not expect our through business to increase. On the contrary, with the advancing prosperity of the country we confidently think that our through business most mutually increase.

The building of Railways in the west has been in advance of the urgent needs of the country. But the country is surely advancing in improvements and wealth, and will in a short period of time reach the point at which all prudently constructed lines will be needed and will be remunerative on a fair cost of construction. The past year, poor as it was, with the extraordinary expenses incurred in changing the gauge of our line, and of the rolling stock, and damages occasioned by the accident we have before named, has yielded to us, in neat earnings, a sum that would more than pay six per cent. on all liabilities, including stock, bonds, and unfunded debts.

GENERAL BALANCE SHEET.

Vice President, CHARLES PARRY.

Secretary, SAMUEL HANNAH.

Superintendent, HENRY L. POPE, Dayton, O.

A New Board for Shares of Mining Companies.

A new Board for the purpose of dealing in Stocks of Mining Companies, has recently been formed in this city by electing O. D. Ashley, of Ashley & Norris, as President; Howard Wainwright, of Seyton & Wainright, Vice-President; C. Kowalski, Treasurer, and E. Shipman, Secretary. These gentlemen are all members of the regular Stock Exchange.

Artificial Limbs.

Extraordinary Case of Substitution.—The wonderful perfection to which this art has now arrived, as a matter of common observation, is too well-known to require any special notice in ordinary cases where artificial limbs are applied. Surgery is now brought to such perfection (in cases where limbs have to be amputated, either for disease or the common accidents that are constantly occurring among such a go-ahead people as we are, (that surgeons rarely loose a patient, unless from other causes than the removal of the diseased or mutilated limb,) that this profession of supplying substitutes has become a fixed institution of the day; and we often learn that a friend is thus supplied only by a long acquaintance, or by some little accident, like treading on his toes, or grasping his hand that refuses to give the warmth, or (quite) all the movements of nature. We have just been show a case, where this branch of art really deserves more than an ordinary passing notice. A young man named Morris Force, of Plainfield, N. J., aged 12 years, had his left leg and his left arm severed from his body in August last, by being run over by the cars at that place; by the prompt and skilful treatment of the surgeon, (Dr. Stilman,) his limbs or stumps were entirely healed in less than six weeks from their removal; but he was left perfectly helpless so far as moving about, and had to be carried from place to place until he resorted to the usual remedies in such cases of artificial substitutes; with these he was supplied by a well known artizan, Mr. A. A. Marks, of No. 307 Broadway, in this city, and he now walks erect, and runs without even the aid of a cane, carries a bundle or parcel in either hand, and we venture to say that not one person in a thousand would even venture a thought (without a close scrutiny,) that he was, so far as limbs are concerned, *half artificial*. We have also a case in our own establishment; an employee had his leg amputated seven years since, only a few inches from his body; he has been on crutches until within the last fortnight, but with Mr. Marks' assistance, he is enabled to attend to his business now with the help of a cane only, in traversing the streets, and can walk from two to three miles, experiencing much less fatigue than with his crutches.—*Express.*

Ohio and Mississippi Railroad.

The annual meeting of this company was held on the 4th inst., at their office in Cincinnati. The report of the president and superintendent were presented of which the following is an abstract:

FROM THE PRESIDENTS REPORT.

By reference to the Treasurer's report, you will see that a large amount has been expended in permanent improvements; the most prominent of which is a bridge over Mill Creek, near Cincinnati, referred to in my report of last year. In that report I referred to a proposed arrangement among the creditors and stockholders for capitalization, and I was informed by the chairman of their Trustees that there are now in the trust, under the agreement to capitalize—

Second mortgage bonds	$45,000
Construction bonds	3,905,000
Income bonds	3,221,000
Stock at par	4,490,000
Claims, principally notes	364,000
Past due coupons	1,280,000
Total	$13,305,000

Upon a suit for foreclosure and sale of the road, brought by a large holder of the second mortgage bonds, the Court granted the application for a Receiver, and appointed Jos. W. Alsop as such officer on the 9th of April last, and is now acting in that capacity.

The appointment of the present President of the road abviates the necessity of any material change in its working arrangements.

The business of the past year shows a gratifying increase over that of the previous year, and, with the prospect of abundant crops, the present year bids fair to show as favorable a result.

FROM THE TREASUREE'S REPORT.

Statement of the Liabilities and Assets of the Ohio and Mississippi Railroad Company, April 30, 1860:

LIABILITIES.

Capital stock	$7,584,681	
Less pledged to city of Cincinnati to secure loan of $600,000	$1,000,000	$6,584,681 60

Increase for year			$133,526.84

* Decrease.

FROM THE SUPERINTENDENT'S REPORT.

The following is an abstract of the annual report of the Superintendent for the year just closed.

The gross income of the year has been as follows:

From passengers	$544,801 12
do. freight	403,102 98
do. mail and express	67,580 35
Total	$1,015,484 45

There has been expended for operating the road:

Repairs of track, bridges, and machinery, and renewals and construction	724,937 08
Net earnings	$290,547 37

It is proper to state, remarks the Superintendent, that a very large expense has been incurred, and is included in the amount above stated, which is not fairly chargeable to the regular operation and repairs of the road, of which $12,500 was in making embankments in place of trestlework, $21,625.93 for extra renewals of cross-ties, $2,370 for two new bridges over Beaver Creek, $23,123.23 for one hundred new iron trucks for freight cars, and $9,647.11 for rubber springs, making a total of $69,266.27. This amount being deducted from the total expenditures, gives 64½ per cent. of the gross earnings as the cost of operating the road.

Gross increase for 1859 and 1860	$1,015,484 45
Gross increase for 1858 and 1859	881,957 61
Increase in 1859 and 1860	$133,526 84
Increase on passengers	52,260 45
Increase on freight	80,352 55
Increase on mail and express	813 84

The report concludes:

In closing this statement it is proper to add that there has been, during the past year, a general and decided improvement in the condition of the road-bed, superstructures, machinery, and cars. To this fact, may, to a considerable extent, be attributed the large relative proportion which the operating and general expenses bear to the earnings. These can in future be materially reduced, and at the same time the effective value of the road be fully maintained.

There has been a steady increase in the local business of the road; and there should be better facilities for this traffic afforded at various points; more convenient arrangements at stations should be made, and I would recommend a revision of the local freight and passenger tariff.

After the reading of the reports the following Board of Directors were elected for the ensuing year: Larz Anderson, James Hall, Wm. W. Scarborough, C. D. Coffin, E. Flint, H. C. Lord, Wm. H. Clement, James Torrence, S. W. Pomeroy, Jas. D. Lehmer, James C. Hall, Cincinnati; Theodore Gazlay, Lawrenceburg; Wm. H. Aspinwall, E. Bartlett, S. W. Comstock, F. Schuchardt, E. Delano, Wm. Whitewright, Jr., J. W. Alsop, New York; H. D. Bacon, Louis B. Parsons, St. Louis.

President, J. W. ALSOP.
Vice-President, E. FLINT.
Secretary, SAMUEL TREVOR.
Treasurer, CHARLES S. CONE.

The American Pump.

About a year since, after an examination of the above invention, we gave in our columns a favorable notice of it, since which ample time has been afforded to test its real merits, which we learn has been successfully done in almost every section of the Union. At the beautiful residence upon the site of old Fort Independence, near Kingsbridge, owned by Wm. O. Giles, Esq., (of the house of of Andrews, Giles & Co., 100 Chambers street,) one of these pumps has lately been put in operation. It is set in a reservoir, supplied by two memorable springs. By invitation, on Saturday last, in company with Mr. James M. Edney, we visited the above locality for the purpose of witnessing the operation of this pump. While present, Mr. Edney and Mr. Giles measured the distance from the spring to the house, which was found to be *eight hundred and sixty-two feet*, and the perpendicular elevation was *one hundred and fifty-eight feet*. They then put the pump in operation, and through a three-quater inch pipe, (which was very much against the pump, being too small,) forced over five gallons of water a minute the above distance and height, by two men, by one man, and Mr. Edney worked the pump *alone with one hand*. Mr. Edney has such confidence in the pump that he will guarantee that two men will elevate water two hundred and fifty feet and carry it horizontally, one thousand or more feet. We have no hesitation in pronouncing it one of the most ingenious inventions in the way of hydraulics ever constructed. It can, in all ordinary depths, be worked with the greatest ease by a small boy, and its simplicity, durability, cheapness and adaptation for forcing water up to almost any height, gives it a decided advantage over the majority of other inventions made for this purpose. A man can put it on his shoulder and carry it almost any distance. The public have only to witness the operation of this pump to be convinced that too much cannot be said in commendation of it. Those who have experienced a difficulty in getting water up into high buildings, or to great elevations, or who wish to obtain something of a substantial nature, at a trifling expense, easily worked by hand or power, will find in the American Pump all they need combined, for it discharges at any number of given points, and throws water by hose from 30 to 40 feet by hand. Full drawings and prices will be sent free by addressing James M. Edney, 147 Chambers street, N. Y.—*N. Y. Express.*

Journal of Railroad Law.

FRAUD, RETENTION OF THE POSSESSION OF PERSONAL PROPERTY; EFFECT OF AS EVIDENCE OF FRAUD.

We find a somewhat interesting case reported in the last number of the Pennsylvania reports; in which the Baltimore and Ohio Railroad Company were defendants and one Solomon Hoge was plaintiff. The plaintiff had a judgment against the firm of Pettibone, Hoban & Co. who were contractors upon section No. 163 of the defendants' road situated in the State of Virginia; and in order to collect the same, issued an attachment upon property in the State of Pennsylvania, which he claimed belonged to Pettibone, Hoban & Co., and consequently applicable to the satisfaction of his claim; and which the Baltimore and Ohio Railroad Company claimed as their own property, by virtue of a sale of the property by Pettibone, Hoban & Co. to them.

To substantiate their claim, the defendants put in evidence a written agreement executed the 2d day of September 1852, by which Pettibone, Hoban & Co. agreed to sell, and the defendants agreed to purchase the property in question at a fair valuation, which valuation so far as not determined at the time of making the inventory thereof was to be ascertained by subsequent appraisement in the manner set forth in the agreement. There was no delivery of the property under this contract, but the vendors remained in possession, using and controlling it as before; but a schedule thereof was made out and signed by Pettibone, Hoban & Co., and at the same time, an estimate of its value was signed by Charles P. Manning, the company's agent. On the sixth of September, 1852, Manning paid Henry Pettibone $8,000 for which the following receipt was given:

WHEELING, September 6, 1852.

Received of Charles P. Manning, Esq., engineer of the 6th division of the Baltimore and Ohio Railroad Co. the sum of eight thousand dollars, on account of the purchase money agreed to be paid to Patrick Hoban, William Streater, and myself, for the stock of horses and other property on section No. 163 of the road of said company, under the contract dated 2d Sept. 1852; *and also on account of any balance that may be due to me under my contract for the construction of said section.*

H. PETTIBONE.

Upon the trial of the cause the court charged the jury in reference to this receipt as follows:

"It is for the court to put construction upon all written instruments; but their effect or bearing upon the case, as facts is for a jury. We cannot say that the terms of this receipt are inconsistent with a fair and *bona fide* sale; but still, as the receipt would authorize the application of a part of the same otherwise than to the property attached, it rests with the jury to say with what design."

To this portion of the charge, as well as others, the defendants excepted; and a verdict and judgment having been rendered for the plaintiff for

$361 30, they removed the cause to the Supreme Court. The following is the opinion of the court affirming the judgment of the lower tribunal.

THOMPSON, J. The retained possession of the property by the vendors Pettibone, Hoban & Co., made a *prima facie* case of fraud between them and the vendees so far as creditors were concerned. This is the rule by the laws of Virginia; and that being the *locus contractus*, and also that being the *situs* of the property in question, we are to be governed by it. These facts having been shown, it became necessary for the defendants to rebut the presumption of fraud arising out of the circumstance of retained possession. This they endeavored to do by putting in evidence a written contract of the sale, accompanied by the testimony of witnesses as to the time, mode, and manner of making it, the taking a schedule, and the fixing an approximate estimate of the value of it. This was for the purpose of divesting the transaction of the taint arising from the retained possession by the vendors. In this connection and for the same purpose, they also gave in evidence a receipt for the payment of $8,000 to the vendors, alleging that it was a payment of the property; in which it is stated to be "for the stock of horses and other property on section No. 163 of the road of said company, under the contract of September 2d, 1852, and also on account of any balance that may be due to me under my contract for the construction of said section."

After the defendants closed their case, the plaintiff rebutted and gave evidence tending to show a larger indebtedness on part of the railroad company, to Pettibone, Hoban & Co., for work done, that the sum paid them, for which the receipt was given, and also that the approximate estimate of the property $8,000 was from $1,000 to $4,000 below its actual value; that the possession remained unchanged up to and even after the payment of the money, and until the attachment was served, and proved by one or two witnesses in contradiction of the terms of the contract, that the possession of the horses, the property attached, was not to be delivered to the defendants, until their value was ascertained in the manner provided for in the agreement, and that it had never been so ascertained. In conclusion, the plaintiff claimed, that the form of the receipt was evidence on the question of fraud for him; that it served to show that, although by the terms of the contract it was agreed that the horses were delivered, yet that, as between the parties this was not the true state of the case, but that the sale was only conditional, as testified to by witnesses and corroborated by the other facts in the case, and especially the retention of the possession by the vendors, and their contracting for their pasturage after the payment of the money was made in whole or in part on the indebtedness for the work done, and that if there was fraud in this assumption of payment on the price of the horses, it might be considered by the jury, as a circumstance, evincive of fraud in the origin of the alleged sale. We think it was a circumstance to be considered by the jury. The sale was a secret in the neighborhood of the work, and everywhere else, for what we know. It was dated on the 2d September, 1852. The property was used and cared for in the same way, by the same owners, up to the 10th of September, although it was alleged to have been sold and paid for; and on that day it was removed from the work by the same parties, under a contract for pasturage to be paid for by them for an indefinite period. Farmers and millers furnished provisions to their men as contractors, and feed for their cattle without any knowledge of a sale or relinquishment of the railroad contract by them; and it would seem that part, at least, if not all, of the plaintiff's claim was for flour and feed furnished after the sale, and some of it after the alleged payment of the money, in entire ignorance of what had taken place. To hold under such circumstances, that the receipt was to have no influence or bearing, in determining whether the payment was not on different consideration from that assumed by the defendants, and that it was made to operate as a cover of a mere conditional sale, and that nothing in fact, so far as the horses were concerned, had passed by, the contract would be to exclude what no rule would justify, either at the present or in any former state of the law in cases of fraud.

Fraudulent receipts for payment have always been circumstances in testing the covinous design in the original transaction. This was the rule invoked here, and whether the matter turned out to be fair or false, the jury had a right to consider the aspect claimed by the plaintiff upon the evidence in the case.

It is a great error, generally insisted on by defendants, in cases involving questions of fraud, that each item of testimony is to be tested by its own individual intrinsic force, without reference to anything else in the case; and, if on such a test it does not prove fraud, it must be excluded. The system of destroying in detail, forces designed for concentrated action, does well, doubtless, in military operation; but a skilful general never suffers such a disastrous result, except when he cannot prevent it; courts have the power and must prevent such a system of assault, otherwise fraud would ever be victorious. It is a subtle element, and is to be traced out, if at all, by the small indices discoverable by the wayside where it travels; and to enable courts and juries to detect it, they must, in most cases, aggregate many small items, before the true features of it are discoverable. Hence it is, that great latitude in the investigation, is a rule never departed from in such cases. This rule is elementary, and a citation of authorities to prove it, would not only be useless but superfluous. In these views we are expressing no opinion on the question of the existence of fraud in this case, but simply justifying the learned judge in the views he expressed in regard to the receipt in question, and we see no error in them.

The 3rd and 4th assignments of error are substantially the same thing. They are based upon the refusal of the court below to charge that the evidence on part of the plaintiff was trivial and not sufficient to establish a case of fraud, in the transaction between the defendants and the vendors of the horses, and creditors. The court could not, without palpable error, have so charged. The retained possession of the property by the vendors was *prima facie* fraudulent, by the law of the place of the contract. This was claimed to be rebutted by the evidence on part of the defendants, consisting of matters of fact exclusively. Who was to judge of the truth and efficiency of the evidence to overturn the *prima facie* case of fraud, but the jury? The facts relied on as having this effect, were not admitted facts, but disputed most earnestly by the plaintiff. The jury must, therefore, necessarily pass on this part of the case. The court could not. But the defendant had a case, on evidence that, he claimed, answered the defendants' evidence, and confirmed the fact of fraud. There were many facts including those already mentioned and others, tending to show the transaction colorable, as he claimed, and which no court could say, were not so. They were, therefore, in their effect on the case, clearly within the legitimate province of the jury to pass upon. There is a class of cases in which the rules in regard to the submission of facts to the exclusive action of the jury seems properly to be more restricted than formerly—cases of trust—parol sales of land—contracts between children and parents for compensation for services, and the like. In these and other cases of the kind, it has been held to be the duty of courts, not to submit evidence, insufficient, even if true, on which to found a recovery. But this is not one of that class or kindred class of cases. Here the jury are not only to judge of the truth of the evidence, but of its sufficiency to satisfy their minds. They are not only to find the facts, but the inferences fairly deducible from them. I do not say in such a case, that if there was but a spark of evidence, so insufficient in the mind of the judge that he would feel bound to grant a new trial, if it were made a basis of a recovery, that he would err in withdrawing it from the jury. But in cases like the present, such a power should be exercise with great caution. We are clear in this case, that the court below was right in refusing to charge as requested, and in submitting the evidence to the jury.

Canadian Canal Tolls.

The following are the new regulations for the payment of tolls on the Canadian Canals, which we publish for the benefit of vessel owners and others. It is provided that: Through all, each and every of the following canals, locks and several sections thereof, viz:

The St. Lawrence Canal; the Rideau, Catilion and Greenville Canals; the St. Anne's lock, and the Burlington Bay Canal, vessels and goods shall pass toll free, up or down, whether such vessels be American or Canadian, both of which will be entitled to the same exemption, on their conforming to such regulations and orders as may be from time to time, made by the department of the Minister of Finance in reference to the passage through all or any of the above mentioned canals or locks.

That with regard to the Welland Canal, all vessels and goods going through or using that canal, shall continue to pay the tolls at the rates charged by the existing tariff—but, of the tolls so paid, 90 per cent. shall be refunded whenever the vessel and goods that shall have so paid toll on the Welland Canal, shall enter the St. Lawrence Canals, or report inwards, and enter the goods at any Canadian port on Lake Ontario or on the St. Lawrence.

The vessels and goods passing through the Welland Canal and entering at a Canadian port, before they shall be considered as entitled to be refunded the 90 per cent. on the Welland Canal tolls, shall make such declaration and execute such bonds as the proper department may require, that the goods landed at such Canadian ports are *bona fide* intended, and landed for consumption in Canada, or to be shipped via the St. Lawrence, and the owners and masters of such vessels shall otherwise conform to such regulations as may be con-

sidered necessary and be established to prevent any evasion of the conditions upon which such 90 per cent. of the tolls is to be refunded.

That vessels and cargoes passing upwards through the Welland Canal shall be treated in the same manner as vessels and goods passing downwards, that is to say: that such vessels and cargoes if hailing from a Canadian port, or which shall have come up through the St. Lawrence Canal, shall be charged ten per cent. only of the rates of toll authorized by the present tariff, upon the master of such vessel producing such evidence of his having come through the St. Lawrence Canal, or of his hailing from a Canadian port, as may be required by the proper officer at the Welland Canal. —*Buffalo Com. Adv.*

New York Canals.

Tolls received on all the Canals of this State in April, 1859	$69,879 46
Do. do. 1860	49,763 15
Decrease in April, 1860	$20,116 32
Tolls received on all the Canals of the State in May, 1860	$359.806 19
Do. do. 1859	203,536 78
Increase in May, 1860, over May, 1859	$156,269 41
Whole amount of Tolls received from the opening of navigation in April to the end of May, 1860	$409,569 33
Do. do. 1859	273,416 24
Net increase during the season	$136,154 09
Amount of Tolls received at the Buffalo office from the opening of navigation to June 1, 1860	$149,199 69
Do. do. at the Oswego office	63,149 48
Tolls received on Champlain Canal to June 1, 1860	$21,953 55
Do. do. to June, 1859	21,864 50
Excess in 1860	$0,089 05
Total receipts at the three tide-water offices from the opening of navigation to June 1, 1860	$54,078 16

The Tolls received on all the Canals of the State from the opening of navigation to June 1st, in ten years, have been:—

1860	$409,569
1859	273,415
1858	354,285
1857	217,343
1856	242,131
1855	398,166
1854	503,162
1853	593,561
1852	545,200
1851	773,330

Railroads and Telegraph Lines in the Island of Cuba.

Alluding to the railroads already finished, and those in course of construction, the Havanna *Messenger* remarks:

"Our readers abroad may be able to form an idea of the progress of our Island by our merely mentioning the fact that the different railroads now finished and in the course of construction throughout the country, are *twenty-seven* in number, and comprise altogether 13,315,522 kilometers, (about 818 English miles,) of which at least 500 miles are in full operation. The whole amount thus far invested on these railroad lines, up to last year, was $17,027,414.66; and according to the statistics published, they yielded in 1858 the sum of $3,386,840. The principal line—the first ever constructed (from this city to Guines, and now extending to La Union,) was commenced in November, 1835; the line from Cardenas to Macagua was started in 1838, and the Jucaro Railroad in 1839. All the others have been traced and commenced since 1840. The establishment of the magnetic telegraph in this Island keeps pace with all other improvements, and we now have a continued line, divided into three sections, making in all a full distance of 510½ kilometers. The first section comprises 12 stations, the second five.

Mobile and Ohio Railroad.

Tazewell County Bonds.

The late decision in the Peoria Circuit Court of Illinois is attracting much notice, as affecting the validity of county, city and town bonds of that State, issued under the general law of November, 1849. This law of 1849 authorizes counties, cities and towns to issue their bonds for any amount not exceeding $100,000 each, bearing interest not exceeding ten per cent., but is silent about the place of payment of principal or interest. Under this law many corporate bonds in aid of railroads have been issued, and sold in good faith, payable in New York, and their validity has not been questioned until very lately.

In 1853, Tazewell County, Illinois, voted $25,000 in aid of the Peoria and Oquawka Railroad Company, payable in New York. In 1858 the company tendered their stock and demanded the bonds to be issued and delivered. The county refused, and the company then applied to the Supreme Court for a mandamus to compel Tazewell County to issue the bonds. In defense, the officers of the company, among other things, set up that the vote to make the bonds payable in New York was unauthorized by law, and that therefore the county could not be compelled to issue them. The Supreme Court of Illinois sustained this objection, and denied the mandamus. The court also went further and decided that all bonds, whose principal or interest was made payable elsewhere than at the treasury of the corporation issuing them, were illegal, and their payment could not be enforced.

The Peoria Circuit Court, in December, 1859, in a suit brought by Johnson, to recover interest on $50,000 of Stark County bonds, payable in New York, issued in aid of the "Western Air Line Railroad Company," following the decision of the Supreme Court in said mandamus case, decided against the plaintiff on the single point that the interest was payable in New York, and that in issuing them the officers of Stark County violated the law of 1849, above referred to. The gist of the mandamus case, it will be seen, was against compelling Tazewell County to issue bonds, and not against the validity of bonds already issued. And the opinion of the judge making that decision, so far as it relates to the validity of bonds issued under the law of 1849, which were payable at New York, was a mere *obiter dictum*. Another point was made in the mandamus case, upon which the court laid much stress, to wit, that under the law of 1854, amending the law of 1849, the officers of the county have a large discretion, and may issue the "whole or any part of the bonds" voted by the county, and as the railroad company demanded the whole amount, the officers had a right to resist the demand.

The Peoria Circuit Court, however, covers the broad ground that all bonds issued under the general law of 1849, payable elsewhere than in the particular county, were illegal, and is, in fact, based upon the mere *obiter dictum* of the Supreme Court in said mandamus.

Besides, by a law of Illinois of February 16, 1857, it is provided, "that it shall be lawful for any person or corporation, borrowing money in the State, to make notes, bonds, bills, drafts, acceptances, mortgages or other securities for the payment of principal or interest, at the rates authorized by the laws of this State, payable at any place where the parties may agree."

This law covers all bonds issued since February 16, 1857. And it will be seen that the mandamus case upon which the Peoria Circuit Court based its decision, arose upon a vote to issue bonds taken in 1853. Whether the Stark County bonds were issued since February 16, 1857, does not appear, and it is worthy of remark that the Peoria Circuit Court in its decision makes no reference to this law of February 16, 1857, which justifies the inference that these Stark County bonds were issued prior to that date.

The opinions of some of the best lawyers of Illinois sustain the validity of all these bonds issued in good faith under the law of 1849. No State is more prosperous than Illinois. Her whole debt is

only about nine millions of dollars, ($9,000,000,) and this, by her sinking fund, will all be liquidated in six or eight years. Repudiation is strongly repugnant to the people of that State, and it is believed that the Supreme Court, on appeal, will reverse this decision in the Peoria Circuit Court, thus effectually setting at rest all doubts as to the validity of the county bonds now held so largely by Eastern capitalists.

Locomotive Car.

The following is a description of a locomotive and car combined now being constructed for the Pittsburg, Fort Wayne and Chicago Railroad Company. It is designed for local traffic on short distances.

The car contains seats for 100 passengers, and room for about three tons of baggage. The weight of the car and engine, without load, is 13½ tons. One cord of wood is used in running 125 miles, and the whole expense of running, including the payment of all the men employed on the car and engine, is less than one-third of the expense, per mile, of an ordinary train of the same capacity. The locomotive car will make the speed now adopted by the railroads of this country either on express or accommodation trains, and will pass easily over any grade where the locomotive engine can be used.

It is manifest that the wear and tear of the iron and track will be very small with the locomotive car, as compared with the ordinary train; the first weighing in no case, over 13½ tons, and the last from 75 to 80 tons. So that the cost of running is not only very much less, but the cost of repairs and renewals of iron is decreased in the same degree. The additional weight on the drivers is in proportion to the load, each passenger and each trunk adding directly to it. It will also be seen that the momentum of a train of this weight (13½ tons) will be small compared with a train of 75 or 80 tons; and that, as a consequence, the locomotive car can be brought to a stop quicker, and hence is safer. It is also demonstrable that, as there are fewer number of parts about this machine, it is much less liable to accident, or to get out of repair than the machinery as now constructed.

The patentees say that they are prepared to execute orders for the construction of the locomotive iron car on any scale required. In order that there may be no risk run by those Companies who desire to avail themselves of the economical results arising from the use of it, the inventors will guarantee that it shall not cost to exceed 15 cents per mile to run it, and will make a large proportion of the payments dependent on the guarantee. While they will guarantee that the cost per mile shall not be over the figures stated, they have no hesitation in saying that the actual cost per mile, on each run of 100 miles, or over, per day, will not be over 10 cents per mile run.

Continuation of the Grand Trunk Railway to the Pacific.

Messrs. Beachell, confidential and financial agent of the Grand Trunk Railway Company, and Bell, President of the Prescott and Ottawa (Canada) Railroad Company, visited Menasha and Neenah recently, for the purpose of informing themselves in regard to the commerce, manufacturing and business of Lake Winnebago, Wolf and Fox River countries, with a view of finding a route across Northern Wisconsin to push the Grand Trunk road to the Pacific. The Colonial surveyors have decided that the route north of Lake Superior is impracticable, and they have resolved to adopt the route across Northern Michigan to Pere Marquette, and from Manitowoc to St. Paul, thence through the British possessions to the Pacific. They express themselves highly gratified with the prospects of the proposed route, and agreeably surprised with this portion of the State, its excellent soil, commercial and manufacturing advantages, and the important business and other facilities it offers this great project.—*Milwaukee Free Democrat.*

Grand Trunk Railway.

The sixth annual meeting of the stockholders was held at Montreal on the 30th ult. A report was made by which it appears that for the half year ending December 31st, the

Total receipts were	$1,376,970
" Expenditures	1,121,518
Balance to credit of revenue	$ 255,452

In the locomotive department for the same period a saving in the train mileage of $11,268, and in the car mileage of $9,121 had been effected, whilst the condition and capacity of the rolling stock had been fully kept up.

The report further states that since the last meeting of the shareholders, held in London, March 30th, 1860, at which the terms provisionally agreed upon for the lease of the C. D. & C. G. T. J. Railway were announced, it had been found necessary to modify those terms by securing to the leasing Company a rent at the rate of 8 per cent. per annum on the share capital for a limited period, after which the rent will be 6 per cent. with a contingent increase up to 8 per cent. as originally proposed.

The President, Hon. John Ross, in moving for the adoption of the report; said that it was true that since the meeting of the shareholders in London the traffic of the railway had largely increased, and he had no doubt but the receipts would reach $100,000 per week within the next twelve months, if the country were blessed with an abundant harvest, of which there is now every promise. There must be some temporary falling off in the traffic for three or four months during the months of May and June; but the increase would then show what the line could really do, and he believed would soon realize the full expectations of those who had invested in the enterprise.

The report was then adopted.

At a special meeting held later in the day, it was determined to increase the capital by raising by bonds or shares, the sum of £1,500,000 sterling. It was also

Resolved, That the agreement now produced, for a lease of the Chicago, Detroit and Canada Grand Trunk Junction Railway Company to the Grand Trunk Railway Company of Canada for the term of 999 years be, and the same is hereby approved, and that a lease of the undertaking be accepted by this company so soon as the Chicago, Detroit and Grand Trunk Junction Railroad Company have obtained the needful Parliamentary authority to grant the same, and that the Directors take all needful steps and affix the seal of the company to all necessary deeds for the purpose of carrying out the arrangement.—*Detroit Tribune.*

California Indebtedness.

As much interest attaches to the law passed during the last moments of the late Legislature, authorizing the funding of the floating indebtedness of the State, providing the popular vote at the next State election shall sanction such a method of disposing of this indebtedness, it may not be improper to recapitulate briefly the leading features of the act, which has just gained publicity. The law provides that the Secretary of the Treasury shall prepare suitable bonds of the State, not to exceed $200,000, bearing interest at the rate of 7 per cent. per annum from date of issue, payable at the office of the State Treasurer on the 1st day of Jan. 1880—the interest, on and after Jan. 1, 1862, being payable semi-annually on the 1st of January and July, at the office of said State Treasurer. For the creation of a fund to meet the bonds and the interest accruing thereon, an annual tax of 1¼c. on every hundred dollars of the assessed value of real and personal property is to be levied. Also, all moneys that may be received from the United States Government on account of the "Civil Fund," so called, are pledged for a like purpose

When a surplus of $10,000 has accrued over and above the payment of interest, at any time, public notice is to be given of the readiness of the Treasurer to redeem that amount of bonds at a rate not to exceed par. The claims subject to funding are: 1st, Civil bonds issued under the Funding acts of 1851, '52; '53; '54; '55 and '56, which are now outstanding, with interest on the same; 2d, Controller's warrants drawn under sanction of law, for civil expenses, prior to January 1, 1857, now outstanding and upaid; and 3d, Just or legal claims against the State, accrued prior to January 1, 1857, and which have been or may be allowed and audited by act of Legislature. The claims thus specified may be submitted for funding prior to January 1, 1862, but not afterward, and all claims not presented by that time shall be for ever debarred. This act, if approved by the people, shall take effect January 1, 1861.—*Shipping List.*

Railroad Earnings.

The earnings of the New York Central Railroad for eight months have been as follows:

	1859-'60.	1858-'9.
October	$720,202	$657,727
November	652,406	595,213
December	520,396	506,406
January	387,128	382,516
February	402,530	372,224
March	554,339	512,699
April	580,131	486,697
May	534,329	412,665
Total	$4,351,461	$3,926,147
Increase two-thirds fiscal year		$425,314

The increase is equal to 1¾ per cent. on the capital stock.

The gross earnings of the Panama Railroad for the month of May, 1860, were as follows:

Passengers	$73,677 75
Freight, merchandise	34,535 47
Freight, treasure	10,835 22
Mails	8,333 33
Total	$127,381 77

The Milwaukee and Mississippi earnings for May, 1860, were on

Passengers	$14,851
Freight	41,620
Mails	2,937
Total	$59,408
May, 1859	59,312
Increase	$96

The receipts of the Harlem Railroad for the month of May were as follows:

1859	$91,868 62
1860	89,577 81
Decrease	$2,290 81

This apparent decrease results from the charges for two months of connecting roads being deducted at this time instead of one. The business of the month itself shows a gain over last year o $827 69. The receipts and expenses for the first eight months of the fiscal year (Oct. to June), were

	8 mos. ending May 31, 1859.	8 mos. ending May 31, 1860.
Receipts	$698,556 66	$739,514 44
Expenses	480,006 71	461,783 18
Net profit	$218,549 95	$277,734 26

Showing an increase in receipts of $40,960 78, and a decrease of expenses of $18,223 53, making a net improvement in eight months of $59,184 41. Extensive repairs have at the same time been made in the track and rolling stock, both of which are now in good order. Every train upon the road is now run with coal burning engines. The saving in fuel in consequence of the reduction of the mileage and the use of coal has been very great. In 1854-5, the item of coal amounted to $129,349; in 1855-6, to $130,961; in 1859, to $61,155, and for the present year it will not exceed

$55,000—showing a saving in this item alone of $75,000 over previous years.

The statement of the Illinois Central Railroad Company for May, 1860, is as follows:

Land Department.

2,994.57 acres sold for $44,790.		
12,320.28 " " since Jan. 1.	$193,805	91
1,237,260.55 " " previously	15,735,837	02
1,249,580.78 " " Total	$15,929,642	93
Bonds canceled in May	$38,000	00
" " previously	1,615,000	00
Total Bonds canceled up to May 31, 1860	$1,653,000	00
Cash receipts in May, 1860	$56,066	21
Total cash and bonds received to May 31, 1860	$3,529,000	25

Traffic Department.

Receipts from passengers	$69,712	37
Do. freight	181,759	05
Do. mails	6,858	33
Do. rent of road	5,500	00
Do. other sources	3,372	77
Total receipts for May, 1860	$217,202	52
Do. do. 1859	141,680	35
Increase	$75,522	17
Total receipts since Jan. 1, 1860	$996,027	57
Do. correspond'g period,'59	711,600	03
Increase	$284,427	54

The earnings of the Dayton and Michigan Railroad for May were as follows:

Passengers	$10,478 70
Freight	19,047 39
Mails and express	2,602 22
Total	$32,128 31

This aggregate is some three or four thousand dollars more than the earnings of April.

The receipts of the Indianapolis and Cincinnati road during the month of May were as follows, compared with the same month last year:

	1860.	1859.
Passengers	$14,100 00	$12,808 00
Freight	59,816 04	15,285 00
Mail and express	1,465 00	1,425 00
Total	$35,381 04	$29,518 00

The increase over last year, as shown by these figures, amounts to $5,863 04.

The earnings of the Michigan Southern Railroad for May, 1860 were $179,997 75
May, 1859 138,084 14
Increase $41,913 61

The following is an approximate statement of the Pittsburg, Fort Wayne and Chicago Railroad Company during the month of May, compared with the same period of last year, viz:

	1860.	1859.
From freight	$98,560 66	$54,374 96
" passengers	71,448 67	67,870 16

" miscellaneous		197 67
Total	$187,617 66	$138,567 85
Increase		$49,049 81
Earnings Jan. 1 to June 1, 1860	$855,003 48	
Do. do. 1859	695,747 97	
Increase	$159,255 51	

The Macon and Western receipts for May were:

1860	$23,119 53
1859	21,810 36
Increase	$1,309 17

The earnings of the Housatonic Railroad Company in the month of May, 1860, foot up $26,642 43
May, 1859 24,019 53
Showing an increase of $2,622 90

The receipts of the Grand Trunk Railway of Canada for the week ending May 26, were $56,845 27
Week ending May 28, 1859 41,833 83
Increase $15,011 44
Total traffic from July 1st, 1859 $2,636,500 53
Same period last year 2,071,814 17
Increase $564,686 36

The following are the earnings of the New York and New Haven Railroad for May, 1860:

Receipts from passengers	$90,911 23
Receipts from freight, estimated	15,500 00
Total	$106,411 23
Less due other roads	28,763 86
Net receipts	$77,647 37
Receipts in May, 1859	77,446 63
Increase	$200 69

The traffic of the Great Western Railway of Canada for the week ending June 1, 1860, was as follows:

Passengers	$17,022 82
Freight and live stock	12,342 93
Mails and sundries	1,197 63
Total	$30,563 39
Corresponding week last year	31,707 71
Decrease	$1,144 32

The operations of the Cleveland and Mahoning Railroad Company for May were as follows:

	1859.	1860.
Gross earnings	$16,707 82	$26,088 94
Expenses	7,801 15	10,737 30
Net earnings	$8,906 67	$15,351 64
Increase in 1860		$6,444 97

The earnings of the Macon and Western road for May were:

1860	$23,119 53
1859	21,810 36
Increase	$1,309 17

The receipts of the Grand Trunk Railway of Canada, for the week ending June 2nd, 1860, were $63,378 16
Corresponding week, 1859 40,386 61
Increase $22,991 55
Total traffic from July 1, 1859 $2,699,878 70
Do. for same period last y.. 2,112,200 78
Increase $587,677 92

The earnings of the Hannibal and St. Joseph Railroad for May were:

Passengers	$52,331 82
Freight	48,678 42
Miscellaneous	3,840 06
	$104,849 70

The earnings of the Chicago and Northwestern Railroad for May were:

Passengers, Mails and express	$25,451 03
Freight	36,676 95
Total	$62,127 98
Same month last year	27,882 28
Increase	$34,245 70

The following are the approximate earnings of the Eastern Division of the Ohio and Mississippi Railroad for the month of May, compared with the same period last year:

	1860.	1859.
Passengers	$44,869 75	$44,460 46
Freight	22,960 21	23,954 09
Express	1,850 31	1,771 90
Mail	3,850 00	3,766 67
	$73,530 27	$73,953 12

The total decrease is $422.85, which is almost entirely on the passenger traffic. The diversions of the through business by the Terre Haute and Alton route, accounts for the falling off in the passenger earnings.

The earnings of the Central Railroad Company of New Jersey, for the months of May, 1860, were $109,453 39
Same month last year 84,191 06
Increase, 30 per cent. $25,262 33

The earnings of the Norwich and Worcester Railroad for May, 1859 and 1860, were:

	1859.	1860.
Passengers	$10,166 05	$9,656 84
Freight	17,462 88	20,383 95
Total	$27,618 88	$30,040 79
Gain over 1859		$2,411 91

The earnings of the Michigan Central Railroad for May were $158,599 98
May, 1859 127,145 77
Increase $31,364 21

The earnings of the Stonington Road for the fiscal year, thus far, have been $175,378 80
Previous year. 162,165 73
Increase, 1859-60 $13,213 07

The following are the earnings of the Great Western Railway for the week ending June 9th, 1860:

Passengers	$17,826 65
Freight and live stock	10,723 18
Mails and sundries	1,298 06
Total	$29,847 90
Corresponding week of last year	31,569 83
Decrease	$1,720 93

The following is a comparative statement of the earnings of the La Crosse and Milwaukee Railroad for May, 1859 and 1860:

	1859.	1860.
Freight	$23,865 83	$44,158 88
Passengers	21,973 28	22,782 07
Mails & miscellaneous.	1,011 20	2,682 52
Total	$46,850 31	$69,623 47
Increase for May, 1860		$22,773 16

American Railroad Journal.

Saturday, June 16, 1860.

New York and Erie Railroad.

A decree of sale of this road under the 5th mortgage, in pursuance of the plan of re-organization, has been obtained. There appears to be no obstacle to its being carried out. The Second mortgage bonds are still unadjusted, but no serious trouble is anticipated from the action of their holders. These bonds are worth nearly par. If they could be converted into 3d, which in this case would become Second mortgage bonds, the latter, we are confident, would command a premium. Is there not some way of bridging over the space between these two securities, and save the company from any loss by the process?

Railroads in Minnesota.

The two railroads that had made the most progress in this State, the Minnesota and Pacific and the Transit, are about to be sold on behalf of the State for non-compliance with the conditions annexed to the grants of land made them.

This is an unfortunate termination of the railroad enterprises in this State, but if it was inevitable, it is well that it came at an early day. We take it that the sales of the rights of the present companies will not, of necessity, defeat the construction of the roads altogether. Some new and better plan will be devised to render available the really valuable grants of lands made to the State for the construction of public works, which will ensure their construction as fast as they may be needed, or as fast as the means therefor can be furnished.

The State made a double mistake when she undertook to aid the railroads. The system proposed was entirely too large, while its credit proposed to be extended was upon such conditions as rendered it entirely unavailable. It simply encouraged the railroad companies on to their own destruction. At no time since their issue, could

the State bonds be sold at any price, for the very good reason that no adequate provision was made for the payment of their interest. Had this been done, the two roads, instead of being brought to the hammer, would at this time have been in active operation.

Alarm Whistle Indicators.

The SPEAKING PIPE is fast coming into general use. Scarcely a building has been constructed of late years without the insertion of one or more of them therein. For hotels, factories, store houses, offices, etc., they are indispensable; and no private dwelling can be said to have *all* the "modern improvements" unless the SPEAKING PIPE has been also included. They are far preferable to bells, which require to be answered in person; whereas a query propounded through the pipe can be replied to immediately through the same channel. The great difficulty heretofore has been to make the voice heard beyond a certain limit, and often a bell was required in connection with the pipe to call attention to it. Now, however, since the introduction of the ALARM WHISTLE, the necessity for the bell is entirely precluded, as the whistle can be heard to the most remote corner of the largest room. We give elsewhere the advertisement of the manufacturer, accompanied by a representation of the entire apparatus. They are usually affixed to both ends of the pipe. The whistle is within the box, held firmly against the inner edge of the mouth-piece by a spring attached to the lower end of the crank, of which a view is given. In using, the crank should be turned back by the thumb, carrying with it the whistle, the alarm is then sounded by blowing (through the pipe) the whistle at the other end. In conversation, both ends require to be open. We have them in use both in our offices and at home, and of all the modern improvements, we find this the most useful.

Marietta and Cincinnati Railroad.

The trustees for the bondholders of this road, consisting of Messrs. Noah L. Wilson, Wm. F. Roelofson, E. W. Fernie, David Gibson, Thomas W. Powell and J. J. Heseltine, took formal possession of this road on the 8th inst. Mr. Wilson was elected Chairman, and Mr. Roelofson Secretary. Orland Smith, Esq., the late Receiver, has been appointed Agent and Superintendent. He immediately issued a circular to the *employees* under the previous organization, continuing each in his position, at the same salary, until further orders.

Lexington and Southern Kentucky R. R.

This new company has been organized by the election of CHARLES CALDWELL, President, *pro tem.*, WM. J. MOBERLY, Secretary, and A. G. GOWER, Superintendent and Engineer. The early completion of the road to the Kentucky river, to which point it is already graded from Nicholasville, will insure its rapid construction to Danville via Harrodsburg.

Bethlehem Rolling Mills.

At the last session of the Pennsylvania Legislature a supplement to a law of 1857 was passed, incorporating "The Bethlehem Rolling Mill and Iron Company," to be located at Bethlehem. Within a few days a subscription to the stock was opened, and has already been filled by capitalists in that region and in Philadelphia, to within some twenty thousand dollars of the required amount.

Kentucky Central Railroad.

A meeting of the directors of this road was held at Danville, Ky., on the 6th, where they were met by a committee of citizens of Boyle and adjoining counties, for the purpose of discussing the question of an extension of road. No definite action was taken, but a comparison of views and propositions gave much confidence in the ultimate completion of the work.

It is understood that a number of the citizens of Danville, have determined to take stock in the road, and active measures will be taken to raise the amount required for its completion.

New York Machinery Depot.

In another column will be found the advertisement of Messrs. STEVENS, BROTHER & Co., of their establishment at 222 Pearl street, New York, at which they have an extensive assortment of machinery of all kinds, embracing Stationary and Portable Steam Engines, Lathes, Planes, Drills, Belting, Woodworth's Planing Machines. Also Dick's Celebrated Anti-Friction Shears, Presses and Punches. Dick's Press enjoys the reputation of being the most convenient, easily handled and powerful presses ever constructed, and is rapidly superseding all other kinds. It has only to be seen to carry conviction as to its value. At the Messrs. STEVENS establishment, railroad companies and parties wanting machinery of any kind can be promptly supplied.

☞ We invite attention to the Advertisement in another column of R. T. EDWARDS, Esq., by reference to which it will be seen that he has for sale *Wrought Iron* and *Cast Iron Pipe*, and connections for Steam, Gas and Water purposes. Also Tools of every description connected with the trade. Lightning Rods and Fixtures of all the various kinds, constantly on hand at manufacturers prices. Address R. T. Edwards, Esq., 261 Pearl St., New York.

Mississippi and Missouri Railroad.

This Company held its annual meeting in Davenport, on the 4th. The officers elected were:

President—Hon. J. A. Dix, of New York.
Treasurer—F. H. Tows, of New York.
Secretary—Hiram Price, of Davenport.

The old Board of Directors was elected, and Hon. J. B. Grinnell, of Grinnell, Iowa, was added to the Board, which embraces Hon. N. B. Judd and W. B. Ogden, of Chicago.

This road is now progressing westward, through the energy of Mr. Durant, of New York, the contractor, who will soon have thirty miles of track laid west of Iowa City.

Peoria and Bureau Valley Railroad.

The stockholders of the Peoria and Bureau Valley Railroad Company held their annual meeting on the 8th inst., and elected the following directors for the ensuing year:—N. B. Judd, H. Farnham, Chicago; T. C. Durant, Clark Durant, New York City; John Hamlin, Peoria; F. Tows, New York City. Hon. N. B. Judd, of Chicago, was re-elected President, and all the o'd officers were also re-elected.

Sunbury and Erie Railroad.

It is understood that the Sunbury and Erie Railroad Company will run their own road from Sunbury to Wheatm, a distance of eighty-three miles, on and after the first day of July next, when they will have one hundred and forty-nine miles in operation.

Lake Ontario and Hudson River Railroad.

The Lake Ontario and Hudson River Railroad was sold in the village of Saratoga, on the 11th inst., by a decree of the Court, on foreclosure, for $5,000. The purchase includes the road-bed from Greenfield, in Saratoga County, to Sacketts' Harbor, with the franchise and charter. The referee will proceed to sell the lands belonging to the company, aside from their road-bed, forthwith. We presume that a new company will be immediately organized on the ruins of the old. The expenditures that have been made on the line of this road, which are considerable, will enure to the benefit of the new parties.

Pilot Knob, Cape Girardeau and Belmont Railroad.

The people of Cape Girardeau are agitating the question of extending the Iron Mountain Railroad from Pilot Knob through Cape Girardeau to Belmont, opposite Columbus, Ky., there to unite with the Mobile and Ohio road, and, through it, with the entire scheme of Southern roads. They are heartily seconded by the citizens of Columbus, and we observe that a Convention of the friends of the project is called to meet at Cape Girardeau on the 27th of June.—*St. Louis News.*

Hudson River Railroad.

At an election for directors of this road held on the 11th inst., the following gentlemen were chosen: Samuel Sloan, James Boorman, John David Wolfe, Edward Jones, William Kelly, D. Thomas Vail, Erastus Corning, Wm. H. Hays, Robert P. Getty, Henry A. Smythe, J. B. Johnston, E. H. Miller, Moses H. Grinnell. At a subsequent meeting, Samuel Sloan was re-elected President and D. Thomas Vail, Vice-President.

Terre Haute, Alton and St. Louis Railroad.

At a recent meeting of the stockholders of this road, held at Mattoon, Ill., the following Board of Directors were elected: Wm. D. Griswold, Terre Haute, Ind.; Robert Smith, Nathaniel Hanson, Alton, Ill.; Anthony Thornton, Shelbyville, Ill.; R. B. Sutherland, Dudley, Ill.; T. A. Marshall, Charleston, Ill.; J. P. Usher, Terre Haute, Ind.; John Stryker, Rome, N. Y.; Chas. Butler, New York City; Willis Phelps, James Barnes, C. Rice, Springfield, Mass.; L. P. Sanger, St. Louis.

New York Central Railroad.

The earnings of this road for 8 months of the present fiscal year, are $4,351,461 against 3,926,147 for 1859, showing an increase of $425,314 The rate of increase has been about 11 per cent. A similar rate for the year would give a total increase of about $700,000, which is equal to nearly 3 per cent. on the capital stock of the company. The rapid recovery in the earnings of the road would seem to render certain the continuance of fair dividends. The rate paid the past year was 7 per cent.—the amount being $1,679,782. The total earnings of the present year will be about $7,000,000.

Galena and Chicago Railroad.

The following gentlemen have been elected directors of this road, viz: W. L. Newberry, W. H. Brown, John Wentworth, O. Lunt, F. Mosely, J. McCord, Jonathan Burr, F. K. Rogers, Chicago; Wm. Larned, New York City; D. A. Knowlton, Westfield, N. Y.; W. H. Ferry, Utica, N. Y.. Thos. Robinson, Rockford, Ill.; Charles S. Hempstead, Galena, Ill. The Board of Directors subsequently met, and re-elected W. L. NEWBERRY, President and W. H. BROWN, Vice-President.

American Railroad Journal.

Saturday, June 16, 1860.

New York and Erie Railroad.

A decree of sale of this road under the 5th mortgage, in pursuance of the plan of re-organization, has been obtained. There appears to be no obstacle to its being carried out. The Second mortgage bonds are still unadjusted, but no serious trouble is anticipated from the action of their holders. These bonds are worth nearly par. If they could be converted into 3d, which in this case would become Second mortgage bonds, the latter, we are confident, would command a premium. Is there not some way of bridging over the space between these two securities, and save the company from any loss by the process?

Railroads in Minnesota.

The two railroads that had made the most progress in this State, the Minnesota and Pacific and the Transit, are about to be sold on behalf of the State for non-compliance with the conditions annexed to the grants of land made them.

This is an unfortunate termination of the railroad enterprises in this State, but if it was inevitable, it is well that it came at an early day. We take it that the sales of the rights of the present companies will not, of necessity, defeat the construction of the roads altogether. Some new and better plan will be devised to render available the really valuable grants of lands made to the State for the construction of public works, which will ensure their construction as fast as they may be needed, or as fast as the means therefor can be furnished.

The State made a double mistake when she undertook to aid the railroads. The system proposed was entirely too large, while its credit proposed to be extended was upon such conditions as rendered it entirely unavailable. It simply encouraged the railroad companies on to their own destruction. At no time since their issue, could

the State bonds be sold at any price, for the very good reason that no adequate provision was made for the payment of their interest. Had this been done, the two roads, instead of being brought to the hammer, would at this time have been in active operation.

Alarm Whistle Indicators.

The SPEAKING PIPE is fast coming into general use. Scarcely a building has been constructed of late years without the insertion of one or more of them therein. For hotels, factories, store-houses, offices, etc., they are indispensable; and no private dwelling can be said to have *all* the "modern improvements" unless the SPEAKING PIPE has been also included. They are far preferable to bells, which require to be answered in person; whereas a query propounded through the pipe can be replied to immediately through the same channel. The great difficulty heretofore has been to make the voice heard beyond a certain limit, and often a bell was required in connection with the pipe to call attention to it. Now, however, since the introduction of the ALARM WHISTLE, the necessity for the bell is entirely precluded, as the whistle can be heard to the most remote corner of the largest room. We give elsewhere the advertisement of the manufacturer, accompanied by a representation of the entire apparatus. They are usually affixed to both ends of the pipe. The whistle is within the box, held firmly against the inner edge of the mouth-piece by a spring attached to the lower end of the crank, of which a view is given. In using, the crank should be turned back by the thumb, carrying with it the whistle, the alarm is then sounded by blowing (through the pipe) the whistle at the other end. In conversation, both ends require to be open. We have them in use both in our offices and at home, and of all the modern improvements, we find this the most useful.

Marietta and Cincinnati Railroad.

The trustees for the bondholders of this road, consisting of Messrs. Noah L. Wilson, Wm. F. Roelofson, E. W. Fernie, David Gibson, Thomas W. Powell and J. J. Heseltine, took formal possession of this road on the 8th inst. Mr. Wilson was elected Chairman, and Mr. Roelofson Secretary. Orland Smith, Esq., the late Receiver, has been appointed Agent and Superintendent. He immediately issued a circular to the *employees* under the previous organization, continuing each in his position, at the same salary, until further orders.

Lexington and Southern Kentucky R. R.

This new company has been organized by the election of CHARLES CALDWELL, President, *pro tem.*, WM. J. MOBERLY, Secretary, and A. G. GOWER, Superintendent and Engineer. The early completion of the road to the Kentucky river, to which point it is already graded from Nicholasville, will insure its rapid construction to Danville via Harrodsburg.

Bethlehem Rolling Mills.

At the last session of the Pennsylvania Legislature a supplement to a law of 1857 was passed, incorporating "The Bethlehem Rolling Mill and Iron Company," to be located at Bethlehem. Within a few days a subscription to the stock was opened, and has already been filled by capitalists in that region and in Philadelphia, to within some twenty thousand dollars of the required amount.

Kentucky Central Railroad.

A meeting of the directors of this road was held at Danville, Ky., on the 6th, where they were met by a committee of citizens of Boyle and adjoining counties, for the purpose of discussing the question of an extension of road. No definite action was taken, but a comparison of views and propositions gave much confidence in the ultimate completion of the work.

It is understood that a number of the citizens of Danville, have determined to take stock in the road, and active measures will be taken to raise the amount required for its completion.

New York Machinery Depot.

In another column will be found the advertisement of Messrs. STEVENS, BROTHER & Co., of their establishment at 222 Pearl street, New York, at which they have an extensive assortment of machinery of all kinds, embracing Stationary and Portable Steam Engines, Lathes, Planes, Drills, Belting, Woodworth's Planing Machines. Also Dick's Celebrated Anti-Friction Shears, Presses and Punches. Dick's Press enjoys the reputation of being the most convenient, easily handled and powerful presses ever constructed, and is rapidly superseding all other kinds. It has only to be seen to carry conviction as to its value. At the Messrs. STEVENS establishment, railroad companies and parties wanting machinery of any kind can be promptly supplied.

☞ We invite attention to the Advertisement in another column of R. T. EDWARDS, Esq., by reference to which it will be seen that he has for sale *Wrought Iron* and *Cast Iron Pipe*, and connections for Steam, Gas and Water purposes. Also Tools of every description connected with the trade. Lightning Rods and Fixtures of all the various kinds, constantly on hand at manufacturers prices. Address R. T. Edwards, Esq., 261 Pearl St., New York.

Mississippi and Missouri Railroad.

This Company held its annual meeting in Davenport, on the 4th. The officers elected were:

President—Hon. J. A. Dix, of New York.
Treasurer—F. H. Tows, of New York.
Secretary—Hiram Price, of Davenport.

The old Board of Directors was elected, and Hon. J. B. Grinnell, of Grinnell, Iowa, was added to the Board, which embraces Hon. N. B. Judd and W. B. Ogden, of Chicago.

This road is now progressing westward, through the energy of Mr. Durant, of New York, the contractor, who will soon have thirty miles of track laid west of Iowa City.

Peoria and Bureau Valley Railroad.

The stockholders of the Peoria and Bureau Valley Railroad Company held their annual meeting on the 8th inst., and elected the following directors for the ensuing year:—N. B. Judd, H. Farnham, Chicago; T. C. Durant, Clark Durant, New York City; John Hamlin, Peoria; F. Tows, New York City. Hon. N. B. Judd, of Chicago, was re-elected President, and all the o'd officers were also re-elected.

Sunbury and Erie Railroad.

It is understood that the Sunbury and Erie Railroad Company will run their own road from Sunbury to Whetam, a distance of eighty-three miles, on and after the first day of July next, when they will have one hundred and forty-nine miles in operation.

Lake Ontario and Hudson River Railroad.

The Lake Ontario and Hudson River Railroad was sold in the village of Saratoga, on the 11th inst., by a decree of the Court, on foreclosure, for $5,000. The purchase includes the road-bed from Greenfield, in Saratoga County, to Sacketts' Harbor, with the franchise and charter. The referee will proceed to sell the lands belonging to the company, aside from their road-bed, forthwith. We presume that a new company will be immediately organized on the ruins of the old. The expenditures that have been made on the line of this road, which are considerable, will enure to the benefit of the new parties.

Pilot Knob, Cape Girardeau and Belmont Railroad.

The people of Cape Girardeau are agitating the question of extending the Iron Mountain Railroad from Pilot Knob through Cape Girardeau to Belmont, opposite Columbus, Ky., there to unite with the Mobile and Ohio road, and, through it, with the entire scheme of Southern roads. They are heartily seconded by the citizens of Columbus, and we observe that a Convention of the friends of the project is called to meet at Cape Girardeau on the 27th of June.—*St. Louis News.*

Hudson River Railroad.

At an election for directors of this road held on the 11th inst., the following gentlemen were chosen: Samuel Sloan, James Boorman, John David Wolfe, Edward Jones, William Kelly, D. Thomas Vail, Erastus Corning, Wm. H. Hays, Robert P. Getty, Henry A. Smythe, J. B. Johnston, E. H. Miller, Moses H. Grinnell. At a subsequent meeting, Samuel Sloan was re-elected President and D. Thomas Vail, Vice-President.

Terre Haute, Alton and St. Louis Railroad.

At a recent meeting of the stockholders of this road, held at Mattoon, Ill., the following Board of Directors were elected: Wm. D. Griswold, Terre Haute, Ind.; Robert Smith, Nathaniel Hanson, Alton, Ill.; Anthony Thornton, Shelbyville, Ill.; R. B. Sutherland, Dudley, Ill.; T. A. Marshall, Charleston, Ill.; J. P. Usher, Terre Haute, Ind.; John Stryker, Rome, N. Y.; Chas. Butler, New York City; Willis Phelps, James Barnes, C. Rice, Springfield, Mass.; L. P. Sanger, St. Louis.

New York Central Railroad.

The earnings of this road for 8 months of the present fiscal year, are $4,351,461 against 3,926,147 for 1859, showing an increase of $425,314 The rate of increase has been about 11 per cent. A similar rate for the year would give a total increase of about $700,000, which is equal to nearly 3 per cent. on the capital stock of the company. The rapid recovery in the earnings of the road would seem to render certain the continuance of fair dividends. The rate paid the past year was 7 per cent.—the amount being $1,679,782. The total earnings of the present year will be about $7,000,000.

Galena and Chicago Railroad.

The following gentlemen have been elected directors of this road, viz: W. L. Newberry, W. H. Brown, John Wentworth, O. Lunt, F. Mosely, J. McCord, Jonathan Burr, F. K. Rogers, Chicago; Wm. Larned, New York City; D. A. Knowlton, Westfield, N. Y.; W. H. Ferry, Utica, N. Y.. Thos. Robinson, Rockford, Ill.; Charles S. Hempstead, Galena, Ill. The Board of Directors subsequently met, and re-elected W. L. NEWBERRY, President, and W. H. BROWN, Vice-President.

Chartiers Valley and Pittsburg and Steubenville Railroads.

We observe, by proceedings of meetings held at Mansfield and Bridgeville, that the people along the lines of the Chartiers Valley and Pittsburg and Steubenville Railroads are making a movement in the right direction to insure an early commencement and completion of these valuable improvements, by relinquishing all claims for rights of way, lands and damages. To the citizens on the south side of the river, these roads will be of immense benefit in affording them facilities for coming to the city, and for the transportation of the products of their farms, their coal, stock, &c. We have always felt that, were we the owner of property, we would afford every possible facility to improvements of this sort. What is the value of a few acres of land, occupied by a railroad, in comparison to the many advantages that the property-holder along the line derives from its use? Familiar as we are with the character, quality, and location of lands on the south side of the Monongahela, we should not be at all surprised to see both these lines of road dotted with country seats, villages, and hamlets, from one end to the other. An hour's ride will carry the resident of Washington to Pittsburg and an hour and a quarter will bring the citizen of Steubenville here—intermediate travel in proportionate time. We are informed by those who have taken the trouble to inquire, that were this question of right of way, &c., properly adjusted, the work on both these lines would, in all probability, be speedily commenced; without the settlement of this vexed question, it is difficult to say when, if ever, anything will be done on these important works.—*Pittsburg Dispatch.*

Mississippi, Memphis and Missouri Railroad.

We learn from a communication the prospects of this road are flattering. It commences at Canton, Missouri, on the Missouri River, and runs through the northern tier of counties *via* Memphis in that State, and making its western terminus at Council Bluffs. The enterprise was projected but a few months since, but we learn that several miles of the road, including the roughest and heaviest work, from the river bottom to the table land, are graded, the heaviest bridge of the first section completed, and thousands of ties laid along the line ready for the track. It is intended to prosecute the grading through the prairie at the rate of a mile a day, and it is the intention of the Company to complete and stock the road for running, as far as Memphis, fifty miles from Canton, by the first of January next.—*Cin. Com.*

Iron for the St. Joseph and Marysville Road.

The steamer St. Cloud has arrived, with five hundred and sixty tons of railroad iron, being a part of the purchase made for the above road. The iron will be forwarded by the Hannibal and St. Joseph Railroad immediately, and the work of track-laying will commence by the middle of this week. We have every reason to believe that the negotiations pending for the additional three thousand five hundred tons of iron will be consummated, which will enable the company to extend the track westward from the city a distance of fifty miles.—*Mo. Democrat.*

Watertown and Rome Railroad.

At the annual meeting of the stockholders of the Watertown and Rome Railroad Company, held at Watertown on the 6th inst., the following gentlemen were elected Directors of this Company for the ensuing year:

William C. Pierrepont, P. Manor, Philip Dater, Samuel F. Phelps, John P. Yelverton, Marcellus Massy, New York; H. Alexander, Jr., Henry Gray, Springfield, Mass.; David Ulley, Rome; Solon D. Hungerford, Adams; William Lord, Brownville; Calvert Comstock, Albany; Talcott H. Camp, Willard Ives, Watertown.

At a subsequent meeting of the Board, William C. Pierrepont was re-elected President, and B. E. Hugerford, Secretary.

Transportation from the West.

The Western Railroads centering at Cincinnati have reduced the through rates from Cincinnati to the four Eastern cities 10c. on Flour, and 5c. on fourth class Freight. The following, then, are the new rates:

	Flour.	4th class.
New York, rail	$ 90	45
New York, rail and water	80	40
Boston, rail	1 00	50
Boston, rail and water	90	45
Philadelphia, rail	80	40
Philadelphia, rail and water	70	35
Baltimore, rail	70	35
Baltimore, rail and water	60	30

Chicago and North Western Railroad

The following gentlemen have been elected directors of this road for the ensuing year: Wm. B. Odgen, Chicago; W. A. Booth, John Maxwell, H. H. Boody, Charles Butler, New York; T. H. Perkins, Boston; Geo. M. Bartholomew, Hartford; M. C. Darling, P. H. Smith, J. J. R. Pease, A. Winslow, L. M. Miller, A. L. Pritchard Wisconsin.

The new Board organized and appointed Wm. B. Ogden, President; Perry H. Smith, Acting President; George L. Dunlap, General Superintendent; Geo. P. Lee, Treasurer, and E. De Witt Robinson, General Ticket Agent. These appointments are all old officers of the road.

Hackensack Railroad.

The project of building a railroad between the village of Hackensack and some point on the line of the New York and Erie has been agitated for several years. Last Winter some amendments were obtained to the charter, after which the stock ($70,000) was subscribed by residents along the line. The work has been let to contractors, who are now energetically at work on different points of the route, and expect to have the grading completed by September next. The road will unite with the Erie near Boiling Spring, about eight miles from Jersey City, proceeding along the base of Berry's Hill, to its terminus, five miles, with a branch to the village of Lodi, one mile in length. There are no large rivers requiring to be bridged, no heavy excavations to be made, or depressions to be filled; the land will cost almost nothing. Hackensack is one of the most attractive villages in the State, with a population approaching two thousand, and growing rapidly. Lodi is principally know for its extensive print works, now employing four hundred operatives. The tonnage to and from that place will form a very important portion of the business of this road. It is expect- to be in running order by November, when frequent and cheap trains will be run to and from the Long Dock.

Dubuque and Pacific Railroad.

At the annual meeting of the stockholders of this road, recently held at Dubuque, the affairs of the company were found to be in an improved condition. Arrangements are being made to complete the road from its present terminus to Cedar Rapids, a distance of twenty miles. This will take the road to the rich valley of the Cedar, nearly one-third of the distance to the Missouri. It is now finished ten miles west of Independence, and eighty miles west of Dubuque.

The Rockville Railroad.

The Board of Directors of the Evansville and Crawfordsville Railroad have appointed B. B. Ebbitt, Esq., Chief Engineer of the new line from here to Rockville. Mr. Ebbitt informs us that he is now engaged surveying an air-line route through this county to the edge of Parke. There is no longer any doubt about the completion of the road to Rockville, and we congratulate our citizens on the prospect for another railroad leading into a rich and fertile region of country.—*Terre Haute Journal.*

Pike County Railroad.

At the annual election of the stockholders of the Pike County Railroad, held in Griggsville, Ill., on the 4th inst., the following gentlemen were elected Directors for the ensuing year: Maj. Thos. A. Harris, Judge John B. Helm, Geo. W. Shields, T. H. Towner, Wm. T. League, Geo. Wike, Alex. Starne, Jas. McWilliams, O. M. Hatch. Major Thomas A. Harris was elected President, M. S. Ayre, Secretary and Treasurer, and Joseph E. Clough, Chief Engineer. We learn that the work is progressing finely, and that the grading, masonry and bridging will be completed from the Illinois river to the Mississippi river in sixty days.—*St. Louis News.*

$500,000 EIGHT PER CENT. LAND GRANT MORTGAGE BONDS OF THE TEXAS AND NEW ORLEANS RAILROAD COMPANY (Texas Division), secured by a mortgage upon one hundred and six (106) miles of railroad and its appurtenances, of the estimated cost of $2,920,000, and upon seven hundred and sixty-eight thousand (768,000) acres of valuable land, are now offered to the public as one of the most desirable and reliable securities at present upon the market.

THIS ROAD

is the Texas Division of the great trunk line which, within twelve to eighteen months, will connect Houston, Galveston and every important point in Texas, with New Orleans, and, in communication with the lines running North and already completed, place New York within 90 hours of Houston.

THE BONDS

will be redeemable on 1st November, 1878, bear 8 per cent. interest; coupons payable semi-annually, on 1st May and 1st November, in the City of New York.

As additional security for prompt payment of the coupons, pending the completion of the entire road, are mortgaged by special trust-deed, 76,800 acres of land, together with town lots and individually donated lands, at present valued at $600,000.

Maps, prospectuses, copies of charter, trust deeds, land grants, and every information, may be had upon application to C. CONGREVE & SON, No. 6 Pine st.; or E. WHITEHOUSE, SON, & MORRISON, No. 38 William st., Merchants' Exchange.

LYONS' TABLES.

To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

Sheet No.				Sheet No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft.	Slop.	1½ to 1
2.	For Side Hill Cuts and Fills.			14.	" 20	"	1½ to 1
3.	Base 12 ft.	Slopes	1½ to 1	15.	" 24	"	¼ to 1
4.	" 14	"	1½ to 1	16.	" 24	"	1½ to 1
5.	" 15	"	¼ to 1	17.	" 25	"	1½ to 1
6.	" 15	"	1 to 1	18.	" 26	"	1½ to 1
7.	" 15	"	1½ to 1	19.	" 28	"	¼ to 1
8.	" 16	"	½ to 1	20.	" 30	"	1 to 1
9	" 16	"	1 to 1	21.	" 30	"	1¼ to 1
10.	" 18	"	¼ to 1	22.	" 30	"	1½ to 1
11.	" 18	"	¾ to 1	23.	" 32	"	1 to 1
12.	" 18	"	1 to 1	24.	" 32	"	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

MANUFACTURERS OF
MASON'S SPERM OIL,
AND DEALERS IN
SPERM, WHALE, LARD AND OTHER OILS,
For Railroads, Steamers, Machinery and Burning.

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.

TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the

EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of timekeepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855.
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST.,
NEW YORK.
THIS Company manufacture ROSENDALE HYDRAULIC CEMENT of a superior and uniform quality, and are constantly receiving it fresh from their Works at Rosendale. Particular attention paid to grinding fine, and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER
CEMENT COMPANY.
THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER, and MARBLE DUST, all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of dry concrete and Underwater Works. Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the Works under Government.
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing 300 lbs. of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), at all seasons of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, Hudson River Cement Company, Jersey City, N. J., or J. H. BUTTS, Secretary.
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We warrant it equal in every respect to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a superior article for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by DELAFIELD & BAXTER, 104 Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: HOFFMAN'S ROSENDALE CEMENT. This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

Rosendale Hydraulic Cement.
THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving fresh from the Mills their approved ROSENDALE CEMENT, warranted pure and free from quick lime, and which has given such general satisfaction in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the genuine ROSENDALE CEMENT, branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight kiln dried barrels, and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,
JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

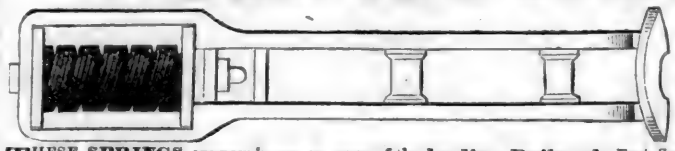
16 John st.,
NEW YORK.

THE HUMPHREYSVILLE MANUFACTURING COMPANY,

(SUCCESSORS TO DWIGHTS, FRENCH & CO.)

SEYMOUR, CONN.,



ARE prepared to fill, at short notice, of the best materials and workmanship, orders for **Wrought and Cast Iron Work**, fitted ready for use, for the building or repairs of **Passenger** and **Freight Cars**, complete or in part.
A sample wrought iron truck can be seen at our office. **No. 5 Gold st., NEW YORK.**

We also manufacture—
BEST FAGGOTTED CAR AXLES,
SALISBURY IRON CAR WHEELS,
WROUGHT IRON BOLTS, NUTS & WASHERS,
RAILROAD JACK SCREWS, ETC.

RAYMOND FRENCH, Pres't, Seymour, Conn. **WM. H. MARSHALL**, Treas'r, No. 5 Gold st., N. Y.

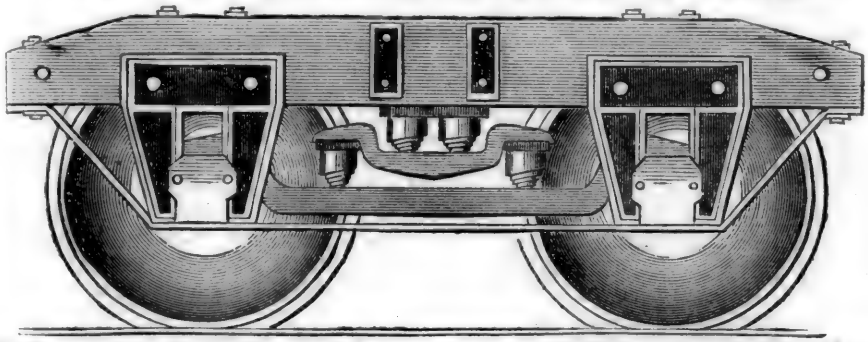
STEEL CAR SPRINGS,

MANUFACTURED BY THE

PATENTEE,

Carlos French,

SEYMOUR, CONN,



THESE SPRINGS are now in use on many of the **leading Railroads** East, South and West. Samples can be examined and Price Lists obtained at **No. 5 Gold st., NEW YORK.**

THE METALLIC CAR SPRING COMPANY

OF NEW YORK,

Manufacturers of PATENT CONICAL VOLUTE STEEL CAR SPRINGS.

OFFICE, 54 WILLIAM STREET, NEW YORK,

WITH increased capital and facilities, and ability to meet all orders promptly, this Company respectfully invite the attention of Railroad Managers, Car and Engine Builders, and others interested in Railroad Machinery and Economy, to these Springs, and the improvements in their application. Orders and correspondence solicited.

CHARLES D. GIBSON, Treasurer. **COURTLANDT PALMER, Pres't.**

Mining Intelligence.

Mining operations will be carried on quite extensively this summer on the Porcupine Mountains. From all accounts the exertions of the company that worked there the past winter, will be well rewarded. A new vein has been discovered on the Bruce mining location, and is reported as having a width of five feet, and to be exceedingly rich in copper ore. The place where it has been opened, is a short distance westward of the present workings.

The product of the Minnesota mine for April was 315,927 pounds, or 157 tons, 1,927 pounds; Rockland, 80,190 pounds; Superior, 2,443 pounds. We have not yet heard the exact product of National for April, though it is reported at about sixty tons.

The whole quantity of Mineral raised from the Minnesota mine from January 1st to December 31st, 1859, was 1,626 tons, or 3,252,117 lbs. of mass, barrel, and stamp copper, in the following proportions, viz:

Mass copper	63 per cent.	or 2,040,454 lbs.
Barrel copper	29 "	929,571 lbs.
Stamp copper	8 "	282,092 lbs.
Total product		3,252,117 lbs.

being an average product of 135½ tons per month. We also obtained 88 lbs. of silver ore, which yielded $664 61, or $7 33 per lb.

The whole quantity of mineral forwarded from Ontonagon to Detroit during the past season, was 3,247,843 lbs., or nearly 1,624 tons—all of which was smelted as heretofore at the Detroit Smelting Works, and produced 2,805,204 lbs. of ingot copper, being a yield of 71 per cent., or nearly one per cent. more than the yield of 1858.

Of these receipts, 2,118,951 lbs. have been sold and delivered, realizing the gross amount of $466,481 51, or an average rate of 22 cents per lb., being nearly two-thirds of a cent. less than the sales of the previous year. The balance, 186,253 lbs., is on hand, and worth, at the present market price, about $43,304. The net earnings are $131,391 32.

The Houghton *Mining Gazette* of 16th May says:

The new No. 4 shaft at the Pewabic is nearly completed, and will be in condition for hoisting by the 1st of June next. At this time a large force will be put to stopping, and the large amount of good ground opened during the past season will be put under contribution to enlarge the product. Mr. Palmer and others around the mine are confident that the asserted amount can be readily shipped, since the rock which had been stamped since the commencement of operations at the mill has not been of the richest description. Much better stamp rock is to be sent down in future. The necessary machinery for the stamp mill of the Quincy has arrived per General Taylor, and it is expected that operations will be resumed within ten days. Had it not been for the unfortunate accident to the engine, Mr. Hill could greatly have exceeded his promised amount of 300 tons to be shipped during the present season. As it is, that promise will certainly be fulfilled, and we firmly believe, from the manner in which the ground has been opened, and from the very good show of heavy barrel and mass copper, that a respectable amount over the stated one will be shipped. The Naumkeag Mining Company owns the lands immediately back of the South Side tract, on the presumed course of the Pewabic lode. The property is under the superintendentship of Mr. C. Eschweiler. No explorations have as yet been made, though the company was organized last season, but the operations are to be influenced, and in a certain measure directed, by the results of the explorations on its neighbor, the South Side. Not much can, therefore, be predicted on the value of this property for mining purposes, though we are inclined with others to already pronounce favorably on it, from its position relative to both Dacotah and South Side. The machinery for the Franklin stamp mill is to be up by the 1st of July next, at which time the building and everything will be in readiness, so that no delay will occur in placing the stamps, etc., *in situ*. The mail will be in running order before the close of navigation. Work has been commenced on the tram road. By late advices from the Ontonagon district, we are informed that the National, Minnesota and Rockland mines never promised better. In the Minnesota they are finding heavy copper in the lower levels.

Cincinnati Street Railroads.

Below we give the earnings and expenses of the Cincinnati Street Railroad Company from September 14, 1859, to May 1, 1860.

Journal of Railroad Law.

RAILROAD CORPORATIONS; LIABILITY OF FOR THE TRESPASS OF ITS LESSEES AND CONTRACTORS WHILE OPERATING ROAD, DURING ITS CONSTRUCTION.

A case has been recently decided in the Supreme Court of the State of Illinois, holding that a railroad corporation is liable for injuries received by third persons, although such injuries are the immediate act of the lessees of the corporation, or of its contractors while operating the road; and an action of trespass may be maintained by the party injured against such company.

The action came before the court upon an appeal from the judgment of the circuit court of Peoria county, dismissing a writ of certiorari issued in the case, to review the proceedings of the Justice of the Peace, before whom the action was originally brought, and in delivering the opinion of the Court the Justice explains the nature and purposes of the writ of certiorari. The case to which we allude is the Chicago and Rock Island Railroad Company *vs.* Whipple. On the 12th of November, 1853 a judgment was rendered by a justice of the peace in favor of Whipple and against the Chicago and Rock Island Railroad Company, for the sum of $7,120 and costs. The petition of the company for the issuing of the writ stated that the plaintiff's claim was for cattle killed on the road before that time; that the action, which was an action of trespass, would not lie against the defendants in the said suit, because they were not running, controling, or managing the road, but the same was run, controled and managed by Farnham and Sheffield, contractors to build the same, for their own use and profit. That the justice had no jurisdiction of the subject matter of the suit, or person of the defendant's, that neither the said petitioners, nor any for them, appeared before the justice at the day of the trial, or any other time to answer to said suit; that Buck, on whom the process was served was never their agent, and that there never was any service of process on the petitioners and they knew nothing of the suit until more than six months had elapsed after judgment was rendered against them, and not until they were again sued upon the same judgment about the middle of September, 1854.

Upon this petition a writ of certiorari was issued; and at the December term of the following year, the plaintiff, in the original suit, now the defendant, moved to quash the writ of certiorari and dismiss the suit.

Upon the hearing of the motion, the counsel for the company offered to prove that the Chicago and Rock Island Railroad Company, was not in existence at the time of the rendition of said judgment in the Court below, and that the said judgment and all costs had been fully paid since the rendition of said judgment, and also that another suit had been brought on said judgment below, and a new judgment rendered upon it, by which subsequent judgment, he insisted the original judgment had been fully satisfied, and merged in the subsequent judgment. The Court rejected the evidence offered, dismissed the writ of certiorari, and plaintiff excepted, and appealed to the Supreme Court. The following is the opinion of the Supreme Court, affirming the decision of the Circuit Court.

WALKER, J.—By the English practice after judgment has been rendered, by an inferior court, the common law writ of *certiorari* is allowed for the purpose of ascertaining whether it appears from the *record* that the inferior court had no jurisdiction, or had proceeded illegally in the cause. When it appears from the record, returned into the Superior Court, that there was a want of jurisdiction, or that the inferior court has proceeded contrary to law, the practice is to quash the judgment; but, in such it is not the practice to ascertain from extrinsic evidence whether the inferior court had jurisdiction, or had proceeded contrary to law, but to determine these questions by the record. By the practice in this State, "the common law writ of *certiorari* may issue to all inferior tribunals and jurisdiction, in cases where they exceed their jurisdiction, and in cases where they proceed illegally, and there is no appeal, or other mode given to directly review their proceedings. These are the only instances in which their proceedings can be reviewed on *certiorari*."

The Circuit Court on the return of the record by the Justice of the Peace, had no power to form and try an issue of fact, in regard to the jurisdiction or regularity of the proceedings of the justice. Those questions could only be tried by the record. The court could not review the evidence heard by the justice, nor inquire into the correctness of the decision on that evidence. It is no part of the office of a writ of *certiorari* to an inferior tribunal, to bring before the court from which the writ is issued, the evidence heard in the court below, nor can the court receive testimony to show what that evidence was.

To hear such evidence, and reverse or affirm the judgment in this proceeding, would well-nigh destroy the binding effect of all judgments of justices and inferior jurisdictions. Such a practice would tend to increase litigation, unsettle rights acquired under such judgments, and would virtually give an appeal in all cases, at any time within the period of the statute of limitations. No benefit could result, and interminable strife would be the inevitable consequence of such a practice. The Circuit Court, we think, did right in rejecting the evidence offered on the hearing of the motion to quash the writ of *certiorari*.

It was again urged that the appellants could not be held responsible for the injury complained of, because they allege that the company was not organized at that time. The petition, on its face, shows that they were then having their road constructed, and they cannot be heard to say that they were assuming rights and franchises under their charter, and yet insist that in their exercise they may exonerate themselves from liability for injuries inflicted upon others. By their own showing they were constructing this road, by persons with whom they had contracted for that purpose. And the fact that the road was then operated by these contractors can make no difference. These contractors derived all their authority from the company, and for their tortious acts, while exercising the franchises granted to the corporation by their charter, the company must be held responsible. Nor can the appellants insist that those operating the road were lessees, and that they are thereby released from liability for their wrongful acts, as the lessees occupy the relation of servants of the company as to third persons. A railroad company cannot free themselves from liability by leasing their road to others. It then follows that the responsibility of the appellants was the same, whether the road, at the time the injury was done, was being operated by themselves, their servants, agents, lessees, or the contractors for its construction. And if the record of the Justice of the Peace, showed that the action was brought for a cause in which he had jurisdiction, then it would be error in the Circuit Court to quash the judgment. And from this record it appears that the action was brought for a trespass to personal property, and the statute expressly confers such jurisdiction upon Justices of the Peace.

The service of the process in this case was strictly in compliance with the requirements of the Act of 8th February, 1853, and is similar to the service in the case of these appellants against Mary Fell, decided at the present term of this court, in which the service was held to be sufficient. This objection is, therefore, not well taken.

Upon the whole record, in this case, no error is perceived, requiring the judgment of the Circuit Court to be reversed, and the same is therefore affirmed.

Pacific Railroad.

It is very gratifying to be called upon to notice the successful movements of the managers of this Company, in putting large portions of the road under contract for immediate construction. Not long since we announced arrangements by which the completion of fifty-five miles of road-bed from Syracuse westward, was secured—leaving the Company to provide the rails, part of which are now being laid down. For a few days past, Mr. MAUGHS, the Mayor of Kansas City, has been in this city, conferring with the Directors upon the practicability of immediately commencing operations from that city, in an easterly direction to Independence. They were not long in agreeing upon terms by which the road-bed for that distance will be put under contract by the 20th of July—Kansas City and Jackson county furnishing means for this purpose, and the Company laying down the rails. This will be accomplished by the meeting of the Legislature next winter. It is also expected that the whole of the route through Jackson county—thirty miles—will at once be contracted for, and carried on with all possible expedition. When this is done, only thirty miles of the whole line of road will remain uncontracted for, and by the early part of next spring, using coaches for the gap of thirty miles, passengers will be put through from St. Louis to Kansas City in sixteen hours. By the end of the summer, with such exertions as are now being made, the road will be opened for travel from St. Louis to Kansas City, and not much more than half a day will be required to make the trip.

The Company has lately paid off a debt due in Europe amounting to some ninety thousand dollars, and retired the securities upon a portion of it lands hypothecated for that purpose. Mr. ADOLPHUS MEIER, who is about to visit Europe, will be commissioned to negotiate for rails sufficient to iron the whole route, and this, it is believed, will be done.

The county of Cass will be invited to change her subscription of $150,000, so as to put a part of the

road in that county under contract. They ought by all means to do it.

We are glad to know that definite and satisfactory arrangements have been made between the Lexington and St. Louis Company and the Pacific Company, which remove all obstacles to the immediate commencement of the road from Lexington to connect with the Pacific Road. The county of Lafayette is abundantly able to build this branch road, and we like the zeal with which they have undertaken to do it. The contractors will be at work on it next month.—*St. Louis Republican.*

Chicago, Iowa and Nebraska Railroad.

The Chicago, Iowa and Nebraska Company, which connects at Clinton with the Galena and Chicago, and in both of which roads the same parties are interested, stands to-day before the people of the State without a rival in many respects. They have built more miles of road, in less time, at a less cost per mile and with less aid from counties or people within this State, than any other road; and the road is this day earning more net money upon the amount invested than any other road. It is in every way deserving of public favor and confidence, and the parties who have thus come into our State and expended their means, almost unaided, and in direct competition with roads north and south, with large grants and local aid, and have succeeded thus far independently in pushing their road to successful completion to Cedar Rapids, are, in our opinion, eminently entitled to receive at the hands of the Legislature the testimonial of the confidence reposed in them which the transfer of this grant from the defunct Iowa Central Company conveys. No road or company in its infancy was more abused or derided than this one was by its corpulent competitors, and it is a monument of what individual effort and perseverance will do; and while its opponents are now dragging slowly along, or stopping quietly at rest with their roads, this company is ready to push forward its road into the heart of Iowa, and use with economy the rich aid now placed within its power.

For the active working men now comprising this company we have the highest praise, particularly for Mr. L. Crocker, its efficient Vice-President. And, in this connection, it is proper for us to say that no company in this State has more solid, substantial men interested in its affairs than this company. Its stockholders east are men of means and character, who have built it as a paying investment, and a rigid system of economy has marked all their operations thus far. They are business men, and have built this road upon business principles.—*Muscatine Journal.*

Mississippi, Memphis and Missouri Railroad.

We have a communication from a gentleman of of this city, which is deferred to our next issue, giving a very flattering account of the progress, prospects, etc., of this road, commencing at Canton, Mo., on the Mississippi river, running through the northern tier of counties, via Memphis in that State, and aiming to Council Bluffs as its final terminus.

This enterprise was only projected within a few months past, yet, according to our correspondent, who has been upon the ground and knows whereof he writes, several miles of the road, including the roughest and heaviest work, from the river bottom to the table land, are already graded, the heaviest bridge of the first section completed, and thousands upon thousands of ties along the line ready for the track; and all this within five weeks from the first breaking ground. With the machinery employed, and the admirable system adopted, by the Company, it is expected that they will prosecute the grading through the prairie at the rate of a mile a day; and it is their intention to complete and stock the road for running as far as Memphis, fifty miles from Canton, by the 1st of January, 1861. From information furnished by our correspondent, we have good reason to believe that the Iron Horse has already started from Canton, and is making his way westward through the richest portion of Missouri, almost within sight of southern Iowa, towards the Missouri river.

Our correspondent shows the merits of his route in point of eligibility and economy of construction, with its superior advantages of connection, in the saving of distance to eastern markets.—This should be an additional stimulus to our people in pushing ahead the Council Bluffs and St. Joseph road, now so auspiciously under way, to meet the "M. M. & M." Railroad in the vicinity of the State line.—*Council Bluffs Bugle.*

The Reciprocity Treaty.

Mr. I. D. Andrews, late United States Consul General for the British Provinces, has addressed an interesting memorial to Congress, remonstrating against the proposed abrogation of the Reciprocity treaty. He says it has effected an increase of trade without parallel in the commercial history of the country. In consequence of this treaty, the trade between the United States and the British American Provinces was more than trebled in four years, having increased from $16,000,000 in 1852 to $50,000,000 in 1856, and having amounted to near that sum the past year, although a period of great depression. Our exports amounted to $28,154,174, and our imports to $19,727,651. These figures are taken from the Treasury returns. This trade employed a tonnage of over three and a half millions of tons upon the great lakes and the Atlantic coast, about equally divided between the American and colonial built shipping. It has greatly exceeded the anticipations of its advocates. The abrogation of the treaty, Mr. Andrews considers would be a deplorable calamity to both countries. Ships and warehouses have been built, extensive business arrangements have been made, and a vast capital invested in the colonial trade, on the faith in the continuance of the present treaty. Even if it be correct, as averred, that Canada has violated the spirit of the treaty, retaliatory action, besides being injurious to ourselves, would be manifestly unjust to the three important and rising colonies of Nova Scotia, New Brunswick and Prince Edward's Island, and the valuable outlying colony of Newfoundland, all of which have faithfully adhered to its stipulations, and under its provisions have established a mutually advantageous trade with New England and other Atlantic States. Besides, the treaty secured to this country important concessions. Under its provisions, the river St. Lawrence, the natural outlet of the great West, has for the last six years, for the first time since the treaty of peace of 1783, been as perfectly free to the people of the North-western States as to the Canadians. The original rights of this country to the fisheries so long in dispute have been regained by the treaty, and the dangerous irritation which that question annually occasioned for near forty years has so completely subsided that for seven years no ship-of-war has been required to make its annual visits to the fishery grounds to protect the rights of American fishermen.

Mr. Andrews not only protests against the repeal of the treaty, but desires that Congress will refer the subject of our commercial intercourse with the British Provinces to an appropriate committee, with the view, if the facts justify it, that a report may be presented to Congress that will reassure the large number of persons interested in it, who have already suffered from the attacks made upon the treaty, which have unsettled their business.

Tarboro' Branch Railroad.

We had the pleasure, says the Tarboro' (N. C.) *Southerner*, of seeing S. L. Fremont, Esq., and Mr. H. McRae, in our town, a fews days ago, from whom we learned that the work on our Branch Railroad was satisfactorily progressing, and sanguine hopes are entertained of completing it to this town by the 1st July next. Under the supervision of those energetic and indefatigable officers, ably seconded by the industry and perseverence of the contractors, with about 160 hands, we feel confident of the completion of the road and bridge by the 1st October, the time specified in the contract.

Genesee Valley Canal.

Toll received at the Collector's Office, Olean, for the month May, 1860, compared with May, 1859

May, 1860	$6,989 40
May, 1859	4,973 49
Gain over May, 1859	$2,015 91
Amount of toll received 1st week in June, 1860	$2,070 39
Do. 1859	1,984 10
Gain over 1st week June, 1859	$1,036 29
Amount of toll received 2nd week in June, 1860	$2,068 25
Do. 1859	245 92
Gain over 2nd week in June, 1859	$1,822 32
Amount of toll received from opening of navigation to 14th June, 1860	$11,585 69
Compared with same time in 1859	7,133 32
Gain over last year	$4,452 37

Madras Railway.

The half-yearly meeting was held May 3d, in the London Tavern; Major-General Sim in the chair.

The Directors stated in their report that the progress made in construction during the half-year had been satisfactory, and would bear a favorable comparison with the results of any previous period. The increase of traffic on the opened portion of the line was considerable, and the working had been conducted with its accustomed regularity, care, and freedom from accidents. The total quantity of materials, stores, and plant shipped during the half-year, amounted to 40,000 tons. The line was opened on 16th January, from Goriattum to Amboor, a distance of 17 miles, and on 1st of the following month to Vaniambody, 10 miles further. Advices of 13th March announced a further opening of 14 miles to Tripatore, making the entire distance now open from Madras 187 miles. Those extensions had brought the railway into connection with some of the principal roads of the interior. From Tripatore westward to Salem little more was required to be done than to finish the laying of the permanent way. The Board hoped to be able before long to announce the opening of the railway to that important point, which is half-way across the peninsula, being 207 miles from Madras. The engineer is confident that before the end of the year the road would be laid through to Paulghaut. The works on all the district west of Salem were expected to be near completion by the end of this year, and but little would then remain to be done before opening the railway throughout from one coast to the other. The length of the Bangalore branch, as now surveyed and set out, is 84½ miles. A great part of the land had been handed over by Government to the company's engineers, and the works had been commenced in several places. An early opening of eight miles of the Bellary line from Arconum junction to Trittany is anticipated. In the course of the year the engineer hoped to open further to Naggry, and soon after to Curcumbady. On the completion of the present issue of debentures, the amount of capital raised under the contract for the main or south-west line would be £4,000,000. A call of £5 per share was made on the 16th January on the million of share capital, "4th Extension," issued under the contract for the Bellary or north-west line. The working of the traffic on the souht-west line during the six months ending 31st December last had produced, for conveying 857,757 passengers, £14,857, against 151,300 passengers conveyed and £10,994 received during the corresponding half of the preceding year. The first class fares were reduced by one-third and the third class fares to one-half the previous amount since the 1st of August last. The receipts for goods traffic amounted to £9,597, against £6,823 in the corresponding half of the preceding year. The total receipts for the past half year amounted to £31,837, and the working charges to £12,166, or 38.21 per cent., against £21,760 and £8,750, or

40.21 per cent. respectively for the half-year ending 31st December, 1858, showing an increase of £10,078, or 46¼ per cent. on receipts, and of £3,416 in expenses. The traffic receipts per mile had gradually risen from £30 per month at the first opening of the line, in 1856, to nearly £57 per month in the last five months of 1859, being an increase of 90 per cent. in three years. The payments into the Government treasury at Madras, on account of net traffic earnings to 31st December, in reduction of interest advances, had amounted to £60,439; to which a further sum would be added on adjustment of maintenance charges for the last eighteen months. The rolling stock continued to be maintained in good and efficient order. Passenger trains traveled at 20 miles per hour, and the goods at 15 miles per hour. The total expenditure on capital account to 31st December amounts to £3,426,076.—*London Railway Times.*

Danube and Black Sea Railroad.

The half yearly meeting of the Shareholders of this Company was held on Thursday, 31st May, at the offices, Abingdon street, Westminrster. The following report of the Directors was submitted:—

"The directors refer the Shareholders to the annexed report of the engineers, with reference to the progress of the works during the last few months. That report justifies the expectation that the line will be ready for opening by September next, and that the harbor will, at that time, afford no inconsiderable protection to shipping. Under these circumstances, the attention of the Directors is being directed to the arrangements for the opening of the line. They have been in communication with the Danube Steam Navigation Company of Vienna, with whom they have arrived at an understanding, upon which an agreement, with a view of facilitating the interchange of traffic, will be based. They are now, with the concurrence of the Danube Company, negotiating with the Austrian Lloyds for the establishment of a system of through booking for passengers proceeding to or from Constantinople and Odessa from or to other parts of the continent of Europe. They are also in correspondence with other Companies interested in the navigation of the Black Sea. The Directors have informed these various Companies that while they are anxious to give the utmost facility to the traffic of all, they are not prepared to make exclusive arrangements with any one. As the amount of traffic to be expected this year would be be but limited, no expensive staff or complex organization will be necessary, but such preparation as may seem expedient for the occasion, will, in due course, be made. Though some time may be occupied in securing the extensive traffic anticipated, the Directors feel justified in expressing their conviction that the expectations formed on the subject, when the line was projected, will not prove illusory. Beyond the presentation of this report, the Directors have no business to bring before the meeting. The balance sheet of the Company is made up annually, and will in due course, be submitted to the meeting, which will be held in November next. The Directors have, however, satisfaction in saying that since the 30th of September last, a considerable sum (rather more than £20,000) has been received in Turkey, on account of the capital reserved for that country.

The claims for some land, of which possession has been taken by the Company, the rent to be paid for the Vacouf or Mosque property, and some other questions are still outstanding at the Porte; but the reports received from Mr. J. Trevor Barkley, who has lately proceeded to Constantinople under the instructions of the board, lead to the confident expectation that these matters will be all finally and satisfactorily arranged at a very early date."

The report of Messrs. LIDDELL and GORDON, the engineers states:—"We have the honor to submit to you a report respecting the progress and state of the works of the railway and harbor from information received up to the 10th instant, from which it will appear that the works of the railway are in so forward a state that the line may be opened on the 1st of September next with tolerably complete arrangements; and, as the line is now completed from the quarries to the sea, the work for the extension of the mole will proceed much more rapidly than has hitherto been possible, so that by September the shelter provided will be considerable. The whole of the works for the road, excepting the permanent way, were finished last year. About fourteen miles of the permanent way are ballasted, the rails are laid for a length of 24 miles, and the remainder will be laid as fast as they arrive at Kustendjie. All the rails, with the exception of points and crossings, have now left England, and unless some unforseen casualty occur, there can be little doubt that the whole of the permanent way may be completed by the end of August. The part of the way which is completed extends from the Kustendjie harbor to the quarries of Moorfatla, the point to which it has been so desirable to obtain railway excess, and which has been prevented till now by the loss of three cargoes of rails last year. The quarries at Moorfatla are well opened out, and have proved even better than was anticipated. Blocks of any size can be got out; the stone is of various qualities as to hardness and color, and admirably suited for the harbor work and building. The position, close to and rising cliffs along and above the railway, gives great facilities for quarrying the stone and loading trucks. A strong force has been kept at work at the quarries preparing stone for the harbor works, and from 3,000 to 4,000 cubic yards are now ready for transport by the line which, as before stated, is at last so far completed. A temporary sea wall as been run a little within the line of the permanent quay wall round the east side of the harbor, to the point, and upon the one fathom line. The whole of the space within this wall has been filled in with earth obtained in levelling the station side, and thus a large space of most valuable ground for quays has been reclaimed. The inner mole is already carried ont to the 4-fathom line, a distance of 63 yards, and preparations are made for working the tipping frames, by which, with stone brought from the quarries, this work will proceed much more rapidly than heretofore. The lighthouse is in course of construction. The frame for a third class light has been shipped, and the whole apparatus will leave this country early in June, so that the lighthouse may be in operation in September.—*Herapath.*

Baltimore Central Railroad.

This road is now graded to the Rising Sun, in Maryland, within eight miles of the Susquehanna river, and it is believed it will be opened for travel as far as Oxford, Pa., by the 1st of August. The completion of the road to this place will make an outlet that has long been needed for one of the finest agricultural regions of Pennsylvania, and will also enable a number of large manufactories of cotton, iron, paper and flour located in this region to reach a market, without being subjected, as they have been heretofore, to the necessity of transporting their merchandise in wagons. Oxford bears the impress of rapid improvement, which must soon make it a very considerable business point.—*Harrisburg Patriot.*

Ottawa and Prescott Railway.

The earnings of this road, says the Prescott, Ca., *Messenger*, "show a steady increase since the commencement of the present year, averaging some 20 per cent. The company have made contracts for transporting over their line the sandstone from Ohio to be used in the Government buildings at Ottawa, which will add very materially to their receipts. At this rate of progress, it cannot be many years before the company will be able to pay a fair dividend to the stockholders."

Railroad Earnings.

The following is a comparative statement of th business of the North Pennsylvania Railroad Company:

Earnings in May, 1860	$34,241 04
Earnings in May, 1859	31,215 77
Increase	$3,025 27
In first six months of fiscal year	$183,818 47
Same months last year	160,249 85
Increase	$23,568 63

The earnings of the New York and Erie Railroad for May, 1860, were. $416,888 10
Earnings, May, 1859 345,612 39
Increase $71,270 71

The receipts and expenses of the Central Ohio Railroad for April were as follows:

RECEIPTS.

Passengers	$15,425 94
Freight	23,710 69
Express	1,242 44
Mail	2,202 50
Total	$42,581 57

EXPENSES.

Transportation Department—		
Passengers	$2,891 84	
Freight	5,889 85	
	$8,781 69	
Machinery Department—		
Passengers	$2,590 44	
Freight	4,939 02	
	7,529 46	
Fuel expenses	2,886 08	
General expenses	1,655 35	
Road department	13,021 75	
	$33,874 33	

In addition to this sum, $1,062 30 was paid on account of construction department. Of the large sum placed to the road account, $6,882 50 was for repairs of track and road-bed, and $2,476 42 for road ties.

The amount due from other roads and local agents at the date of the report was $14,025 23. Amount in hands of Receiver, as stated in March report, $54,883 70; amount on hand April 30, $54,825 50.

The earnings of the New Orleans and Jackson Railroad for April were:

	1859.	1860.
From Freight	$39,175	$38,451
" Passengers	27,745	46,361
" Mails	3,466	6,200
Total	$70,386	$90,012

Increase $19,626—being a fraction over 25 per cent.

The transportation of cotton over this road for the eight months ending with April of this year amounted to 185,258 bales, against 139,674 bales for the corresponding period of the previous year—being an increase of 45,584 bales, or about 32 per

cent. The increase in the passenger travel for April, 1860, over 1859, is equivalent to 67 per cent.

The following is the May statement of the Baltimore and Ohio Railroad Company:

MAIN STEM.

American Railroad Journal.

Saturday, June 23, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

New York and Erie Railroad.

We stated last week that a decree had been obtained for the sale of this road in pursuance of the plan for the re-organization of the company. There appear to be no obstacles to its accomplishment. The Second mortgage bonds, however, are unadjusted. This fact undoubtedly exerts a very decided influence in depressing the value of the later securities, and stock. It is feared that some loss may yet be suffered in settling this matter. We think, however, that it need not necessarily cost the company a penny. In the first place, the holders of more than one-half in amount of the Second bonds, have virtually extended them for five years by accepting sheets of coupons covering this period. There is no doubt that nine-tenths of the holders of the balance could be made to do the same thing. An order for $200,000 of these bonds would, we are confident, put them very nearly, if not quite, to *par*. In such an event, a bond of the same class having 20 years to run, would command a premium. If a party should to-day commence the purchase of bonds, they would at once run up the market price so that the *new extended* bonds, which they might take in exchange, would immediately command a premium. Here is a way in which the present dilemma can be got rid of, and a handsome sum made by the operation. The large holders of the 3d and 4th mortgage should at once unite for this purpose.

The validity of the Second mortgage has been fully determined by our courts of law. All arrears of interest have been paid. No further default is anticipated. The First and Second bonds, amounting to only $7,000,000, are secured on a road cost,

ing $40,000,000. The rate of interest they bear is very high. Were the Seconds extended for 20 years they would be selling at an advance of 10 or 15 per cent. on their present prices. The whole matter might be wound up before the 1st of January next, by the adoption of the plan suggested, and giving notice, in proper time, that interest would be no longer paid on *unextended* bonds. So soon as the holders found that they could only get their money and interest, and no premium for the privilege of converting them into 3d mortgages, they would gladly exchange a security presently due, for one having 20 years to run. The influence would be most favorable on the securities, and place the company in a position of confidence and strength it has not for years enjoyed.

Western Railroads.

We have recently spoken of the substantial and gratifying increase of the traffic in Western railroads. Upon the Chicago, Burlington and Quincy and Illinois Central it has been much greater since the 1st January, than for any corresponding period since the opening of these roads. The Rock Island shows largely increased receipts over those of the previous year. The same may be said of the two Michigan railroads. The crop of wheat and corn, the past year, on the line of all the roads named was fair, and its movement shows itself in their increased earnings.

There has not yet been a corresponding advance in the stocks and securities of the companies named, owing, in part, to the uncertainty, at this early day as to the prospects for the forthcoming harvest. This at present is as favorable as could be desired. If realized, we shall see a rate of increase of earnings for the coming year in much greater ratio than the present over the past.

The two roads that have here shown the best results are the Chicago, Burlington and Quincy and Illinois Central. The earnings of the former at present are far in advance of 1857, when they went up to $1,600,000. The stock of the company has been considerably depressed by the diversion of nearly three years earnings toward the purchase of the bonds of the Peoria and Oquawka and the Northern Cross Railroads, for the purpose of securing favorable connections with those important roads. The purchases have been made and fully paid for, leaving the company out of debt, with accumulated earnings equal to 15 or 20 per cent. on its stock, and with every prospect of regular cash dividends hereafter. These purchases, which have been paid for out of the net earnings of the road, will in due time be returned to the stockholders, either in cash or bonds. This company was never in such a prosperous and fortunate position, which has been secured by a postponement, but without any sacrifice of the rights of the stockholders. During the suspension of dividends, they have been regularly earned. It has the trade of one of the best sections of the State; is more free from competition than almost any Western railroad; is managed with ability; is in the best condition, and has a far better prospect before it than when its stock was selling at a premium.

The Rock Island is another road greatly improved in its circumstances. This company postponed dividends for two or three years, for the purpose of entirely relieving itself of its floating debt, and of placing its road in good working condition. When the last dividend was paid, the company had not a dollar of floating debt, but a balance on hand for contingencies. The connections of this company are daily becoming more and more valuable. The Mississippi and Missouri Railroad will in the present season reach the heart of Iowa. The Illinois River and Peoria and Hannibal Railroad are rapidly extending the line of the Chicago and Rock Island to the central and southwestern portions of the State. There is every reason, therefore, to expect a very large increase in the earnings of this road over those for several years past. It has a very small bonded debt and can, for the future, apply the greater part of its earnings to dividends.

Chicago and Milwaukee Railroad.

The earnings of this road for the fiscal year ending December 31, 1859, were:

From passengers		$131,810 35
" freight		40,994 29
" express		2,570 13
" mails		5,691 92
" miscellaneous		2,033 72
		$183,100 41
Operating expenses		84,990 90
		$98,109 51
From which deduct:—		
Int'st paid on 1st mort. b'ds,	$35,455 00	
Do. 2d do.	18,402 62	
Do. income bonds	6,200 00	
Do. div. certificat.	5,499 96	
Do. floating debt, including discount and exchange	6,173 36	
	$71,730 94	
Taxes	4,670 13	
		76,401 07
Net result		$21,798 44

The balance, which shows a fraction over two per cent. on the capital stock, has been paid to decrease the indebtedness of the company.

Chesapeake and Delaware Canal.

From the forty-first annual report of this company, made June 4th, 1860, we learn that the receipts from tolls for the year ending May 31, 1860, amount to | $216,255 54
From other sources | 16,885 62
Total | $233,141 16
The contingent and incid'tal expenses, which include all items for repairs, salaries, wages, interest on loans, and all other expenses, amount to | 214,528 03
Leaving a surplus of | $18,613 13

This statement, compared with that for the year ending May 28th, 1859, shows an increase of net revenue of $12,207.36.

The canal is in excellent order. All necessary repairs have been promptly and faithfully made as required during the year, and there is no reason to apprehend obstructions to the navigation from any cause in the coming year.

Tolls received during year ending June 1, 1858	$207,005 90
Tolls received during year ending June 1, 1859	202,350 24
Tolls received during year ending June 1, 1860	216,255 54

Perth Amboy and Woodbridge Railroad.

A stockholders' meeting was held on the 9th, at which the following gentlemen were elected directors:—George Merritt, John R. Watson, E. Y. Rogers, James M. Chapman, Ellis Freeman, W. W. Mawbey and P. R. Hawley. This road, when built, will form a tributary branch to the New Jersey Railroad, with which it will connect at Rahway, and afford additional facilities to the people of Amboy to reach New York by land.

Tennessee and Alabama Railroad.

A meeting of the Directors of this road was recently held at Franklin, Tenn., which was attended by many friends of the road from other points, to consider the project of extending the road to a connection with the Mobile and Ohio, and the New Orleans, Jackson and Great Northern roads. The subject was thoroughly canvassed, and liberal propositions made to ensure its final success. The proposed extension will be about 87 miles in length, and will require $500,000 to grade the road. Of this amount, the Tennessee and Alabama Company agree to subscribe $200,000, and the balance, $300,000, it is proposed to raise in the counties along the line. The surveys have already been made.

Delaware, Lackawanna and Western R. R.

This company have declared a dividend of 6 per cent. for the six months ending June 30, which will be endorsed on the scrip about to be issued to provide means for the payment of the income convertible bonds heretofore issued. The company has also declared its intention to terminate the convertability of the outstanding $1,195,000 income bonds, and its readiness to pay them off when presented. In order to do this the company has resolved to issue a scrip stock to the amount of one-half its present capital, which is $3,931,800, upon which the present dividend is indorsed, equal to 12 per cent. as payment. The new stock will yield $1,720,000 to pay $1,195,400 of bonds, leaving $534,000 for other purposes. The interest on the income bonds will not be paid after December 1, 1860. The official announcements of this action were as follows:

OFFICE OF THE DELAWARE, LACKAWANNA AND WESTERN RAILROAD CO., No. 35 William St., New York, June 14th, 1860.

NOTICE.—A dividend of 6 per cent. for six months ending 30th June, inst., has been declared on the capital stock of this company, which will be indorsed on the scrip about to be issued to provide means for the payment of the income convertible bonds heretofore issued.

The stock transfer books will be closed from this date to the morning of July 5th.

By order of the Board of Managers.

A. J. ODELL, *Secretary.*

At a meeting of the Board of Managers of the Delaware, Lackawanna and Western Railroad Company, at their office, No. 35 William street, in the city of New York, on Thursday, the 14th day of June, 1860, the following Preamble and Resolutions were adopted:

Whereas, by a clause in the Income Convertible bonds of this company, the right was reserved to redeem the same at any time before their maturity, by paying the principle and interest due thereon, on giving notice to the holders thereof.

Now, therefore be it

Resolved, That the said Delaware, Lackawanna and Western Railroad Company now elect to pay the said bonds, and that the same be paid, together with the accrued interest thereon, on the presentation thereof to the Treasurer of this company at its office, No. 35 William street, New York.

Resolved, That this company will not pay inter-

est on the said bonds after the 1st day of December next.

Resolved, That this company give notice to the holders of the said bonds of the foregoing resolutions, by publishing the proceedings of this meeting.

OFFICE OF THE DELAWARE, LACKAWANNA AND WESTERN RAILROAD CO., No. 35 William St., New York, June 14, 1860.

In accordance with the action of the Board of Managers above stated, notice is hereby given to all holders of the Income Convertible bonds of this company, that they will be paid on presentation at this office, with the accrued interest thereon, and that the right of conversion ceases from this date, and that interest on the said bonds will not be paid after the 1st day of December next.

By order of the Board of Managers.

C. R. ROBERT, *President.*

A. J. ODELL, *Treasurer.*

European and North American Railway.

Statement of the Traffic Receipts on the Saint John Division for four months ending 31st May, 1860:—

	Passengers.	Freight.	Storage.
28th Feb.	£494 11 4½	£612 12 0	£1 0 0
31st March,	612 17 6	532 9 2	1 5 9
30th April	600 11 6	475 8 3	1 1 3
31st May,	774 10 3	607 10 10	1 13 0
Totals,	£2,482 10 7½	£2,228 0 3	£5 0 0

The total receipts from all sources being £4,715 10s. 10½. during the four months.

Bank of Tennessee.

The following is an extract from the official report of the Bank of Tennessee and branches, which are owned by the State:

To State bondholders, 6 per cents, due 1868		$1,000,000
Improvement and Education funds		2,679,068
Making a total capital of		$3,679,068
To State, for Treasury balance	$264,527	
And for Common Schools	376,663	
And for S. fund and profit and loss	199,667	
		837,775
Due to banks out of the State	$158,052	
Due to banks in the State	61,849	
		219,899
Circulation		1,196,863
Discount on State bonds		17,430
Individual depositors		957,333
Fund for purchase of State bonds		44
School fund bond		8,112
Total		$6,916,507
Discounted notes	$1,962,594	
Domestic bills	1,737,000	
Bills and notes in suit	781,707	
State bonds discounted	480,222	
Common School bonds	24,480	
Real estate	238,441	
		5,224,385
Branch balances	$113,109	
Due from banks outside of the State	563,661	
Due from banks in the State	19,469	
		696,230
Interest paid on State bonds		55,154
Robbery at Clarksville		17,885
Cash, viz:—		
Notes of other banks	$128,599	
Gold and silver	793,893	
		922,852
Total		$6,916,507

The bank is the fiscal agent of the State, and through the Merchants' Bank of this city pays all interest on the public debt of the State of Tennessee, without reference to the contingency of failure on the part of the railways to provide promptly on the State bonds loaned to them in consideration of a first mortgage lien of $10,000 per mile. This duty, however, is complied with by the companies at the bank in Nashville.

Commerce of Lake Superior.

We are indebted to Henry H. Hale, recently of this city, but now a resident of Ontonagon, Mich., for the following statement of the amount received for tolls on articles passing through the St. Mary Canal since its opening in 1855, to and including the year 1859:

1855	$4,374 66
1856	7,575 98
1857	9,406 74
1858	10,848 80
1859	17,361 53

The length of the St. Mary's Canal is about three-fourths of a mile. It has an average breadth of seventy-five feet, and a depth of eighteen feet.

Our informant states that the estimated valuation of copper and iron exported from the Lake Superior region in 1859 was $3,741,899.—*Buffalo Com. Adv.*

Covington and Lexington Railroad Bonds—The Injunction Dissolved.

On the first day of June an injunction was granted by a Kentucky County Court, forbidding the payment of the interest due on that day upon $17,000 of Third mortgage bonds of the Covington and Lexington Rai road, held by Mr. Henry Vallette, upon the representation that new testimony had been discovered in regard to the priority of the issue of the Income and Third mortgage bonds. The case subsequently came up for argument in the Fayette County Court, and after a brief consideration of the points presented by counsel, the injunction was dissolved, and the interest ordered to be paid. Mr. Vallette was ordered to give bonds for the amount, subject to the result of a trial in July next, when the facts involved in the original application for an injunction will be presented. The holders of some of the income bonds of the road claim priority over certain Third mortgages in dates of issue.

Lexington and Southern Kentucky Railroad.

This company was organized at Danville, on the 6th inst., Charles Caldwell, Esq., was elected President, *pro tem.*, Wm. J. Moberly, Secretary, and A. G. Gower Superintendent and Engineer.

The early completion of this road to the Kentucky river, to which it is already graded from Nicholasville, will insure its rapid construction to Danville via Harrodsburg, for then, Boyle, Mercer, Lincoln, and other counties, will be convinced of its success and inestimable value.—Thence its continuance to our southern border, so as to put us in connection with the South Atlantic and Gulf of Mexico, will be a fixed fact.—*Lex. Obs. & Rep.*

New Orleans, Jackson, and Great Northern Railroad.

At the last monthly meeting of the Directors of this road, a committee was authorized to make arrangements for laying the iron as speedly as possible upon that part of the extension of the road beyond Canton, of which the grading is under contract, and soon to be finished. It is stated that the exhibit of the finances of the Company ensures the punctual payment of the July interest on the bonds.

Sunbury and Erie Railroad.

We are informed that the Sunbury and Erie Erie Railroad Company will run their own road from Sunbury to Whetam, a distance of eighty-three miles, on and after the first day of July next. The intention of the Company is not to furnish the rolling stock, but merely to supply the motive power wherewith to haul the cars of the Northern Central Railroad Company. At Lock Haven commodious machine shops and depots have been erected. A sufficient number of locomotives are now building to accommodate the traffic. That portion of the Sunbury and Erie Railroad between Lock Haven and Sunbury is in excellent order. The western division, under the superintendency of Samuel A. Black, Esq., has been in efficient operation since the first of the year, and is doing a heavy freight business from the oil region of Pennsylvania. On the first of July next, the Sunbury and Erie Company will have one hundred and forty-nine miles of their own road in use, and with upwards of ten miles additional almost in working order.—*Pittsburg Post.*

Buenos Ayres and San Fernando Company Limited.

By the last mail from Buenos Ayres advices were received up to 28th March, announcing the arrival of Mr. Hopkins, resident director, who reports that arrangements are fully made for pushing on the works with the greatest activity, and that there is nothing to prevent the opening of the line to Belgrano, the second station from Buenos Ayres, in September next. The engineer appointed by the directors to superintend the construction of the line sailed from Southampton on the 9th ult., and has probably already arrived at Buenos Ayres. The ship "John Bunyan" sailed on the 9th inst., for Buenos Ayres with a cargo of sleepers and rails. The rolling stock has been ordered, and its construction is already commenced.—*London Railway Times.*

$500,000 EIGHT PER CENT. LAND GRANT MORTGAGE BONDS OF THE TEXAS AND NEW ORLEANS RAILROAD COMPANY (Texas Division), secured by a mortgage upon one hundred and six (106) miles of railroad and its appurtenances, of the estimated cost of $2,920,000, and upon seven hundred and sixty-eight thousand (768,000) acres of valuable land, are now offered to the public as one of the most desirable and reliable securities at present upon the market.

THIS ROAD

is the Texas Division of the great trunk line which, within twelve to eighteen months, will connect Houston, Galveston and every important point in Texas, with New Orleans, and, in communication with the lines running North and already completed, place New York within 90 hours of Houston.

THE BONDS

will be redeemable on 1st November, 1878, bear 8 per cent. interest; coupons payable semi-annually, on 1st May and 1st November, in the City of New York.

As additional security for prompt payment of the coupons, pending the completion of the entire road, are mortgaged by special trust-deed, 76,800 acres of land, together with town lots and individually donated lands, at present valued at $600,000.

Maps, prospectuses, copies of charter, trust deeds, land grants, and every information, may be had upon application to C. CONGREVE & SON, No. 6 Pine st.; or E. WHITEHOUSE, SON, & MORRISON, No. 38 William st., Merchants' Exchange.

11.	" 18 "		¾ to 1	23.	" 32 "		1 to 1
12.	" 18 "		1 to 1	24.	" 32 "		1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

SPERM, WHALE, LARD AND OTHER OILS,
For Railroads, Steamers, Machinery and Burning.

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.

TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the

EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

THE LAWRENCEVILLE MANUF'G

CEMENT COMPANY,

OFFICE 96 WALL ST,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing,

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE,** Secretary, 90 Wall st., N. Y.

ROSENDALE HYDRAULIC CEMENT.

American Railroad Journal.

PUBLISHED BY J. H. SCHULTZ & CO. No. 9 SPRUCE ST.

New York, Saturday, June 30, 1860.

Michigan Central Railroad.

The annual meeting of this company was held in Boston on the 25th inst. From the report of the Directors and Officers, which was presented, we learn that the earnings of the road during the fiscal year ending May 31, 1860, were:

From passengers		$803,507 97
" freight		962,621 70
" miscellaneous		66,815 19
		$1,832,944 86

And the operating expenses, including taxes, were:

Repairs of road	$206,766 86	
" buildings	40,954 21	
" locomotives	74,037 27	
" cars	76,906 69	
Locomotive service	37,119 24	
Train do.	36,125 00	
Station do.	270,244 91	
Fuel	117,276 65	
Oil and waste	22,935 74	
Stationery	15,216 55	
Operating telegraph	10,037 55	
State Tax	92,468 38	
Steamboat account	20,310 70	
Miscellaneous	57,083 76	
		1,077,483 51
Net earnings		$755,461 35

Compared with the previous year, the gross earnings from passengers and miscellaneous show a decrease of $156,371 05
With an increase in freight earn'gs of. 131,186 24

Making the decrease in gross earnings. $5,184 81
This, with an increase in expenses of... 4,750 63

Make a decrease in net earnings of $9,935 44

Another comparison is also instituted of the business of the past with the preceding year, by which it appears that during the months of June, July, August and September, there was a falling off, principally in passenger traffic, of $126,077.21; but which amount was recovered during the remaining eight months to within $5,184.81. The principal falling off in passenger earnings having occurred in the early part of the year, hopes are entertained that the minimum point has been reached, and that the ensuing year will show a favorable comparison with the one just closed.

The bonded debt of the company June 1, 1859, was		$8,184,488 89
Less sinking fund		64,800 32
Total net bonded debt		$8,119,688 57
Capital stock		6,057,840 00
Total		$14,177,528 57
The bonded debt now is	7,914,488.89	
Less sinking funds	160,427.10	
	7,754,061.79	
Add floating debt	90,781.71	
Capital stock	6,057,820.00	
		13,902,663 40
Total reduction of debt		$274,865 17

The gross receipts, as per Treasurer's report, for the year have been $1,852,473 17

Operating expenses	$985,015 13	
Taxes	92,463 88	
		1,077,484 01
Net receipts		$774,989 66
Amount paid during the year for interest, exchange, and discount on bonds sold to meet those matured, including $75,000 to sinking fund..		805,760 03
Amount taken from the balance of past year, standing to the credit of Income account		$30,770 37

The construction account has not been increased during the year.

It will be seen by the above statement, that the company, after meeting all operating expenses, paying $75,000 to the sinking fund, its interest, taxes, exchange, and discount on bonds issued to meet such of the bonds as matured in April last, was obliged to draw from the balance standing to the credit of income account, the amount of $30,770.35—thus reducing the balance to the credit of that account to $78,205.62.

The floating debt, amounting to $90,781 71, has been incurred in consequence of the unwillingness of the board to sell at less than par, the small remaining amount of bonds necessary to replace those which have matured and been paid.

The bonded debt, inclusive of the amount held by the trustees of the sinking fund, has been reduced $270,000. This reduction arises from the collection of a portion of the accounts and bills receivable held last year, and from the proceeds of the company's notes, forming the floating debt above alluded to. The proceeds of bonds to be sold, say, $85,511 11, with cash on hand and accounts receivable, will be more than sufficient to cancel the floating debt and also to pay the remainder of the bonds which matured April 1, 1860, say $21,000, not yet presented for payment. A further amount of $504,000 of bonds will mature 1st October next, to meet which the Company has a reserve of an equal amount of mortgage Sinking Fund bonds.

In order to place the different issues of bonds under the mortgage upon the same footing, a further sinking fund has been created, applicable to those issued to replace the bonds of 1860, which is rateably equal to the sinking fund originally provided, besides including the probable balance from said original sinking fund. Under these arrangements, it will be seen that the finances of the company are in a perfectly satisfactory condition, and that, the floating debt being practically extinguished, the net earnings may hereafter be applied to dividends. The road and property of the company have been well keep up, and considerable renewals and new permanent work done; among other things, 14 pile bridges have been entirely rebuilt, 18 arched and open culverts have been put in place of a like number of wooden structures; 40 miles of new fence have been built,

and other improvements have been made. One first class sleeping car, three drovers sleeping cars, and thirty-five combination freight cars have been built new; and thirty-six more of the latter nearly completed—all of which has been charged to operating expenses.

The equipment of the road consists of 98 locomotives; 70 first class, 12 second class, 31 third class, and three drovers sleeping cars; 23 baggage cars; 1,285 freight cars; and 251 gravel and other cars.

The number of miles run with passenger trains, was 582,638; with freight trains, 450,449; with working trains, 123,016—total miles run by locomotives 1,156,103. Total tons of freight moved during the year, 295,276. The whole number of passengers carried was 324,421½—of which 251,755 were way passengers; the latter yielding a revenue to the company, of $361,556 41. The number of through passengers was 72,666½, and the revenue therefrom $441,951 56.

GENERAL STATEMENT.

Vice President—H. H. HUNNEWELL.

Treasurer—ISAAC LIVERMORE.

Superintendent—R. N. RICE.

Sunbury and Erie Railroad.

Mr. Gay, Vice-President of the Sunbury and Erie Railroad Company, has selected a site for an engine house and machine shop, on Col. Cake's farm, just above the Sunbury borough line. The contractors commenced work on Wednesday, under Mr. Macklin, the Superintendent, and Mr. Foster, an engineer, and expect to have the turntable so far completed that it can be used on the 1st of July, when the Sunbury and Erie Company will resume possession of their road, and work it themselves. The Northern Central cars will be run through to Lock Haven, but the conductors, engineers, with their engines, and the employees generally, will stop at Sunbury, the terminus of the Northern Central road. The Catawissa trains will be stopped at Milton, and will be taken from that point by the engines of the Sunbury and Erie road, though it is said that the company intend to contest their right to run under their lease.—*Sunbury American.*

Minnesota and Pacific Railroad Company.

Having omitted to publish, at the time it was issued, the Second ANNUAL Report of this company, which was presented to the stockholders on the 22d of June, 1859, we have concluded to give at this time, a number of extracts from it—sufficient to show the position of the company at that time. The report says:

Since the last meeting of the stockholders the company has executed a deed of trust to Elon Farnsworth, Ex-Chancellor of Michigan, Edward P. Cowles, Ex-Justice of the Supreme Court of New York, and William H. Welch, Ex-Chief Justice of Minnesota, of its lands, roads, franchises, &c., to secure the payment of the bonds therein authorized to be issued.

It contemplates the issue of plain bonds of the denomination of one thousand dollars each, redeemable on the 1st day of August, 1883, bearing interest at the rate of seven per cent. per annum, payable semi-annually in the city of New York.

The issue is limited to thirty-five thousand dollars per mile. Companies of other States have mostly limited their issue to thirty thousand dollars per mile, but experience has proven that as a consequence they have been obliged before, or soon after the completion of their roads, to resort to a second, and sometimes to a third, mortgage, or have incurred a large floating debt which has in too many instances nearly produced their financial ruin.

To avoid the necessity of executing a second mortgage, or of incurring a floating debt, the trust deed authorized the issue and sale of an amount conceived to be ample to construct and equip the road, provide for interest and all contingent expenses; while if that amount should prove to be more than may be required, the power to issue to the utmost limit need not, and, of course, will not, be exercised.

The bonds are to be countersigned and registered by the trustees, and are to be issued only as the road is under contract and in course of construction in sections of forty miles.

They may be used in payment for lands. The lands are to be appraised, under oath, and copies of the lists of appraisals are to be furnished to the trustees. They may be sold by the company partly upon credit, and in such case, upon payment of a portion of the purchase money and the execution of a mortgage to the trustees to secure the payment of the balance, a complete title may be given to the purchaser.

The money thus accumulating in the hands of the trustees, is to be appropriated by them, first, to the payment of interest upon the bonds, and, second, to the payment or retirement from the market of the bonds themselves. These, in short, are the main features of the deed.

It was prepared with great care, and received the attentive consideration of the trustees, all of whom have occupied high judicial stations. One of them, (Ex-Chancellor Farnsworth,) has had much observation touching the operation practically of the land grant railroad system of the Western States, and other prominent roads of the country. His experience, combined with the legal knowledge and elevated character of himself and his associates, would seem to warrant the belief that the best interests of the bondholders, as well as of the stockholders, are abundantly protected so far as protection rests upon that instrument.

The deed was executed, of course, subject to the conditions and restrictions contained in section ten, of article nine, of the State constitution as amended, authorizing a loan of State credit to the several land grant railroad companies.

A difference of opinion arose between the Directors and the Governor of the State, respecting the construction of this constitutional amendment. The latter held that the company was bound to execute an exclusive first mortgage to secure the payment of $1,250,000 of the bonds to be issued to this company, so as to give the State a priority of lien upon the lands, franchises and property of the company over all other holders of the company's mortgage bonds. The Directors believed that the true intention of the constitution was to give the State no other preference over other holders of the company's bonds, than that secured by a conveyance to the State of two hundred and forty sections of land and the net earnings of the road. In this view the Supreme Court concurred.

It has ever been the policy of the Directors of this company to provide against a floating debt, and to have but one class of creditors, and that class to be bondholders, secured by one mortgage and having but one interest, for were there two classes, the interests of the one would certainly be hostile to the interests of the other, and thus one class of creditors might be sacrificed entirely, although the property were ample to secure both, provided their interests were mutual, as they would be if their securities stood upon the same footing.

With this policy in view, it was made known to the Legislature that inasmuch as the bill pending in that body did not contemplate a loan of more than twenty thousand dollars per mile, this company would not accept State aid if it were only to be had upon the terms of a first mortgage to the State, which many members at first seemed inclined to exact.

The question of a first mortgage was yielded by the Legislature on condition that each company should give the State a prior or exclusive lien upon the net earnings of its road, and upon two hundred and forty sections of land. To that extent the citizen bondholders do not stand upon an equal footing with her, and for this reason the Directors of this company with reluctance consented to modify their original policy.

The company conveyed 240 sections of land to the Governor, and also the net earnings of the road, by such proper instruments as met his approval, and having graded and prepared ten miles of road-bed ready for the superstructure, the company then tendered him one hundred thousand dollars of its first mortgage bonds, and demanded an equal amount of State bonds, which were refused. A proper application was then made to the Court for a *mandamus* directing him to comply with our demand, and after argument and deliberation, on the — day of December, the *mandamus* was granted.

But this procedure involved delays and occasioned discussions, and encouraged the original opponents of the loan to renew their warfare upon the measure, the companies, the Court and the Executive, to such a degree as thus far to have rendered the State bonds nearly unavailable for the purpose for which they were intended.

Before complying with the order of the Supreme Court, however, the Governor required the company and trustees to execute a supplement to the original trust deed, the principal feature of which is that in default of payment of interest to the State Treasurer, that should become due on the first mortgage bonds of the company, the Governor is empowered to demand an immediate foreclosure of the trust deed for the benefit of the State, and in case of neglect on the part of the trustees to foreclose, the Governor is authorized to do it.

It contains other provisions of a less important character, for the particulars of which you are referred to the instrument.

As neither the charter of the company nor the constitution empowered the Executive to make such a requirement of the company, as there was and could be no consideration to support the instrument, and as its execution was compulsory, it is questionable whether it is binding upon the conscience of the company, or has any legal force whatever.

There have been executed by the company and

countersigned by the trustees and registered by them, nine hundred bonds, five hundred of which have been exchanged with the State for State bonds, and three hundred and eighty-seven now remain on hand. Thirteen have been sold at their par value in payment of right of way in the city of St. Paul.

Of the five hundred State bonds which have been received by the company, fifteen have been sold, and four hundred and eighty-five have been paid to the contractor, Selah Chamberlain.

As yet no stock has been issued to subscribers. And none of the State Railroad bonds issued to this company have been used for banking.

With all these facts before capitalists, added to the vast amount of capital that has been nominally, if not actually, sunk in railways, they do not, nor can it be reasonably expected that they will, manifest any immediate anxiety to undertake, or furnish the means for, new enterprises, however desirable they may have been considered as investments two years ago.

The efforts, therefore, which have been made to induce them to undertake a speedy construction of the road of this company to the Red river of the North, have so far proved unavailing. The main efforts of the Directors have been constantly directed to this end. What results they may produce are yet in the future.

The report of the Chief Engineer shows that at mid-winter fifty-four miles of the road-bed of this company, including culverts, bridges and mechanical structures, were prepared for the superstructure; that sixty continuous miles are now nearly ready for the rail; and that the work remaining to be done, to complete 62½ miles for the iron, from St. Paul up the valley of the Mississippi, under Mr. Chamberlain's contract, will occupy about two months in its performance.

A sufficient number of cross-ties are at St. Anthony to lay the track from St. Paul to that place.

The Secretary's report shows the amount of outstanding warrants drawn upon the Treasurer by the President to be $41,709.07.

The report of the Treasurer shows that

he has received for capital stock	$53,470 00
Upon bills payable	30,450 00
Total	$83,920 00
And that he has paid out	83,913 68
Leaving a balance on hand of	$6 32

The Directors hope to have the road in operation between St. Paul and St. Anthony during this year. No efforts will be spared to effect it; and if the State bonds can be made available for the purchase of iron and rolling stock, it will be accomplished; and by the first of November, 1860, it is believed that 62½ miles will be in successful operation. To that extent only does the aid of the State apply.

By prudent management and strict economy, it is thought that that much road can be constructed without having recourse to a sale of first mortgage bonds.

The company will then be entitled to 230,400 acres of land, lying along the valley of the Mississippi river, extending from St. Anthony to Watab, where they will be at liberty to sell. With the proceeds of lands and the net earnings of the road, it is believed that the company will be able to discharge its obligations as well to the State as to others, and to be able to proceed with the extension of the road.

On the whole, although the company is affected seriously by the embarrassments prevailing throughout the State—partly by reason of the many circumstances which have combined to depreciate the standing and credit of the State bonds—still the Directors feel assured that these bonds will yet be available, and that their intrinsic value will become equal to that of the stocks of any other State in the Union. The condition of the company is, therefore, more satisfactory than could have been expected, and from the future there is much more to be hoped than to be feared.

We give also in this connection, the following statement made to the Legislative Investigating Committee, consisting of Hon. J. H. Stewart, Chairman of the Senate Committee, and Hon. G. R. Cleveland, Chairman of the House Committee on Railroads and Railroad Bonds:

OFFICE OF THE MINNESOTA & PACIFIC R. R. Co.
St. Paul, January 28th, 1860.

In pursuance of the joint resolution of the committee of which you are chairmen, respectively, "That a communication be addressed to the Presidents and Treasurers of each Land Grant Railroad Company in this State, asking what amount of First Mortgage Bonds their respective companies have issued and are now outstanding? To whom delivered, for what purpose or purposes? and at what price or prices the same were negotiated? and also a full and perfect statement under oath of the conditions and transactions of their respective roads since their incorporation until the day of such statement so certified as above to this committee;" I have the honor to refer you to my communication addressed to the Honorable Chairman of the Senate Committee under date of December 27th, 1859, and in connection therewith to submit the following statement:

The whole number of First Mortgage Bonds executed by this Company and countersigned and registered by the Trustees is 900, amounting to	$900,000 00	
Of these there have been deposited with the State Treasurer pursuant to law 625, amounting to	$625,000 00	
Sold to James M. Winslow, Esq., in payment of right of way, 13, amounting to	13,000 00	
Sold to Jesse M. Stone, Esq., for the charter of the Northern Pacific Railroad Company, 5, at 75 cents on the dollar, and amounting at par to	5,000 00	
Hypothecated in New York and Detroit with Hon. Elon Farnsworth, Hon. E. P. Cowles and Schuchardt & Gebhard, for salaries of Trustees, counsel and attorneys' fees, and cash borrowed (for in the aggregate $11,500) 85 amounting to	85,000 00	
And there remain on hand and now in possession of the company 172, amounting to	172,000 00	
Total		$900,000 00

The unfunded liabilities of the company it is impossible to state with entire accuracy, inasmuch as with the principal contractor there has been no settlement, nor indeed with either of them. But aside from what there may be ascertained to be due to them, there are outstanding notes, obligations and claims, exclusive of interest (a considerable portion of which are in suit and are being defended and the payment of others of which if sued will be resisted) amounting to the sum of $88,828 46

Judgment in favor of Philip Fox for	254 42
Judgment in favor of Michael McCabe for	177 39
Outstanding warrants	14,192 44
Estimated amount due for salaries of officers, trustees, state agent, counsel and attorneys' fees, etc., (for payment of $11,500 of which first mortgage bonds are hypothecated)	25,000 00
Claimed by the State for arrears of interest, for which the State has $25,000 of her own bonds	21,000 00
Due on estimate in favor of A. G. Frink, contractor	3,173 28
Total	$152,625 99
Deduct amount of State bonds withheld by the late Governor, and now in the hands of the State	25,000 00
Balance	$127 625 99

Subscriptions have been made to $1,301,160 of the capital stock of the company, and 5 per cent. paid thereon in cash, right of way, etc., amounting to $65,058,

The necessary right of way in the city of St. Paul, and also in the city of St. Anthony, has been mostly obtained and the title secured, together with the station grounds. A considerable amount of right of way and station grounds have been obtained, conditionally, at Stillwater. A considerable portion of right of way has also been secured or contracted for all along the line from St. Paul to Crow Wing; and through the military reservation of Fort Ripley, a distance of about 20 miles, the right of way has been confirmed to the company by order of the President of the United States.

On the 27th day of July, 1857, the executive committee entered into a contract, subject to the approval of the board of directors, with Selah Chamberlain, Esq., of Cleveland, Ohio, for the construction of a single track sub-grade railroad from Stillwater to Crow Wing, from Stillwater to St. Anthony at $22,000 per mile, and from St. Anthony to Crow Wing at $13,000. The work was to be commenced by the first day of October 1857, and the first division, from Stillwater to St. Anthony, was to be completed ready for a train of cars on or before the first day of September, 1859, and that portion of the first division between St. Paul and St. Anthony was to be completed ready for a train of cars on or before the 1st day of October, 1858, and thereafter the portion between St. Anthony and Crow Wing was to be completed at the rate of not less than 30 miles in each year.

Mr. Chamberlain commenced work in accordance with this contract on the 1st day of October, 1858, both at St. Paul and St. Anthony, and continued the same for about one month.

The financial embarrassments into which the whole country had been plunged led the company to inform him that there was but little hope of being able to make payments according to the the terms of the contract, and to suggest to him that the work, as well as the ratification of the contract, should be postponed, and to these suggestions he readily acceded.

On the 13th of April, 1858, the company made a new contract with Mr. Chamberlain for the construction of 60 miles of first class single track railroad, with all necessary side tracks, complete, including switches, frogs, chairs, spikes and iron rails weighing not less than 55 pounds per lineal yard, from St. Paul to St. Anthony, and thence up the Mississippi river, via Anoka, to Big Lake; to be completed ready for the rolling stock in two years from the 25th day of May, 1858; for which they were to pay him in State railroad bonds at their par value at the rate of twenty thousand dollars per mile, and in first mortgage bonds at their market value, at the rate of three thousand dollars per mile.

On the 23d of June, 1858, a supplement was added to this contract, by the terms of which Mr. Chamberlain was to extend the road 30 miles, terminating at St. Cloud or Sauk Rapids, for the sum of eighteen thousand dollars per mile, doing all the work and furnishing all the materials except the iron rail specified in the original contract. For this he was to be paid $250,000 in State railroad bonds at par, and the balance in cash.

The company were desirous of getting their road into operation from St. Paul to Stillwater as early as possible, and thence unite with the Hudson and Superior Railroad at some suitable point east of Stillwater, which latter road is now being constructed, and from twenty to forty miles of which will without doubt be in operation by the 4th of July next, and, therefore, the directors, having reason to believe that they could successfully negotiate their first mortgage bonds, (in which opinion the contractor fully concurred), on the 15th day of July, 1858, entered into a contract with Alexander G. Frink, Esq., of Philadelphia, "to construct and finish in the most substantial and workmanlike manner, to the satisfaction of the engineer of said company, a first class line of railroad from the east end at section one at Stillwater to the point of junction with the branch of said road to the Mississippi river at St. Paul,

(a distance of about 16 miles), including all the materials and work necessary to complete said road to sub-grade, viz: grading, masonry, bridging, timber, trestle work, cattle guards, undation, and of all other work not enumerated, necessary to the full and entire completion of said work." Beginning at Stillwater, five miles were to be finished on or before the 15th day of July, 1859, and the whole of said work by the 15th day of July, 1860, and for which he was to be paid $11,000 per mile.

Agreeably to the terms of this contract, Mr. Frink commenced work at Stillwater, and up to the 1st of February, 1859, he had expended, according to the estimate of the Chief Engineer, the sum of $3,173 28, which sum with interest is still due and unpaid.

When the contract was made with Mr. Frink it was believed that the State Railroad bonds would be disposed of and be made available in the hands of the companies and their contractors, at from 95 to 100 cents on the dollar, and that so soon as they had a market value the first mortgage bonds of this company might be safely offered in the market.

All efforts, however, to make the State bonds available having proved abortive, the first mortgage bonds were withheld from market, and Mr. Frink was notified that it would not be prudent for him to proceed under his contract until the financial condition of the company should have materially improved. Hence he suspended work.

The grading, bridging and mechanical structures pertaining to the road from St. Paul to a point opposite Monticello, having been nearly completed, and considering it of the first importance that a portion of the road should be put in operation at the earliest practical period, the directors and Mr. Chamberlain, by mutual consent, on the 13th of May, 1859, agreed to modify his contract so that he was to complete and equip the road from St. Paul to St. Anthony on or before the 1st day of January, 1860, and to have 62½ miles completed and equipped by the 1st day of November, 1860.

As will appear by a former report to the Senate committee 62½ miles are now ready for receiving the cross ties and iron, and ties are already furnished to supply the road from St. Paul to Anoka.

The State Railroad bonds loaned to this company have been rendered unavailable to the contractor, as he alleges, and hence his inability to comply with his contract as modified.

None of these bonds have been used for banking.

Although, considering the depressed condition of the country, the company have received a very large subscription to its capital stock, no certificates of stock have been executed nor, of course issued.

The "condition" of this company cannot be very well more fully described.

For more detailed information in respect to the "transactions" of the company, reference is hereby respectfully made to copies of the first and second annual reports of the directors to the stockholders of the company, and accepted by them, and to the report of the chief engineer, copies of which are herewith submitted; and also to the trust deed and the supplement thereto on file in the office of the Secretary of State.

All of which is respectfully submitted.

EDMUND RICE,
President Minn. & P. R. R. Co.

According to the third annual report of the company issued May 12th, 1860, but little progress has been made during the year towards putting the road in operation.

According to the report of the Chief Engineer it appears that "the entire work now completed consists of the location of the main line of road from Stillwater to the Bois des Sioux river, and the branch from St. Anthony to Crow Wing, and the preparation of that portion of the road from St. Paul to a point nearly opposite Clearwater, (a distance of a little over 62½ miles,) for the superstructure;" and, that "the earth work has withstood the action of the elements remarkably well, and a small expenditure will place it in as good condition as when first completed."

According to the report of the Secretary, the unfunded and outstanding liability of the company at this time, amounts to $94,888 55. This does not include any claim of the State.

There have been executed by the officers, and countersigned and registered by the trustees of the company, of first mortgage bonds		$900,000
Of these, deposited with State Treasurer	$625,000	
Hypothecated	85,000	
Sold to pay liabilities	31,000	
On hand	139,000	$900,000

During the month of May last, the contract then subsisting between the company and Mr. Chamberlain was modified by mutual consent. Mr. Chamberlain agreed to put the road into operation from St. Paul to St. Anthony on or before the first day of January last, and from St. Anthonny to a point extending 62½ miles from St. Paul on or before the first day of November next; to furnish the necessary rolling stock; to pay the then outstanding warrants drawn upon the treasurer; to pay the current expenses of the company; to procure the right of way, and to pay the interest upon the State Railroad bonds issued to the company, pending the life of the contract. He was to subscribe to $500,000 of the capital stock and pay 5 per cent. thereon, the payment to be made by a credit to the company after the final sum due him upon the completion of the contract; he was to select five of the fifteen directors and of the whole number none were to be changed except by his consent; and he was to receive the Minnesota State Railroad bonds of the company as soon as they should be obtained by the latter of the State.

He completed the grading of 62½ miles, and furnished ties sufficient for the tract to St. Anthony. He also redeemed the greater portion of the outstanding warrants and paid some other existing liabilities of the company as well as the greater portion of the current expenses up to the first of March last, when he gave notice that he was unable to pay any more. The company have literally complied with the contract on their part. Of course the most substantial and important obligations resting upon Mr. Chamberlain have not been fulfilled. No portion of the road has been put into operation, nor has the interest due upon the State Railroad bonds been paid by him; and he alleges that he is unable to proceed under the agreement until such legislation shall have been had by the State as will enable him to dispose of the State Railroad bonds paid upon the contract. Since your last meeting he has received $100,000 in State bonds, making in all $585,000.

The State claims that $21,000 is due for interest payable on the first day of December last.

Upon the completion of the 62½ miles of roadbed before mentioned the company applied to the then Governer of the State on the 28th day of September last for an additional issue of 25 State bonds. The work was examined by the State Engineer, who reported favorably upon the same, and twenty-five of the first mortgage bonds of the company were deposited with the State Treasurer. His receipt for the same, together with the report of the State Engineer were examined by the Governor and accepted by him as satisfactory.

It appears from his last annual message of the Legislature that he did not consider the railroad companies liable to pay the interest due upon the State bonds prior to the first days of December and June in each year. He had required the company, long before the application was made for the twenty-five State bonds, to enter into a stipulation with the State, in writing, that only one half of the State bonds, to which the company might become entitled, should be drawn upon account of grading, and the other half should be applied as the iron should be laid and the road put into operation. For what reason he withheld the State bonds has never appeared. The State Treasurer still holds the before mentioned twenty-five first mortgage bonds.

The State, then, committed the *first* default; and the question arises as to whether she is not bound to remove the default before she can enforce any remedy she might otherwise be entitled to receive as against the company. The administration of the five million loan measure on the part of the State thus far has proven anything but a success.

From the careful estimates, it is believed that your road can be put into effective operation from St. Paul to St. Cloud for the sum of $900,000. When completed to that point, the company will be entitled to the absolute ownership of 307,000 acres of land. Lying as it does along the valley of the Mississippi, on both sides, and within a very short distance of the numerous flourishing towns along the river, and being of a superior quality, an active demand for it would at once spring up, at prices ranging from $3 to $12 per acre. The astonishing increase of population along this valley, and the valley of the Sauk river, during the past two years, can hardly be credited by those who have not actually observed it. The increase of productions, and especially wheat, has been still more enormous. No one familiar with the localities can doubt that there would be sufficient business for the road, if completed to St. Cloud, to pay the interest upon the cost and keep up proper repairs.

The officers for the present year, are:

President—EDMUND RICE.

Directors—R. R. Nelson, Franklin Steel, Dwight Woodbury, Henry T. Welles, Edmund Rice, Benjamin Thompson, John S. Prince, J. P. Burton, Daniel Wells, Jr., E. Caldwell, Wm. B. Shute, Jr., D. C. Shephard, T. M. Metcalf, Joseph Chamberlain.

Secretary—T. M. METCALF.

Treasurer—E. CALDWELL.

Chief Engineer—D. C. SHEPHARD.

Journal of Constitutional Law.

POWER OF GOVERNOR TO SIGN BILLS AFTER THE ADJOURNMENT OF THE LEGISLATURE.

An important decision has been rendered by the General Term of the Supreme Court of the State of New York, in the first judicial district, in which it is decided that the Governor has no power to sign bills passed by the Legislature after its adjournment; the constitutional provisions, operating as an inhibition upon the right of the Governor to approve and sign, as well as a protection to his right, to return it with his objection.

The importance of this decision, especially if it should be affirmed by the Court of Appeals, is very great. Scarcely a legislature adjourns without leaving many and important bills unapproved by the Governor; and if a bill passed by the Legislature, but not approved by the Governor until after the adjournment of the Legislature, is not, owing, to this defect, to be considered a law, then many bills which have been heretofore deemed and acted upon as laws, are not laws, because of their unconstitutional enactment. The decision is based upon the proposition that the Governor is a part of the law-making power of the State. Each of the three constitutional powers must be consulted in order to make laws, and each power acts as a check upon the other in presenting improper legislation. Hence, says the learned justice who delivered the opinion of the Court, the conclusion, to my mind, is quite apparent, that all the law-making power of the State must be in a condition for present action whenever any bill becomes a law.

The case came before the General Term upon an appeal from a judgment of special term. The following is the opinion of the Court.

LEONARD, J.—The principal question upon which the determination of this case depends, is

the authority of the Governor to approve and sign bills which have been passed by the Legislatures after their adjournment.

This subject is regulated by article four, section nine of the Constitution, and upon the true construction and effect of the last paragraph of that section the whole case depends.

The section reads as follows:

"Every bill which shall have passed the Senate and Assembly, shall, before it becomes a law, be presented to the Governor; if he approve, he shall sign it; but if not, he shall return it with his objections to that house in which it shall have originated; who shall enter the objections at large on their journal, and proceed to reconsider it. If, after such reconsideration, two-thirds of the members present shall agree to pass the bill, it shall be sent, together with the objections, to the other house, by which it shall likewise be reconsidered; and if approved by two-thirds of all the members present, it shall become a law notwithstanding the objections of the Governor. But in all such cases, the votes of both houses shall be determined by yeas and nays, and the names of the members voting for and against the bill shall be entered on the journal of each house respectively.

"If any bill shall not be returned by the Governor within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the Legislature shall, by its adjournment, prevent its return; in which case it shall not be a law."

No bill can become a law without having been first presented to the Governor. He is thus a constitutional part of the law-making power of the State. While the Legislature are in session, it is his duty to sign any bill presented to him, or to return it with his objections within ten days. If he omit so to do, he loses his prerogative, and the bill becomes a law. While his duty is clearly defined in this respect, he is prevented, with equal precision, from capriciously interrupting the progress of legislation.

On the other hand, the Legislature cannot deprive the Governor of the exercise of his prerogative by a hasty adjournment within the time allowed him for considering and signing, or returning bills with his objections.

What is the contingency in which a bill shall not become a law? It is, as I understand the provision, when the Legislature have passed a law, and presented it to the Governor, and have then adjourned within ten days, and before the Governor has signed the bill or returned it with his objections. When the Legislature are in session, if he approve, he shall sign any bill presented to him within ten days; or if not approved, he shall within the same time return it with his objections; if he omit to sign or return it within ten days it shall be a law notwithstanding his neglect; if the Legislature adjourn within ten days after the bill has been presented to the Governor, and before he has signed or returned it with his objections, it shall not be a law.

If the construction demanded by the respondents be allowed to prevail, then there is no time fixed by the constitution when a bill which has been passed, and presented to the Governor within ten days before the adjournment of the Legislature, and not acted on by him, may not, at the will of the Executive, become a law. If the Governor may sign a bill one day after the adjournment of the Legislature, and cause it to become operative as a law, he may also sign and cause it to become a law five years after the adjournment. Such a contingency seems so absurb, that it only requires to be stated to rebut the presumption that the construction insisted on could ever have been the intention of the framers of the constitution. A bill becomes a law in ten days without the Governor's signature, when the Legislature are in session, by the express provision of the constitution. No one claims, however, that a bill may become a law after the Legislature adjourn, without the signature of the Governor, after the lapse of ten days from the adjournment, or any other length of time.

Had the constitution not directed that every bill, before it becomes a law, shall be presented to the Governor, and imposed upon him the duty of considering it for wise purposes, it might be urged, with controlling reasons, that he does not constitute any part of the law-making power of the govern ment. True, no part of the duties of legislation is vested in him. He does not originate or control the the action of the Legislature. There is no clause authorizing him to prorogue, but he may summon a meeting of the Legislature, when public emergencies require it. He has not authorized to make laws without the assistance of the Legislative bodies, nor can those bodies do so without the Governor.

Each of these three constitutional powers must be consulted in order to make laws, and each power acts as a check upon the other in preventing improper legislation.

Hence the conclusion, to my mind, is quite apparent that all the law making power of the State must be in condition for present action whenever any bill becomes a law.

When the legislature have adjourned, the law making power, for the time, has terminated.

An adjournment of the legislature within ten days after a bill has been presented to the Governor, in case he has not then signed or returned it, pre vents its return, and in that "case it shall not be a law."

This construction operates as an inhibition upon the right of the Governor to approve and sign, as well as a protection to his right to return it with his objection.

It gives full effect to the provision of the section in question, and not a limited and restricted operation, by confining the scope of the last paragraph to the case, only, of such bills as the Governor does not approve.

I cannot conclude without expressing my deep sense of the importance of the subject under cou sideration.

The length of time during which the practice of several eminent governors of the State has, as I am informed, sanctioned the usage of signing bills after the adjournment of the Legislature, and the large number of laws, and the pecuniary interests dependent upon the true construction of the constitution in this respect, and the very learned and able opinion of my associates from whose decision this appeal has been taken, have occasioned me much reluctance and hesitation in arriving at an adverse conclusion.

No instance of the exercise by the Governor injuriously to the true interests of the public of the authority claimed, to sign bills after the adjournment of the Legislature, has been brought to the notice of the court, and it is not believed that any such instance has ever occurred. It is, however, vitally important that no loose or latitudinarian construction of the fundamental law should exist or receive the support of the tribunals, whose duty it is to preserve that law in its orignal vigor and harmony.

This last consideration is paramount. I am therefore compelled to declare my opinion to be that the judgment of the Special Term ought to be reversed.

I am the more contented in declaring my decision adversely to the judgment rendered at Special Term from my belief that the Legislature, at its next session, will, and ought to confirm all acts which have been heretofore signed by the Governor after the adjournment of the Legislature, since the practice has not, as far as known, resulted in any public injury, and such vast consequences are depending.

Passenger Railroads in New Orleans.

The purchasers of the right of way for city railroads in this city have organized a corporation with a capital of one million of dollars to carry out this great work. The stock of the company was promptly taken by a few capitalists, and without solicitation or canvassing. The company will hold the right to twenty four miles of railroad, and with their abundant resources will proceed to lay down the whole extent of their contract as rapidly as possible.—*N. O. Delta.*

Chicago, Burlington and Quincy Railroad.

At the annual meeting of stockholders of this railrond company, held June 22d, 1860, the fol lowing persons were elected Directors for the ensuing year, viz: John Van Nortwick, Batavia, Ill.; Chauncey S. Colton, Galesburg, Ill.; James F. Joy, Detroit, Mich.; Erastus Corning, Albany, N. Y.; John M. Forbes, John W. Brooks, Samuel R. Spinney, Robert S. Watson, William Boott and Henry P. Kidder, Boston, Mass.; and Edward L. Baker, New Bedford, Mass.

Foreign Postage.

The following notice has been issued by the Postoffice Department:

PREPAYMENT OF POSTAGE BY STAMPS.

"The recent order of the Post Master General, requiring the prepayment of postage to be made in all cases by United States postage stamps, is said to have been misunderstood by some Post Masters, as compelling the prepayment of postage upon all letters and other mail matter addressed to foreign countries."

We are, therefore, requested to correct any misapprehension on this subject, by stating that the purpose of the new regulation, as is therein clearly expressed, is simply to require prepayment by postage stamps, instead of in money, in all cases when postage is prepaid in the United States, leaving it, as heretofore entirely optional with the senders to pay the postage in advance or leave it unpaid when mailing letters for Canada or other British North American Provinces, Great Britain, Prussia, France, Belgium and the German States, by the Bremen or Hamburg mails, as our postal arrangements with each of those countries have adopted the principle of optional prepayment. The new regulation referred to is in the following words:

"From and after the 1st of June, 1860, the postage upon all transient printed matter, foreign and domestic, and upon all letters, foreign and domestic, must be fully prepaid by United States postage stamps, except in cases where prepayment on letters, &c., to foreign countries is optional, and the senders do not wish to prepay."

Hoof-Plate and Gum-Cushion for Horses Feet.

Mr. Thomas M. Coleman, chief of the corps of reporters of the *Public Ledger*, has patented a contrivance, comprising a permanent plate attached to the hoof, between which and the ordinary shoe a strip of elastic gum is interposed, to receive the shock which attends the striking of the horse's foot against the cobble-stones. The invention is thus described in the *Ledger:*

A Valuable and Useful Invention—Important to Passenger Railroad Companies.—Mr. Thomas M. Coleman, of this city, has just received letters patent for a valuable improvement in the construction of horse shoes. It is well known that horses traveling over the paved streets, particularly those attached to passenger railroad cars, hacks, private vehicles, &c., are continually receiving injuries to their legs and hoofs, by the constant jar, caused by trotting over the stones. Young horses in a few months are lamed and many of them entirely ruined, except for use on farms and common roads. The improvement made by Mr. Coleman is designed to render the travel over paved streets as easy to horses as if they had soft ground beneath their hoofs. This object is obtained as follows: A thin plate of steel or iron is constructed to fit the hoof, and then the ordinary shoe. Between this plate and the shoe a strip of gum elastic or other equivalent substance is placed, and the three securely riveted together. To allow of the fastening of the plate to the hoof, and to give the gutta percha elasticity, without loosening the nails in the hoof, pieces are taken from the side of the lower shoe, which permits the heads of the nails to pass up to the plate, and thereby hold it

securely to the hoof, while the shoe and gum are held to the plate by the rivets put in before nailing it to the hoof. The plates when made will last for years, as they never touch the ground; and those using them upon their horses can, by having duplicate plates, always have shoes ready for their horses, which can be put on in a few minutes. The advantages of the shoe are that the gum between the plates will absorb all the vibration caused by the shoe striking the stones; hence there will be no jar to the horses' legs—thereby preventing all injury. The cost for shoeing, after the plates are first made, will be no greater than by the ordinary mode; while the advantage, in the opinion of the inventor, will save thousands of dollars to those who own large numbers of horses.

Philadelphia Car Wheel Works.

We copy the following interesting description of these Works from the Philadelphia *Inquirer*:

PHILADELPHIA CAR WHEEL WORKS—ASA WHITNEY & SONS.—This establishment was founded by the senior member of the firm, Mr. ASA WHITNEY, who, in 1847, with his son, Mr. GEORGE WHITNEY, began the manufacture of car wheels, at a small foundry in Willow street, below Thirteenth. He remained here about five years, adding to the firm two other sons, Mr. John R. Whitney and Mr. James S. Whitney. In 1852, the Willow street foundry being too small for the increased business, the present works, on Callowhill street, were commenced. They occupy the square of ground, 400 feet by 200 feet, extending from Callowhill street to Pennsylvania avenue, and from Sixteenth street to Seventeenth street.

At first the buildings consisted of a foundry on Pennsylvania avenue, 250 feet by 60 feet, with a wing 132 feet by 40 feet, running from each end to Callowhill street, and an office on the latter street 50 feet by 40 feet. In 1856 the demand for car wheels had so greatly increased that, while this firm were making 150 wheels per day, they were forced to decline orders, for want of room to fulfil them. They then extended the foundry to Seventeenth street and erected another wing on that street. This alteration gave them a clear casting room of 350 feet in length, with 50 feet at the end for the storage of coal and the entrance of a track connecting with the Reading Railroad, of which Mr. Asa Whitney is now the President. The wing on Seventeenth street contains the water closets, wash-room, blacksmith shop and storage room. The ground floor of the shop on Sixteenth street contains the pattern shop and lumber room, and in its basement are stored sand and charcoal. At the centre of the junction of each wing with the main building there is a handsome chimney 120 feet high, fluted throughout the whole length, and surmounted by an ornamented brick work capital, on which rest a cast iron top, 14 feet in diameter and weighing five and a-half tons. All the buildings are fire proof, and are covered with corrugated metallic roofing with iron rafters, purlines and tier-rods, on a plan invented by Mr. Asa Whitney, and executed at these works.

The peculiar process of making wheels at this establishment is the invention of Mr. Asa Whitney, patented by him April 25th, 1848. It consists in taking wheels from the moulds as soon as they are sufficiently solid to bear handling, and putting them into ovens previously heated to about the same temperature as that of the wheel when put in. All parts of the wheel are thus brought to the same temperature, and cooled slowly and uniformly, the heat in the ovens escaping only by radiating through a brick wall four inches thick and an iron casing one-eight of an inch thick. The necessity for such a process arises from the fact that the "tread" of the wheel, that part which, in running, comes into contact with the rails, requires an extra hardness to resist the friction of the brakes and rails. This is secured by "chilling." For this, the edge of the "flask" or mould is made of iron, while the rest is of sand; iron being a good conductor of heat, cools the liquid metal suddenly, and thus throws the edge into a hard white crystal. Sand being a poor conductor, gives off the heat slowly from the rest of the wheel, and the shrinkage which occurs as the liquid metal solidifies, must take place towards the edge or rim, which has already become set. This produces an inherent strain which would tear apart a wheel allowed to cool in the open air. Formerly this strain was partially overcome by cutting the hub open in three places, and, after cooling, banding it with wrought iron. By the "annealing" process, a prolonged cooling in which all the parts of the wheel cool alike, this strain does not occur.

The "chilled" edge of the wheel is not injured by the heat of the ovens; for, as this "chill" occurs at the moment the liquid iron enters the solid state, no temperature less than such as would begin to melt it again can afterwards soften it and destroy its solidity.

The "annealing" kilns, being patented, are the only ones in existence for such purposes. By this process the full strength of the iron is secured, as may be seen by specimens in the yard of the Works. Wheels cooled in the open air broke in several places by their own contraction in cooling. Wheels of the same pattern, made of the same kind of iron, cooled by the "annealing" process, were put in a lathe, and grooves were cut out of each wheel until not more than one-twentieth of the whole thickness of the wheel was left at the bottom of the cut, but there was no internal strain in the wheel to break the remaining thin shell. The spokes of wheels cooled in the open air were mostly broken off from the rim, while those which had been "annealed" had been cut nearly off by a large drill, without exhibiting any signs of fracture. In the manufacture of car wheels, this system exceeds all others as regards strength, durability, lightness, uniformity and economy.

There are five cupola furnaces, three of six feet in diameter, and two of forty-four inches in diameter. The two smaller ones are used for mixture of metal for special purposes. The cupolas are blown by two blowing-cylinders of forty-four inches in diameter and forty-four inches stroke, which force the air into a reservoir, from which it is let into any or all of the cupolas, as required.

The coal and iron are weighed in iron boxes on wheels, each box containing sufficient for one "charge" of the furnace. These boxes are raised to the "charging floor" in front of the furnaces by a hoisting apparatus, worked by steam. Slow melting is desirable for car-wheel iron. Ten varieties of iron are sometimes used in a single wheel, each kind possessing some essential advantage of strength, hardness, fusibility, or capacity for "chilling." The regular wheel mixture averages about forty tons a day. As the melted iron runs from the cupola-furnaces, it is caught in a large ladle, lined with fire-brick, holding fifteen tons. It is then poured by a screw-gearing driven by belting from the main line of shafting, into the smaller ladles, each holding sufficient iron for one wheel. These small ladles are on wheels, so as to be easily drawn by one man to the traveling cranes, which run on tracks the whole length of the moulding room. On both sides of these tracks are rows of "flasks" for moulding the wheels.

By these cranes the ladles are hoisted, and the metal is poured into the moulds. After a few minutes the flasks are uncovered, and the wheels are taken out on a small track to the "annealing" ovens, where they are left three days to cool.—The wheels are lowered into the ovens, and hoisted out again by hydraulic cranes. These are worked by an engine and double-acting pump which force the water into a reservoir at a pressure of 300 pounds to the square inch.—Pipes carry this water to the cranes, which are easily managed by one man. By opening or shutting valves the water is let into, or shut out of, another cylinder where it moves a piston which carries with it the chain which lifts or lowers the wheels. By means of other valves the cranes are turned upon their centres so as to reach the different ovens.

When the wheels are taken out of the ovens they are thoroughly cleansed, tested, and assorted in sizes, so that those of the same circumference shall be put together upon axles. They are bored and forced upon the axles in the machine shop. No key or spline is used to keep the wheels upon the axles, but being forced on at a pressure of from thirty to forty tons, they are kept there by the accuracy of their fit. This accuracy is secured by using Whitworth's celebrated standard gauges for all measurements in this establishment. In this way any number of wheels and axles may be bored and turned, so that any wheel will fit any axle but with certainty. A small crane is attached to nearly every lathe and boring mill, and thus every piece of metal is lifted to its place by one man. The wheel is bored, squared, and the edge of the hub chamfered, at one operation. All iron is assorted and mixed, and the quality of the mixture carefully tested, as regards strength, hardness, depth and soundness of "chill," by "trial pieces" or "test pieces" which are broken in a testing machine, and the pressure at which they break registered. The wheels are tested at every point in the "thread and in the "plate."

All over these works the visitor is struck by the remarkably systematic arrangements. Each workman is assigned a special place and a special duty, and he must be ready the moment he is needed. If he is unoccupied a moment, he does not leave his place to assist others, but rests till he is required. There is no confusion, excitement, or unnecessary noise. No man interferes with another, and thus more time and strength are gained than are lost by occasional resting. About 100 men are now employed here. But this is not an accurate criterion of the extent of the business, for everything is most wonderfully simplified, and everything but the mere handling of ordinary tools is done by machinery. About 150 wheels are made daily. These are sent to all parts of the United States, to Cuba, and even to Europe.

Cleveland and Pittsburg Railroad.

This road has been placed in the hands of a Receiver by order of the Circuit Court of the United States for the Northern District of Ohio, at the suit of M. W. Baldwin & Co. J. N. CULLOUGH, the President and Superintendent of the company, has been appointed Receiver. The claim of M. W. Baldwin & Co. is for locomotives furnished the the company in 1857, and amounts to about $122,000, no part of which has been paid. The Cleveland *Herald* says:

The financial difficulties of the company arising from a large floating debt, are such that it was impossible for the company, with the outside pressure upon it for payment, to be kept any longer out of the hands of a Receiver appointed by the Courts of Ohio, or a Sequestrator appointed by the Courts of Pennsylvania; and as the laws of Pennsylvania in regard to the appointment of sequestrators of insolvent corporations were passed before the public had become acquainted with the uses, necessities, and manner of operating railroads, and are in no respects adapted thereto, there is no doubt but that it was much better for all the parties interested in the railroad company, whether as bondholders, general creditors or stockholders, that the road should go into the hands of a Receiver instead of a Sequestrator.

Fredericksburg and Gordonsville Railroad.

A meeting of this Company was held in this place on the 15th. The old board of directors were continued, viz: P. Goolrick and C. C. Wellford, Esqs., on the part of the stockholders, and, until a new appointment, A. K. Phillips, O. M. Crutchfield and John H. Lee, Esqs., on the part of the State. Mr. Moore, of Orange, was re-nominated and unanimously elected President.

Reports were made by the President and by the Chief Engineer, C. M. Braxton, Esq., giving an expectation amounting almost to a certainty, that this much desired road is now in a fair way to be finished. We really desire, in common with the whole community, to see the improvement fully developed, and we hope soon to see a corps of laborers actually at work on the road.—Begun once

again, we fear no more obstructions, as our people seem lately to have taken upon themselves new energy and fresh enterprise.—*Fredericksburg Herald.*

Panama Railroad.

The following is the official statement of this company for the past six months:

EARNINGS.

Net amount received after deducting commissions, exchange, etc.		$723,315 59
Ascertained and in process of collection		29,776 65
For which returns have not been received from San Francisco and the Isthmus, estimated		54,000 00
Due from United States Government for mail transportation from Jan. 1, to June 30		50,000 00
Total		$857,092 24
From which deduct interest on bonds, with exchange and commissions	$91,998 11	
Disbursements in New York and on the Isthmus, connected with the running and repairs of the road	236,295 19	
Expenditures for new iron, freight cars, permanent improvements, wharves, water works, etc.	46,583 25	
New Granadian Government proportion mail receipts	5,000 00	
		379,875 55
Total		$477,216 69
Dividend on $4,976,000, at 6 per cent.	$298,560 00	
New Granadian Government, 3 per cent. on do.	8,956 80	
Appropriated to Sinking Fund	50,000 00	
		357,560 80
Surplus on six months		$119,699 89

Columbus and Indianapolis Railroad.

In 1851 and 1852, railway companies in Indiana and Ohio commenced the construction of roads between Indianapolis and Columbus. That in Indiana was to run eastward to Union City, (84 miles,) at the State line. That in Ohio to run westward from Columbus (through Urbana and Piqua) to the same point, 102½ miles. In 1852, the two companies, by solemn compact, united both roads into *one through line* from city to city. This compact of record in the books of both companies, formed "The Columbus and Indianapolis Railroad Line."

It was provided that the operation of the line should commence "as soon as both roads should be completed to Union City."

The Columbus, Piqua and Indiana Railroad Company having failed, in 1855, to raise means to complete the road further than Piqua, or to pay the interest on their bonds, the creditors instituted proceedings to foreclose their mortgage, and very soon thereafter it passed into the hands of Receivers. These officers operated the road, merely keeping the property in a condition to be passable, and without the means to do much more, while the litigation was slowly progressing in the courts. In the winter of 1856-7, it became, as was then thought, a matter of much importance to Indianapolis that the road should be completed, and brought into line with the road from Union westward, so as to form and complete the long before contracted railroad line from Columbus to Indianapolis, as provided for at the inception of both roads, in 1852. During the period between 1854 and this time, the Indianapolis and Bellefontaine road (the 84 miles between Indianapolis and Union City) had changed its name to "The Indianapolis, Pittsburg and Cleveland Railroad," and had formed a running connection with the Bellefontaine and Indiana Railroad, in Ohio, to Galion, thus forming a line from Indianapolis to Galion, known since as "The Bellefontaine Railroad Line."

This agreement, however, made by the Indiana road (I., P. & C.) for the Galion connection, was expressly made subservent to the contract and arrangement, so previously (in 1852) made with the Piqua road for the opening and operation of the Columbus and Indianapolis Railroad line.

In the spring and summer of 1857, the stockholders of the Indianapolis, Pittsburg and Cleveland road, at Indianapolis, began to interest themselves very much for the completion of the Columbus line, and after much consultation with many interested in Ohio, the present manager of the road, John H. Bradley, of Indianapolis, was agreed upon by all, as the proper person to unravel the entanglements, and produce the completion of the road, and was induced by his interests in Indianapolis, and his wish to have the benefits of the line availed by that city, to undertake it. The Indiana Board of Directors joined actively in the effort, and themselves paid the expenses of Mr. Bradley's visit East, all indeed that he ever was paid, he not having asked any personal compensation.

After much negotiation, and having met and overcome scores of objections and difficulties, Mr. Bradley suggested to, and obtained the consent of nearly every person East and West, to a plan by which the road could be completed. The arrangement was presented to the court in which the suit was pending, received its approval, and without objection by any party, and by common consent, was made an order and decree of the court in the cause.

By this arrangement, new Receivers were to be named by the bondholders, and means to complete the road were to be raised on credits, having the whole road as their security, with priority over *all* mortgages; the mortgage creditors all agreeing to stand back, and let such creditors have a lien before them.

Receivers were according chosen, large bondholders under the first and second mortgages, and they not being either skilled in building or operating railroads, or willing to give any personal attention to those matters, induced Mr. Bradley to act as their agent, and manage the whole matter, although such a position was in no respect contemplated by him at the time he undertook the negotiation for the compromise.

He proceeded at once to purchase iron and make other arrangements for building the 30 miles west of Piqua. He assumed the position on the 1st of October, 1858, and by the 1st of December, the track-laying was commenced—and winter as it was—by the 25th of March following, the grades was adjusted, the bridges put in repair, 70,000 cross ties hewed from the trees, the iron and other materials brought here and laid down in track, and trains were running from Columbus to Indianapolis.

The track from Piqua to Union City, 30 miles, cost about $190,000. Four new locomotives, 21 freight cars, and 2 passenger cars were purchased, the whole construction and new equipment costing about $235,000.

Since the road opened in April, 1859, there has never been an accident to a passenger, nor a car wheel off the track. The trains have been run with a regularity unexcelled anywhere. The length of road is 102½ miles. Two passenger trains are ran each way every day, and one freight train daily each way, which also carries with it a passenger car for the accommodation of way passengers. The average ordinary expense of operating the road is about $6,400 per month, which includes everything ordinarily expended for labor, material and repairs. During the past winter the long bridge over the Miami river, has been wholly rebuilt, and the bridge over Mad river, near Urbana, is now being rebuilt.

Since the completion of the road, it has never had a fair and general support at the western end of the line. The control there, has nearly always, wholly or in part, been subject to the interests of parties on the Galion route or at Cleveland. They look upon the Columbus route as one detrimental to them, and have not permitted the Indiana interest to do this road justice. Notwithstanding this, it has, by ceaseless energy, labor and economy, gradually won its way into favor in the West, and toward success, and is beginning to be acknowledged, as it eventually will be fully, to be one of the best, if not the very best, routes for passengers and for freight connecting the routes East and West.—*Columbus Gazette.*

Morris and Essex Railroad.

The annual meeting of the Morris and Essex Railroad Company was held at Newark, June 14. The annual report of the Directors shows the company's affairs to be in a highly prosperous condition, with a largely increased business—the travel between Orange and Newark alone being increased during the last year upward of one hundred and fifty thousand passengers. The contract with Mr. Stevens, for the extension to Hoboken, is stated to have been perfected, and preliminary arrangements made for the completion of the work; but as the present contract with the New Jersey road extends to 1863, it is not probable that it will be in operation under three years. The old Board of Directors were re-elected. A resolution was also adopted to extend the road westward from Hackettstown, its present terminus, to Philipsburg or Washington, at the discretion of the Directors, provided it will not impair their present agreement with Mr. Stevens. If this suggestion is carried out, it will give the road an outlet at both sides of the State, if the Hoboken extension is to be also completed. The general account is as follows:

Capital stock		$1,157,800 00
Funded debt		340,000 00
Contingent fund		268,434 88
Total		$1,766,234 88
Cost of road, buildings, engines, cars and machinery		$1,622,556 06
Capital stock of Telegraph Comp'y.		2,000 00
Capital stock of Newark and Bloomfield R. R. Co.		55,000 00
Wood on hand paid for		4,500 00
Cash and cash items		82,172 82
Total		$1,766,234 88
INCOME TO DECEMBER 31, 1859.		
From passengers		$146,588 66
" freight		100,203 94
" mails and sundries		8,443 75
Total		$255,236 35
EXPENSES.		
Repairs of road, bridges, build'gs, &c.		$45,168 76
Repairs of engines, cars and machin'y.		28,751 88
Wood, oil and waste		19,241 33
Operating road and transporting freight and passengers		46,848 40
Salaries and insurance		7,904 65
Total		$147,915 02
Paid interest on funded debt		$22,749 30
Two semi-annual dividends—one of 3 per cent., and one of 3½		75,267 15
Total		$98,066 45

Marietta and Cincinnati Railroad.

The earnings of this road during the month of May were about $32,000 against $27,300 during the same month last year, an increase of $4,700. The passenger traffic of the two months amounted to about $12,000 each, the increase this year over last being principally in freight. The trustees having paid into the Ross County Court the $200,000 under the terms of the sale, and taken possession of the road, will probably call a meeting of the stockholders about the last of July or the 1st of August, for the purpose of electing a Board of Directors, and entering more fully into a thorough organization. In the meantime the road will be operated by the trustees for the benefit of the purchasers whom they represent. It is rumored that the new company, now in rapid progress of organ-

ization, will drop the old name, and assume that of the Southern Ohio Railroad.—*Marietta News.*

Assay of Japanese and American Gold Coins.

The following is the official certificate of the results of the analysis taken at the Mint, in the presence of the Chief of the Japanese Ambassadors:

MINT OF THE UNITED STATES,
PHILADELPHIA, June 14, 1860.

For the satisfaction of their Excellencies of the Japanese Embassy, the undersigned, Director of the Mint of the United States, certifies to the results obtained by assay of gold coins of Japan and of the United States, made in their presence, by the proper officers of the Mint.

One cobang, weighed 138 21-32 grains, and the gold extracted from it weighed 79 10 32 grains.

One other cobang weighed 138 10 32 grains, and the gold extracted from it weighed 79 5 32 grains.

One other cobang weighed 139 9-32, and the gold extracted from it weighed 79 22-35 grains.

So, on the average of these three, the cobang contains 79⅜ grains of gold which makes the proportion of fineness 572 thousandths. This result agrees so well with our report of assays made in our usual way, (by taking only a half grammo, or about 7¾ grains,) that we trust it will give additional confidence to the Embassy, in our regular method of assay.

A gold dollar of the United States, weighed 25 26-32 grains, and the gold extracted from it weighed 23 7 32 grains, which agrees as nearly as may be to 900 thousandths, our legal standard.

Therefore, for comparison, the cobang contains 79⅜ grains of gold and the dollar contains 23 7-32 grains of gold. But it will be more strictly accurate to say that the proportion of gold in a cobang is 572 thousandths, and in the dollar 900 thousandths. It is necessary to add that the average weight of the gold dollar is 25 8-10 grains by law, which is a more exact basis of calculation than the single piece, which weighed 25 8125-10,000, and was therefore a little too heavy.

The silver being extracted, with the necessary allowance for absorption, showed almost 59 grains of silver in each cobang, and the copper was only 12-32 of one grain in each cobang.

To recapitulate: the average composition of the cobang is as follows, in grains:

Gold	79 12-32 grs.
Silver	59 "
Copper	0 12-32 "
Total	138 24-32 grs.

JAMES ROSS SNOWDEN, *Director of Mint.*

Funded Debt of North Carolina.

Bonds to pay debt of the State, under act of January 28, 1851	$ 170,000
Bonds to Fayetteville and Western Plank Road	152,000
B'ds to Tar River and Gaston and Weldon Railroad	120,000
Bonds to North Carolina Railroad	3,000,000
Bonds to Fayetteville and Central R. R.	50,000
Bonds to Fayetteville and Warsaw Plank Road	10,000
Bonds for account Tar River, under act 14th February, 1858	15,000
Bonds issued on account Insane Asylum.	125,000
B'ds to Atlantic and North Carolina R. R.	1,466,500
Bonds to Western North Carolina R. R.	180,000
Bonds to Cape Fear and Deep River	800,000
B'ds to Albermarle and Chesapeak Canal.	850,000
B'ds to Fayetteville and Coal Field R. R.	800,000
Bonds to Wilmington, Char. and Rutherford Railroad	400,000
Bonds issued under act for certain purposes, session 1858-9	1,213,800
Due Literary Fund on Note	31,905
Total	$8,833,305

The interest on the above debt is payable on the first days of January and July, on this amount, $5,721,705; and the first days of April and October on this amount $3,111,600.

The interest on the above debt is $529,998 80.

The State has indorsed bonds of Wilmington and Weldon Railroad Company for $200,000.

The prospective debt of the State on account of Wilmington, Charlotte and Rutherford Railroad and Western Extension of North Carolina Railroad, may be stated at $500,000, making the actual and prospective debt about $13,833,305.

Of course, as this prospective increase of indebtedness depends upon contingencies which may arise, it cannot be accurately told. Should the floating debt of the State, at this time of small amount, be funded, and the State be called upon to pay the principal of her indorsements for the Cape Fear and Deep River Navigation Company, as it is feared she will, the foregoing amount of the funded debt will be slightly increased.

Delaware and Raritan Bay Railroad.

This road was formally opened on the 18th inst. The company was incorporated in the year 1854 by an act of the New Jersey Legislature. Its cash capital is one million and a half of dollars, with a floating capital of as much more. The road inaugurated is but a portion of the road terminating in New Jersey at Cape May, passing through the most important villages on the sea coast of Jersey. It will intersect on the southern border of Atlantic county the air line railroad to Philadelphia, and trains from New York to the latter place, will, before the lapse of another year, be established. The distance between these cities, by the new route, will be a trifle further than by the Camden and Amboy route, but with these advantages quicker speed can be made, and ten miles less of water travel. At Cape May the Delaware river will be crossed for a distance of 12 miles to Lewes, Delaware, where it will intersect another portion of this road extending further on south for 125 miles to the Capes of the Chesapeake, another ferrying for twelve miles to Norfolk, thus making a new continuous line of steamboat and railroad from New York and Norfolk, a distance of 300 miles, 250 of which will be by the railroad and 50 by steamboat. At Norfolk the road will be intersected by railroads already in operation, to the Gulf of Mexico. It is confidently expected that by the new route Norfolk can be reached from New York in twelve hours. The work on the Delaware and New Jersey sections of the route will be prosecuted with vigor during the summer, and it is expected the road to Cape May will be finished in one year.—*Philadelphia Inquirer.*

Burlington and Missouri Railroad.

At the annual meeting of this company held on the 20th inst., the following gentlemen were elected Directors for the ensuing year: Jno. M. Forbes, R. B. Forbes, John W. Brooks, L. Kidder, Boston; James F. Joy, Detroit; E. Corning, Albany; Edward L. Baker, New Bedford; John G. Read, W. F. Coolbaugh, Burlington.

Manufacture of Iron.

An invention, which consists in the peculiar application in the manufacture of iron of the gases generated by passing steam over carbonaceous matter sufficiently heated to effect the decomposition of the said steam, has been patented by Mr. Frederick Levick, of Blaina and Cwn Celyn. The gases are used either separately or in conjunction with the gases evolved from the blast furnace, or with the combustible gases produced by the action of atmospheric air on incandescent carbonaceous fuel. He applies the said gases or mixture of gases in the processes of refining pig iron, the puddling of either pig or refined iron, and in the balling or reheating of iron. Or he applies the said gases or mixture of gases to iron remelted in a cupola, or at any stage of the manufacture of iron, between the smelting and the conversion of the cast iron into wrought iron. When carbonaceous fuel containing sulphur is employed to decompose the steam, the gases resulting therefrom may, when necessary, be purified by passing them through water containing lime, either dissolved in water or in suspension, or through slaked lime or hydrated oxide of iron. He prefers to superheat the steam before passing it through or over the heated carbonaceous matter.

Railroad Earnings.

The following is a comparative statement of earnings and expenses of the Buffalo and State Line Railroad Company for the month of May, 1859 and 1860:

	1859.	1860.
EARNINGS.		
Passengers	$33,419 18	$37,980 60
Freight	21,500 17	30,198 99
Other sources	1,894 00	1,632 00
Total	$56,713 30	$69,811 59
Increase		$13,098 29
EXPENSES.		
Maintaining road	$17,414 20	$16,620 99
Repairs of machinery	4,092 97	5,830 42
Operating	14,429 56	12,762 22
Total	$35,936 73	$35,214 23
Decrease		$722 50

The traffic of the Great Western Railway of Canada for the week ending June 15, 1860, was as follows:

Passengers	$17,616 19
Freight and live stock	10,904 03
Mails and sundries	1,305 14
Total	$29,825 37
Corresponding week last year	33,180 23
Decrease	$3,354 86

The receipts of the Grand Trunk Railway of Canada, for the week ending June 9th, 1860, were | $53,301 50
Corresponding week, 1859 | 38,917 27
Increase | $14,384 23
Total traffic from July 1, 1859 | $2,753,180 20
Do. for same period last y.. | 2,151,118 06
Increase | $602,062 14

The following is a comparative statement of the earnings of the Marietta and Cincinnati Railroad for May, 1859 and 1860:

May, 1860	$33,667 31
May, 1859	27,331 06
Increase	$6,336 25

The freight earnings for the two months compare as follows:

May, 1860	$20,831 44
May, 1859	15,167 99
Increase	$5,663 45

The following are the earnings of the Great Western Railway for the week ending June 22d, 1860:

Passengers	$17,621 75
Freight and live stock	10,388 88
Mails and sundries	1,299 36
Total	$29,310 00
Corresponding week of last year	33,425 88
Decrease	$4,115 88

Lexington and St. Louis Railroad.

The arrangement by which the Pacific Railroad Company agree to surrender to the Lexington and St. Louis road twenty per cent. on all travel and freight received over this line, has been perfected by Mr. Akers, the fiscal agent, who recently visited St. Louis for that purpose. We learn that parties proposing to contract for building the Lexington and St. Louis road are willing to take this bonus for $100,000. It is said to be worth even more than that. On the north side of the river a strong feeling prevails in favor of connecting with St. Louis and the East by means of a road to Lexington.—*Lexington Expositor.*

Note.—This year is notable for the consolidation of the line of railroads between Albany and Troy and Buffalo into the New York Central Railroad. This event occurred two months previous to the termination of the fiscal year, and hence in the above table the earnings of the separate roads are given for ten months, and of the consolidated road for two months. The capital account, however, is only given under the roads separately.

The New York Central Railroad as constituted in 1853, consisted of the original roads as herewith detailed—the Albany and Schenectady Railroad, 16.97 miles; the Utica and Schenectady Railroad, 78 miles; the Syracuse and Utica Railroad, 53 miles; the Rochester and Syracuse Railroad, 80 miles; and the Buffalo and Rochester Railroad, 80 miles—which make up the present main line; and the following lateral and branch lines—the Schenectady and Troy Railroad, 21 miles; the Syracuse and Rochester Railroad (old line), 104 miles; the Batavia and Attica Branch Railroad, 11 miles; the Rochester, Lockport and Niagara Falls Railroad, 74.75 miles; the Lockport and Tonawanda Railroad, 12.25 miles; the Rochester and Lake Ontario Branch Railroad, 6.88 miles; the Buffalo and Niagara Falls Railroad, 22 miles, and the Niagara Falls and Lewiston Railroad, 6.25 miles. Some slight alterations in the termini and connecting points and also on the line of the road have since been made which have somewhat reduced the mileage which is now represented as follows—main line 297.75 miles, and branch and lateral lines 258.13 miles—total 555.88 miles.

The total cost of the road and equipment on the 30th September, 1858, was $25,907,374. The cost on the 30th September, 1859, was $30,840,713.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

American Railroad Journal.

Saturday, June 30, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

OUR NEW RAILROAD MAP for 1860.

Applications for copies of this Map having become so numerous of late, we have decided to republish it. We expect to have copies on hand for sale and for distribution among our subscribers in the course of the coming week. The price for them will be: mounted $3.00; do., colored in counties, $4.00; in pocket form with cover $1.00. The latter sent by mail, prepaid, upon receipt of the price. We propose to give a copy of the pocket edition of this Map to each of our subscribers upon the receipt of remittances from them in payment of their subscription to the JOURNAL to the close of the current year.

Farm Mortgage Bonds in Wisconsin,

The Supreme Court in this State has affirmed the validity of what are termed "Farm Mortgages," by which payment of subscriptions to stock in most of the Railroads of the State were secured. These farm mortgage bonds were, for a time, a favorite investment, from the excellent security they were supposed to offer; but the roads proving unproductive, the payment of the interest on them was refused, and the legality of their issue contested, this has now been *affirmed* by the highest judicial tribunal of the State. In our next number, we hope to be able to give the decision in full.

Brunswick and Florida Railroad.

The Waresboro', Ga., *Forester* says that this road will be put under contract at an early day to Albany; that northern capital has been secured for its construction; and that Mr. Wheeler, the President, has already left for Europe for the purpose of procuring the iron.

Long Dock Tunnel, N. J.

As the "great tunnel" approaches completion, information in relation to it is naturally sought after. Its length is 4,300 ft., through solid rock, and of a width and height sufficient to pass two trains of cars. The entire length of the railroad from the end of the pier to the junction west of Bergen Hill is 15,200 feet or 2.88 miles. This road is being constructed for the use of the New York and Erie Company, and the Long Dock will henceforth be the New York terminus of the Great Western Avenue. The cost of the work to the 1st March, 1860, has been $1,488,121, which sum is accounted for as follows:

Tunnel and approaches	$749,611
Road from pier to tunnel	210,159
Docks and piers	143,659
Engineering, etc	64,374
Lands, after deducting mortgages	320,318

Which amounts have been secured from the following names:

Share capital	$458,500
Mortgage bonds	126,000
Advances by the N. Y. and Erie Co., and the Hoboken Land and Improvement Co.	803,631

The total capital authorized is $800,000 in 8,000 shares, and the full amount provided under the mortgage is $500,000. Besides the above works, the Long Dock Company owns 1,580 lots of ground not required for its purposes, and one quarter interest in 1,024 lots in addition thereto, with a river front of 1,800 feet. The Erie Company will require only about 450 lots for passenger, car, wood, freight and engine-houses, machine shops, etc. The limited space for such a purpose in Jersey City has been long felt by the Company for whose use this work is intended.

Illinois Central Railroad Company.

This company has made an assessment of $5 per share, payable July 20th. This call will give them about $600,000 which, with the payments on full stock and the proceeds of eight per cent. bonds sold, will put the company in funds to pay off the Freeland Bonds maturing in September, now reduced to about $1,500,000. The payment of these bonds will release a large body of the most valuable lands held by the Company. The interest of the full paid stock and eight per cent. bonds can be easily paid from the sales of lands, while the managers are confident that the net traffic earnings of the road will be ample to meet the interest on the $15,000,000 construction bonds outstanding. Letters from the Land Commissioners of this company at Chicago, indicate the commencement of emigration to Illinois. It is said that more agricultural lands have changed hands this Spring than for two years previous. The movement is toward Southern Illinois, where Winter Wheat is more certain, and the mild Winters are favorable to stock farming.

Atlanta and Jacksonville Railroad.

At a meeting of the Georgia Railroad Company, held in the city of Augusta on the 19th, $250,000 was unanimously subscribed to the Georgia and Western Railroad.

The city and citizens of Atlanta have already subscribed to this enterprise, to the amount of $450,000, which with the $250,000 above, warrants 40 miles of the road being put under contract as soon as the engineers can prepare the work for letting.

Stony Brook Railroad.

The annual meeting of this company was held at Lowell, Mass., on the 25th inst. By the report of the directors it appears that the capital stock issued is $267,300, and the cost of the road $267,383 57. The earnings of the road for the six months ending Sept. 30th, 1859, were $27,977 57, and the expenses for the same period $19,645 27, leaving as net receipts $8,332 30, three-sixteenths of which ($1,562 30) goes to the Nashua and Lowell Railroad Company, leaving as the earnings $6,770. The account of the Treasurer shows a balance in the treasury, after paying all claims of dividends, of $1,278 68. The amount of the earnings and expenditures of the road for the six months ending April 1, 1860, did not appear on the books of the Nashua and Lowell Railroad Company furnished to the directors. A new contract made by the directors with the Nashua and Lowell Railroad Company was adopted. By the new arrangement it is provided that the Nashua and Lowell Company shall pay, in equal semi annual payments, $17,700, which secures to the stockholders six and one-half per cent. for the use of the Stony Brook Railroad. The following gentlemen were elected directors for the ensuing year:

President—TAPPAN WENTWORTH.

Directors—Tappan Wentworth, John Wright, of Lowell; Ziba Gay, of Nashua; Sewall G. Mack, of Lowell; John W. P. Abbott, of Westford; Wm. A. Burk, of Lowell; B. F. Clark, of Chelmsford.

Treasurer—S. W. STICKNEY.

Speaking Tubes--Patent Alarm Whistle.

Speaking Tubes have become one of the necessities of the day in consequence of the immense increase of large buildings throughout the world. The time was when their usefulness was supposed to be limited, from the mistaken idea that sound could not be conveyed at a distance of more than about two hundred feet effectually, and especially when the tube must have any number of bends or turns in it. We are satisfied that a greater distance can be accomplished when the tubes are properly and scientifically adjusted.

Mr. Wm. Ostrander of No. 158 William street, New York City, assures us that he has fitted up tubes four hundred feet in length and that they proved a complete success, and that from his experience and actual experiments, he is willing to assert that distinct articulation may be heard through a tube at the distance of *one mile*, if the laws of accoustics be properly adhered to in the construction and adjustment of the tube.

If these assertions be true, then the Speaking Tube stands next in importance to the Electric Telegraph, from the fact that any large establishment can concentrate all its business at one point from which orders and communications may be given and received, and thereby save an immense amount of labor and time.

The Patent Alarm Whistle, which is becoming so much used, not only in large store houses, printing establishments, factories, steamships and churches, but also in dwellings, adds such a great advantage to the use of speaking tubes, has, as the manufacturer informs us, increased the demand over five hundred per cent. in the last ten years.

Mr. O. has given a large amount of his time and attention to the manufacturing and fitting up of these tubes for the last ten years, and we do not hesitate to refer our readers to his advertisement.

Bonds of the Columbus, Piqua and Indiana Railroad.

Holders of the bonds of the Columbus, Piqua and Indiana Railroad Company, indorsed by the Cleveland, Columbus and Cincinnati Railroad Company, in view of the decision of the Supreme Court of the United States against the indorsers, had expected that the interest due them would at once be paid. We learn, however, that no provision has been made for the payment of this interest, and the inference is, that they have determined upon allowing the question to go before the courts on the main issue, they regarding the removal by the United States Supreme Court of the injunction of one of their own stockholders, which restrained them from paying the interest on the bonds, as nothing more than a collateral proceeding. The amount involved, it will be remembered, was about a half million of dollars.

Insurance Dividends.

The Washington Marine Insurance Co. have declared a dividend of 3½ per cent., payable July 2. The Neptune Insurance Co. an interest dividend of 3½ per cent., payable July 2. The Brooklyn Fire Insurance Co. a semi-annual dividend of 10 per cent., payable July 2. The Anchor Insurance Co. an interest dividend of 7 per cent., payable July 10 on the preferred stock, and on the redeemable stock on the 16th. The Mercantile Mutual Insurance Co. a semi-annual dividend of 3½ per cent., payable July 2. The Harmony Fire and Marine Insurance Co. a semi-annual dividend of 5 per cent., payable July 2. The Long Island Insurance Co. a semi annual dividend of 10 per cent., payable July 2. The Great Western Marine Insurance Co. a semi-annual interest dividend of 3½ per cent., payable July 2. The Howard Insurance Co. a semi annual dividend of 10 per cent. payable July 4. The Goodhue Fire Insurance Co. a dividend of 6 per cent., payable on demand. The Mercantile Fire Insurance Co. a semi-annual dividend of 6 per cent., payable July 2. The Park Fire Insurance Co. a dividend of 10 per cent., payable July 2. The Commonwealth Fire Insurance Co. one of 6 per cent., payable July 2.

Bank Dividends.

The Bank of New York has declared a semi-annual dividend of 3 per cent., payable July 2. The Irving Bank a dividend of 3½ per cent., payable July 2. The Metropolitan Bank a dividend of 4 per cent., payable July 2. The Bank of the Commonwealth 3½ per cent., payable July 2. The Seventh Ward Bank 5 per cent., payable July 2. The Broadway Bank 5 per cent. The Chemical Bank a quarterly dividend of 6 per cent., payable July 2. The Merchants Exchange Bank 3½ per cent., July 2. The Tradesmen's Bank 4 per cent., payable July 2. The Mechanics' Bank 4 per cent., July 2. The Bank of America 3½ per cent., payable July 2. The Bank of North America 3½ per cent., payable on the 9th of July. The Atlantic Bank, Brooklyn, a dividend of 5 per cent., payable July 2. The Bank of Commerce has declared a dividend of 3½ per cent., payable July 2. The Continental Bank 3½ per cent., payable July 2. The Grocers' Bank a semi-annual dividend of 3½ per cent., payable July 22. The People's Bank a semi-annual dividend of 3½ per cent., payable July 6. The Mechanics and Traders Bank 4 per cent., payable July 5.

Interest on Stocks, Bonds, etc.

The Little Miami Road has declared a semi-annual dividend of 4 per cent.

The Cleveland, Painesville, and Ashtabula Railroad Company (Cleveland and Erie), have declared a semi-annual dividend of 5 per cent.

The Boston and Providence Railroad has declared a semi-annual dividend of 4 per cent., payable 2d July.

The Old Colony and Fall River Company a dividend of $3 per share payable July 2d.

The Boston and Maine Railroad pays 4 per cent. July 2d.

The Boston and Worcester Railroad Company, a semi-annual dividend of 4 per cent. payable July 2d.

The Cleveland, Columbus and Cincinnati Railroad Company has declared a dividend of 4½ per cent. on the earnings of the six month ending June 30, payable August 1. This is a reduction of ½ per cent. on the usual semi-annual dividend, which is accounted for by the failure of the crop last year along the line of the road.

The Delaware and Hudson Canal Company have declared a semi-annual dividend of 3½ per cent., payable on the 20th inst.

The Fitchburg Railroad a semi-annual dividend of 3 per cent., payable July 2d.

The semi-annual interest, due 1st June, on the First Mortgage bonds of the Buffalo, New York and Erie Railroad Company, will be paid at the Bank of Commerce in this city.

The interest coupons falling due July 1st, 1860, upon bonds of the Chicago, Burlington and Quincy Railroad Company, the Chicago and Aurora Railroad Company, and the Central Military Tract Railroad Company, will be paid at maturity by the Bank of Commerce.

The interest on the public debt of the State of Illinois will be paid at the American Exchange Bank, July 2d, and for 30 days thereafter. Holders of Illinois and Michigan Canal Bonds, where coupons are exhausted, will present their Bonds.

Messrs. Cammann & Co. will pay the coupons due last August on the First Mortgage bonds of the Toledo and Wabash Railroad.

The November (1859) coupons of the first mortgage bonds of the Lacrosse and Milwaukee Railroad will be paid on presentation at the Broadway Bank.

The holders of the bonds of the City of Covington, given to the Covington and Cincinnati Bridge Company, should present their coupons (due and over-due) for payment at the Bank of America.

The July Coupons of Staten Island Railroad first mortgage bonds will be paid at No. 2 Bowling Green, on and after July 18th.

The Trustees of the Illinois and Michigan Canal have ordered a dividend of 5 per cent. on their bonds and canal indebtedness, payable by the Treasurer, No. 160 Front st., New York, 2d July.

The New York Central Company advertise to pay off $100,000 New York State 5½ per cents, originally issued in aid of the Auburn and Rochester link of the now consolidated line. The interest is made to cease on 1st August, when the certificates will be redeemed at the bank of Duncan, Sherman & Co.

Holders of Missouri State Bonds are hereby notified that the semi-annual interest falling due thereon, on the 1st of July, will be promptly paid at the Bank of Commerce, in the city of New York.

The Treasurer of the Boston and Worcester Railroad announces that all outstanding bonds of the road will be paid on presentation, with interest. These bonds which amount to between five and six hundred thousand dollars, were issued a number of years since to meet the expense of an additional freight depot in Boston and authority was afterward granted to turn those bonds into stock; but with good management they have been paid out of the current earnings, while the stockholders have received good dividends upon their money.

The Michigan Southern and Northern Indiana Railroad Company, will commence to pay the overdue coupons on the first mortgages upon their road and its branches, on the 16th July, and hope to be able, through a short period thereafter to satisfy, in cash, all these coupons. The following is the first mortgage interest now in default:

Issue.	*Principal.*	*Int. Overdue.*
Mich. Southern	$993,000—May, '60.	$34,755
North. Indiana, ...	985,000—Feb., '60.	34,475
Erie & Kalamazoo.	300,000—M'ch, '60.	10,500
Jackson Branch ...	195,000—Feb., '60.	6,825
Goshen Branch	1,287,000—Feb., '60.	45,045
Total	$3,760,000	$131,600

The Company, upon its present scale of earnings, expects hereafter to pay promptly upon the above, as well as upon the Sinking Fund Bonds.

The coupons of the Evansville and Illinois Railroad, due July 1, will be paid by the Farmers' Loan and Trust Company.

The Panama Railroad Company have declared a semi-annual dividend of 6 per cent., payable July 2d.

The interest coupons of the Alabama and Florida Railroad will be paid July 1, at the office of A. G. Jaudon, No. 54 Wall st.

Messrs. Atwood & Co., No. 104 Broadway, will pay the interest due July 1st, on the bonds of the State of Iowa. Also, the interest due 1st on the bonds of the City of Quincy, Ill.

The coupons of the Sacramento Valley Railroad Company, due 1st of July, 1860, on $100,000 First Mortgage Bonds, will be paid after that day at the office of Schuchardt & Gebhard.

The Terre Haute and Richmond Railroad a semi-annual dividend of 5 per cent., payable at the Farmers' Loan and Trust Company, in this city, on the 2d of July.

The Worcester and Nashua Railroad have declared a dividend of $2 per share payable 5th July.

The semi-annual interest of the Joliet and Chicago Railroad Company, due July 1, 1860, will be paid on presentation of the bond, at the office of M. K. Jesup & Co., No. 44 Exchange Place.

The July interest on the regular 8 per cent. bonds of the State of Minnesota will be paid by Clark, Dodge & Co.

The Western Railroad of Massachusetts a semi-annual dividend of 4 per cent. payable July 2d.

The Bank of the State of New York has received the funds to pay the coupons due in July on bonds of the State of Virginia.

The Bank of the Republic has received the funds for the payment of the interest on the State debt of North Carolina.

The Petersburg and Roanoke Railroad Company have declared a dividend of 5 per cent.

Pennsylvania Coal Company.

At an election for Directors of this company, held at Hawley, Pa., on the 5th inst., the following gentlemen were elected for the ensuing year: Isaac L. Platt, William R. Griffith, Jonathan Thorne, Wm. F. Havemeyer, Thos. W. Pearsall, William H. Falls, Charles Morgan, John Ewen, Geo. A. Hoyt.

At a subsequent meeting of the Directors, JOHN EWEN was unanimously re-elected President of the company for the ensuing year.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO., New York, June 22, 1860.

AT A MEETING OF THE BOARD OF DIRECTORS of the ILLINOIS CENTRAL RAILROAD COMPANY, held THIS DAY, it was

Resolved, That an assessment of Five Dollars per share upon the Capital Stock of the Company, for the purpose of discharging the outstanding Free Land Bonds be, and the same is hereby called, payable on the 20th day of July, 1860; and that the same be payable on the stock registered in the City of New York, at the office of the Company in that city, and on the stock registered in London, at the office of Messrs. Robert Benson & Co.; and that parties desiring to pay their instalments in London, may pay the same at the rate of four shillings two pence to the dollar; and that the Free Land Bonds, with accrued interest, shall be received at par in settlement of the call.

Resolved, That the transfer books be closed on the 14th day of July, and re-opened on the 20th; and that no transfers be permitted on, or after that date, of shares upon which such assessments shall not have been paid. By order of the Board.

3t26 A. E. BURNSIDE, Treasurer.

$500,000 EIGHT PER CENT. LAND GRANT MORTGAGE BONDS OF THE TEXAS AND NEW ORLEANS RAILROAD COMPANY (Texas Division), secured by a mortgage upon one hundred and six (106) miles of railroad and its appurtenances, of the estimated cost of $2,920,000, and upon seven hundred and sixty-eight thousand (768,000) acres of valuable land, are now offered to the public as one of the most desirable and reliable securities at present upon the market.

THIS ROAD

is the Texas Division of the great trunk line which, within twelve to eighteen months, will connect Houston, Galveston and every important point in Texas, with New Orleans, and, in communication with the lines running North and already completed, place New York within 90 hours of Houston.

THE BONDS

will be redeemable on 1st November, 1878, bear 8 per cent. interest; coupons payable semi-annually, on 1st May and 1st November, in the City of New York.

As additional security for prompt payment of the coupons, pending the completion of the entire road, are mortgaged by special trust-deed, 76,800 acres of land, together with town lots and individually donated lands, at present valued at $600,000.

Maps, prospectuses, copies of charter, trust deeds, land grants, and every information, may be had upon application to C. CONGREVE & SON, No. 6 Pine st.; or E. WHITEHOUSE, SON, & MORRISON, No. 38 William st., Merchants' Exchange.

LYONS' TABLES.

To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

Sheet No.				Sheet No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft.	Slop.	1¼ to 1
				14.	" 20	"	1½ to 1
2.	For Side Hill Cuts and Fills.			15.	" 24	"	¼ to 1
3.	Base 12 ft.	Slopes	1¼ to 1	16.	" 24	"	1½ to 1
4.	" 14	"	1½ to 1	17.	" 25	"	1½ to 1
5.	" 15	"	¼ to 1	18.	" 26	"	1½ to 1
6.	" 15	"	1 to 1	19.	" 28	"	¼ to 1
7.	" 15	"	1¼ to 1	20.	" 30	"	1 to 1
8.	" 16	"	¼ to 1	21.	" 30	"	1¼ to 1
9.	" 16	"	1 to 1	22.	" 30	"	1½ to 1
10.	" 18	"	¼ to 1	23.	" 32	"	1 to 1
11.	" 18	"	¾ to 1	24.	" 32	"	1¼ to 1
12.	" 18	"	1 to 1				

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,

By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor
F. S. PEASE, 61 Main st., BUFFALO.
Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.

TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture ROSENDALE HYDRAULIC CEMENT of a superior and uniform quality, and are constantly receiving it fresh from their Works at Rosendale. Particular attention paid to grinding fine, and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

HUDSON RIVER
CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER, and MARBLE DUST, all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of dry concrete and Underwater Works. Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every departme t of the Works under Government.

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing 300 lbs. of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), at all seasons of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, Hudson River Cement Company, Jersey City, N. J., or J. H. BUTTS, Secretary.

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We warrant it equal in every respect to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a superior article for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well paperred, on application at their office, by DELAFIELD & BAXTER, 104 Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: HOFFMAN'S ROSENDALE CEMENT. This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving fresh from the Mills their approved ROSENDALE CEMENT, warranted pure and free from quick lime, and which has given such general satisfaction in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the genuine ROSENDALE CEMENT, branded "NEWARK AND ROSENDALE." "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight kiln dried barrels, and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

Farm Mortgage Bonds in Wisconsin.

The following in the decision of the Supreme Court of Wisconsin in an action to foreclose a Farm Mortgage given to the LaCrosse and Milwaukee Railroad Company. The case was brought up on appeal from Dodge County Circuit.

William D. Clark vs. W. Farrington and Wife.

PAINE, J.—The cash capital in this State was inadequate to the building of its railroads, or even to the payment of such proportion as is usually paid in cash for stock in the older and more wealthy communities. But the farmers along the routes, having confidence in the success of the enterprise, and the ultimate benefit to themselves, were willing to mortgage their farms for stock, placing the securities in the hands of the companies, to negotiate and raise the funds necessary for building the roads. This practice was extensively adopted along most of the roads in the State. The securities were taken and negotiated by the companies, and default having been made in payment, a number of actions have been brought to collect the notes, or foreclose the mortgages. The defence is now set up, that the companies had no power under their charters to take these securities for stock, and that they were therefore void.

As is usual in such cases, many considerations were alluded to in the arguments of Counsel, which have no bearing upon the legal question presented. If the farm mortgagors influenced, perhaps, by public spirit, combined with the hopes of private gain, have mortgaged their farms for stock, the facts that those hopes have failed and that financial ruin has fallen upon the enterprises, and that the execution of their contracts may prove hard and calamitous to many of them, furnish no reason in law why they should not be executed, provided they were such contracts as might in the law be made. On the other hand, if the companies had no power to take these notes and mortgages for any purpose, so that they were utterly void in their hands, the fact that large amounts have been invested in them, which will be lost to the purchasers, is no reason why the courts should hesitate to declare them void.

It has been contended on the part of the plaintiffs that even if the companies had not the power to take these notes and mortgages, for the particular purpose for which they were in fact taken, yet that they had power to take notes and mortgages for some purposes, and that being so, that these could be enforced in the hands of *bona fide* purchasers for value, which they claim to be. Perhaps some of the cases might be decided upon that ground. But as several have been argued, in some of which it will be necessary to decide upon the question of power, and as the conclusion to which we have arrived upon that, will render a decision of the others unnecessary, we will proceed to address ourselves to that, without further notice of other considerations.

The question is, had the companies power to take these notes and mortgages for stocks? In this case it arises under the charter authorizing the construction of a railroad from Milwaukee to La Crosse. The counsel for the defendants contend that the company had not the power, and that the transaction was a violation of its charter. To lay the foundation on which to sustain this position, they cited a large number of authorities establishing the proposition that a corporation has no powers except such as are conferred by its charter; and that its acts outside of those are void. This is too well settled to admit of dispute, and a moments' consideration of the great increase of corporations in modern times, and of the vast powers entrusted to them, as well as of the natural tendency of their accumulated capital to accumulate also influence and power, is sufficient to satisfy every intelligent mind of the absolute necessity of adhering to the rule of confining these bodies strictly to the accomplishment of those ends and objects which their charters authorize, and prohibiting them from all others. But while this is conceded, it is also true that to these organizations is entrusted the accomplishment of "enterprises of great pith and moment," which, when properly executed, contributes greatly to the convenience and prosperity of mankind, and even to the advancement of civilization—enterprises impossible to private unassociated capital, and which sometimes task even the enormous energies of corporations beyond their strength, so that after expending the best efforts of human ingenuity to accomplish the end, they either fail entirely, or succeed perhaps in completing an improvement, of which others may reap the benefit, only by the pecuniary ruin of its originators. These considerations are sufficient to show that the rule that corporations can exercise no powers not delegated, should not from an undiscriminating timidity or apprehension, be extended so as to unwisely and unnecessarily cripple and restrict them, as to the means of executing the powers that are delegated. Powerful as they are, it must be assumed that the law is powerful enough not only to control and confine them within their proper limits, but also within those limits, to allow them the exercise of a reasonable discretion in selecting among the various means that may be adapted to the execution of their powers. It is accordingly held in a large class of cases, many of which are cited by the counsel for the plaintiff, and which we do not deem it necessary to refer to in detail, that a corporation may adopt any of the usual means employed to accomplish the purposes authorized by its charter. It is true that this right of selecting among the means adapted to the end, is generally stated as limited to those usual and necessary. But precisely what limits those terms imply, does not seem to be well defined.

The Constitution of the United States gave Congress the power to pass all laws "necessary and proper" for carrying into execution the powers conferred upon the Federal Government. That Government chartered a bank, and its constitutionality being called in question, the Supreme Court of the United States, placed a construction upon these words. They held that the word "necessary" did not imply that the means used must be absolutely indispensible, but that the government might select any which were "needful," "requisite," "essential," or "conducive to," the end, and tended directly to its accomplishment, and therefore might charter a Bank. Whether or not it justifies that conclusion, there is undoubtedly great force in the reasoning of Chief Justice Marshal, as to the necessity of the power on the part of the Government to select means for the execution of its powers. And bearing in mind the disproportion between the powers of a government, and those of an ordinary corporation; we think that reasoning goes to sustain the right of the latter to an equal freedom in selecting among various means proper for the execution of its powers. There is a close relation between the principles applicable to the government of the U. S. and those applicable to a corporation. The former like the latter, can exercise no powers except such as

are delegated to it either expressly or implied as necessarily incident to those delegated. The reasons for confining both within the limits of the delegated powers, are equally obvious and familiar, yet this being constantly conceded, it by no means follows, that either, within those limits should be restricted with narrow and illiberal rigor, in the choice of means, adapted to the execution of their respective powers. And the same reasoning which excludes such rigor in the case of the government, in our opinion justifies its exclusion in the case of a corporation. But in applying it to the latter, due allowance should be made for the difference in the magnitude of their powers, for it would not at all follow that a corporation might adopt any means which the government might.

But it is unnecessary to pursue this point further, as it has been expressly passed upon by this court. In the case of *Madison, &c., Plank Road Co. vs. Watertown, &c., Plank Road Co.*, 5 Wis. 178, it was held that a corporation is not restricted to the means either "usual" or "necessary," but might select those "convenient and adapted to the end," though "unusual" and not absolutely "necessary." It was a Plank Road Company, and its charter gave it no power to loan money; but the court say that if it had seen fit to make a loan to one of its contractors to enable him to complete his contract, though unusual, it would have been a legitimate means of executing their power to build the road. When the case was here subsequently, and it appeared that the company had undertaken to assist in the building of another road, then its acts were held void, but this detracts nothing from the first decision.

This doctrine must of course be properly understood. It does not mean that a corporation may engage in a separate distinct business, not authorized by its charter, as a means of raising funds to accomplish the things authorized. This it could not do. A railroad company could not engage in banking, nor in manufacturing, nor speculating in real estate, as a means of raising money to build a railroad. It is only that it may adopt any convenient means, proper in themselves, tending directly to the execution of the powers conferred, and not amounting to the transaction of any distinct unauthorized business; though such means may not have been usually adopted in the execution of like powers.

We have then two established propositions of law: *first*, a corporation can exercise no powers except those conferred by its charter; *second*, in executing those powers it may adopt any proper and convenient means tending directly to their accomplishment, and not amounting to the transaction of a separate unauthorized business.

In order to decide this case, two questions remain to be determined: Was the taking of the note and mortgage for stock, an attempt by the company to execute powers not delegated? or was it a mere means of executing those that were conferred? If it was the latter, then was it a means which the company was prohibited from using?

Upon the first question there seems to be no room for doubt. The company did not attempt to do anything except to execute its power of building a railroad. The defendant was willing to take stock, but had not the money to pay for it. He was willing to give his note for it, and secure it by a mortgage. The company took it in payment with the sole intention of transferring it to raise the money. The result is the same as it would have been if the defendant had mortgaged his farm to a third party and obtained the money himself and paid it for his stock. In the end, by either method, the company has the money; the defendant, the stock, and the third party the mortgage. The company has simply resorted to a double transaction to get the money for its stock, instead of a single one. But it was a means tending directly to the execution of its power of building a railroad, by disposing of its stock for the money necessary therefor.

The other question is, whether this means was prohibited to the company? And towards this point the strongest arguments for the mortgagor is directed. It is said that the charter provides a specific method of raising funds for building the road; that is, by opening books for subscription for stock, and then requiring payment from the subscribers; and that this method having been provided for, every other is necessarily excluded. As a part of the argument, it is assumed that the charter contemplates and requires a payment in cash, and therefore that the company is in effect forbidden to receive anything else as such. This assumption is of course necessary, for the validity of the whole argument depends upon it. Let us examine whether it is correct. There is no express provision in the charter that the stock must be paid for in cash. Is such a provision implied? It was suggested that the language fixing the amount of each share at one hundred dollars, necessarily implies that the payments must be in cash. It was said that "dollars" meant money, and was not descriptive of anything else. But this suggestion seems entitled to but little weight when it is remembered that money is the standard of value, and is used as the representative and measure of the value of all other articles. Thus a note to be paid in specific articles is drawn for the payment of so many dollars in the articles agreed on. The use of the denominations of money to fix the amount in value if necessary in all such instruments. And the mere circumstance that the Legislature used that language in fixing the amount of each share of the capital stock cannot be considered as indicating any intention that the shares must be necessarily be paid for in cash. Because such a literal construction would require the company to keep its capital stock consisting of money. For that capital stock is to continue after the road is built, and would still consist of shares of one hundred dollars each. And if the use of the word "dollars" necessarily requires each share to be paid for in cash in the first instance, it would equally require it to continue in money.

But the charter instead of attempting to prescribe the manner of payment, expressly leaves it under the control of the Directors. It provides that they may re-open the books for subscription or open new ones; may decide the amount to be paid on subscription, and the "time, *manner* and proportions" in which the subsequent instalments shall be paid. This power of the directors to prescribe the "manner" of payment is directly repugnant to the theory under consideration. For if the charter had positively provided that payment should be made in cash and not otherwise, then it was idle to say that the directors might prescribe the manner, for it was already fixed beyond their control, the power to prescribe the manner of payment includes that of directing in what it should consist, which would of course be limited by the general purposes of the charter.

It also gives them the power to make "such covenants, contracts and agreements with any persons or persons, co-partnership or corporation whatsoever as the execution and management of the works and the convenience and interests of the company may require." This is certainly comprehensive language, and includes the power to make the contract in question, unless it is limited by other specific provisions relating directly to that subject matter, and we find none having that effect.

But it is said that the charter provides for stock subscription books, and that the defendant never subscribed in a book, and therefore he is not a stockholder. But is that absolutely essential? True, the charter provides for opening books and for subscriptions therein, and the same clause implies that a part should be paid, at the time of subscribing, and the remainder in instalments as the Directors should require. But suppose a party should be ready to pay for his stock at once? If he pays the money, and the company issues to him the stock, is he not a stockholder? Is it not a valid transaction? Or must he necessarily enter into a contract to pay, although ready to pay at once? Would the company not be authorized to receive payment and deliver the stock, under its general power to make whatever contracts the convenience or interests of the company might require, even though the formality of a stock subscription was not complied with? We cannot doubt it, and if such a transaction would be valid with one paying cash, it would be equally valid with one paying by note or mortgage, provided the company had power to take them in payment. So that it is left as before, depending simply on the question of power.

It is not true, as seems to be assumed, that the great primary object of the charter is to raise an amount of money equal to the capital stock; the primary object is to build and equip a railroad. Money is necessary as a means, but it is not the end. And we can see no objection whatever to a railroad company issuing stock and taken in payment materials or labor, or land necessary for its road. So far as it can build and equip its road for stock, it is the most simple and direct method of accomplishing it. It gets at the object, then, by a single transaction, when it would require two, if the subscriber must first pay the money and then receive it back again for whatever he furnished. And we think it might be safely asserted that no railroad was ever built in the country without disposing of more or less stock in payment for labor, materials or land. And there are but very few cases, where the propriety of this course, or the power of the companies so to dispose of it was ever called in question, and in those the power was sustained; while there are many cases where such contracts have been enforced, without question, disputes having arisen upon other points. The following may be referred to as illustrations: *Vermont Central R. R. Co. vs. George Clayes*, 21 *Verm.* 30; *Boody vs. R. R. Co.*, 24 id. 660. These are cases where a large proportion of the payments to contractors were to be made in stock. *Moore vs. Hudson R. R. Co.*, 12 Barb. 156; *Porter vs. Buckfield Branch R. R.*, 32 Maine 539; *Barker et al vs. Fr. & Rut. R. R. Co.*, 27 *Verm.* 767, and many others that might be referred to are of the same character. The multitude of cases of this character, in which no question has been made as to the power of the corporation to make such disposition of their stock, considered in connection with the well known strictness of the law of corporations and the ability and acuteness of the profession, usually not unwilling to raise any question upon which there is any hope of success, is entitled to more weight, against the position here contended for, than a limited number of positive adjudications.

But reliance is placed upon several cases which have held that where by statute commissioners were appointed to take subscriptions preliminary to the organization of a corporation and were required to receive a specified sum at the time of subscriptions, that a subscription taken by them without a compliance with that condition, would be invalid. These cases are the following: *Hibernia Turnpike Co. vs. Henderson*, 8th Serg. and Rawle, 219, and several subsequent cases in Pennsylvania, following that. *Jenkins vs. Union Turnpike Co.*, 1st Cai. cases in error, 86; and *Crocker vs. Crane*, 21 Wend, 211. It would be a sufficient answer to the argument attempted to be derived from them to say that they are entirely inapplicable to a contract made by a corporation after it has once acquired a legal existence and capacity to act. And the very reasoning upon which they proceed clearly implies that those same courts would not have applied the same rule to such a case. For the basis upon which they rest, is, that at the time of these subscriptions, the corporation which they are to organize has no existence, and that the commissioners are simply ministerial agents, clothed with no discretion or power to contract, and can only pursue the strict letter of the statute. It may well be urged that where the law requires the payment of a specified sum as a condition precedent to the organization of the company, that its intention was that such payment should be in cash. Until that was paid there would be no corporation in existence, no authorized purpose for the accomplishment of which any other article could be received—nobody clothed with any discretion in the matter or capacity to

regulate it by contract. These cases may therefore be considered to be law, and they by no means establish the proposition, that after a corporation has acquired existence and power to contract, that it may not by contract receive in payment for stock anything necessary for the execution of its purposes, on the contrary the opposite inference is to be derived from them.

In *Crocker vs. Crane* it was intimated that the commissioners had no authority to receive worthless checks or uncurrent money in lieu of cash, and it was said they could not have received "stocks or mortgages." But this was evidently placed upon the considerations we have suggested. For the learned Judge who gave the opinion quoted, among other cases, that of *Goshen Turnpike Co. vs. Hurtin*, 9 John 217, which was an action on a promissory note, evidently given after the organization of the company, for five shares of stock. The action was sustained, and the court said "it was to be intended that the defendant had duly become a stockholder to that amount." It is not to be supposed that Judge Cowen, with his proneness to comment upon authorities, would have quoted this case approvingly upon another point, without noticing its conflict with the decision on the main point, if he had supposed the acts of a corporation in existence stood upon the same footing with the acts of the commissioners, in taking the steps preliminary to its creation.

But it is very doubtful whether even the doctrines of these cases is sustained by the weight of authority. In the case of *Jenkins vs. Union Turnpike Co.*, the decision of the Supreme Court of New York, was in favor of the validity of the subscription. This decision was reversed by the Court of Errors, but it is pretty evident from subsequent decisions in that State, some of which are quoted in *Crocker vs. Crane*, that the decision of the Court of Errors was not satisfactory. In the case in 8th Serg. and Raw., Justice Duncan dissented, and noticed the reluctance of the New York courts to follow the decision of the Court of Errors.

In *Central R. R. Co. vs. Clayes*, 21 Verm. 30, the commissioners took a note for the payment required by the statute on subscription. It was delivered by them to the corporation, on its organization, and the court held that it was valid, and its payment might be enforced. In *Greenville & C. R. R. Co. vs. Woodsides*, 5 Rich. 148, while deciding the case upon another ground, the court say expressly that they are not inclined to admit that a note taken by the commissioners was not such a payment as the statute required. The case of *McNeal vs. Russell*, 12 Ire. 224, is a very strong case against the doctrine contended for by the counsel for the moftgagor here. There the statute expressly provided that five dollars should be paid on subscription, and that if not paid the subscriptions should be void. The commissioners took a bond in payment. The court held that by reason of the express provision of the statute the subscription was void, but that the bond was valid. They say, "So in this case the defendant could not have been compelled to pay the $5 a share by force of the subscription, yet if he and the other subscribers chose to waive the provisions thus made for their benefit respectively, and agreed, that upon his giving bond for the same, it should be taken as cash and be admitted into the company, and he deliberately does so, it is not seen that any principle of law or justice is violated, or that there is any reason why he should not pay this as much as any voluntary bond."

It is very doubtful therefore, whether the weight of authority is not against the doctrine of these cases, but even if conceded correct they do not support the position contended for. See also Redfield on Railways, 87—8.

Cases already referred to, and a number of others cited on the plaintiff's brief, sustain fully the proposition, that a corporation may receive a note in payment for stock, and, that having done so, they cannot refuse the party giving it the privileges of a corporation. In *R. R. Co. vs. Hickman*, 28 Penn. St., 318, it is expressly decided that the provisions of the statute concerning the powers of the commissioners are not applicable to the acts of the company after its organized. And that under the general power to prescribe the manner of paying for stock, and to make contracts, &c., it may take payment in labor, materials, or anything necessary for the building of the road. In *Carr vs. Le Fevre*, 27 Penn. St., 413, it was held that a transfer of land to be used for the purposes of the corporation, was a good payment for stock. In *Brown and Brothers vs. Illius*, 27 Conn. 84, the entire stock of a corporation had been paid for in real and personal estate necessary for the use of the company. The court below charged that it was a valid payment, and though the Supreme Court did not find it necessary to decide the point, they say they are "strongly inclined to think there was no error on this point." In the case of *Treadwell and another vs. Salisbury Man. Co. and others*, 7 Gray, 405, it was held that where the circumstances of an existing corporation justified a sale of its entire property, its taking payment in the stock of a new corporation did not render the transaction illegal. The court said, "the new stock is taken in lieu of money, to be distributed among those stockholders who are willing to receive it, or to be converted into money by those who do not desire to retain it." In the *Cincinnati R. R. Co. vs. Clarkson*, 7 Ind., 595, it was held that the company had power to take subscriptions for stock payable in real estate, though the case does not show what were the provisions of the charter.

We are satisfied, therefore, that the authorities utterly fail to sustain the position here contended for, that this company had no power to dispose of its stock for anything except money. But that, on the contrary, they show with entire unanimity, as well by silent acquiescence, as by positive adjudication, that it had the power to dispose of it in such a manner as would accomplish the objects authorized by the charter.

It was said that taking the mortgage was an unwarrantable dealing in real estate, but this is not so. There is nothing in the transaction approaching a speculation in lands. The mortgage is taken as a mere security, and as such is only an incident to the debt. It is simply obtaining, by contract, what the company could obtain by operation of law on any ordinary stock subscription, where there was default in payment. Judgment could be recovered which would be a lien on real estate. It would be a mere means of collecting the debt, and the mortgage was nothing more. Suppose such a suit brought, could not the company settle it on the party securing the debt by mortgage? Could they not take from a willing party, by contract, what the law would give them against him if unwilling, that is a security for the debt on his real estate? We can see no reason to doubt it. And if they could do it on the settlement of a suit, there is no more objection to it in the first instance, without suit.—Aug. & A., on Corp., § 156.

But it is further said that such a contract is a fraud on the cash paying subscribers. It is a sufficient answer to say that those subscribers do not complain. If the transaction is liable to no other objection, a party to it cannot set up his own fraud to defeat his contract, when the party defrauded choses to acquiesce. Redfield on Railways 87-8 and note. But we are unable to perceive that the ocjection is valid. The directors are the agents of the stockholders, and their acts within the powers conferred, are binding on the latter. This mode of receiving payment for stock was directed by them, and, it being within the scope of their authority, it was to be deemed assented to by all. It is to be assumed that the company could negotiate the securities for their present worth, which would be equivalent to the full amount paid on successive instalments.

We are, therefore, clearly of the opinion that the company had power to make this contract, and that the securities are valid. It was not an attempt to go outside of its charter and accomplish things unauthorized, but was a means of executing the powers granted, as to which, except so far as positively restricted, the company possessed the powers of an individual.

Says Justice Nelson in *Wilmarth vs. Crawford* 10 Wend., 342: "Unless there is some express restriction, either in the charter, or some other act of the Legislature, as to the nature of the evidence of the debts due to or from them, or securities to be taken or given by them, they have in this respect the same powers that belong to individuals. Corporations, while acting within the scope of their authority under the act creating them, that is in the execution of the powers granted to, or duties imposed upon them by the charters, are to this extent and end like natural persons." And our whole conclusion is only an application to corporations of the rule familiar as between individuals, that securities may, by contract, be received in payment.

The court below erred in holding these securities invalid, and the judgment must be revesed, with costs, and the case remanded for furth er proceedings.

New York and New Haven Railroad.—Schuyler Frauds.

DECISION OF THE SUPREME COURT.

There appears to be no end to the litigation, consequent upon the fraud of Robert Schuyler in over-issuing the stock of the New York and New Haven Railroad Co. The case now comes before the courts in the shape of a suit brought by the Railroad Company in the Supreme Court of New York to cancel the stock over-issued by Schuyler and to enjoin the holders of it from setting up any claims or bringing any suits upon it. The case was on trial during the months of March, April and May last, at a special term of the New York Supreme Court, held by Justice Ingraham, who has now rendered the decision of the Court.

The gist of the decision, as understood by us, is that the stock over-issued by Schuyler, although void *as stock*, yet that those who paid money on the faith of the certificates issued by Schuyler, or upon transfers made by the officers of the company, have a right to recover damages against the company for their losses. The reasons upon which such a recovery may be sustained, as held by Justice Ingraham are, the acts of the transfer agent in issuing false certificates, and allowing false transfers, and for negligence of the company in permitting transfers of spurious stocks on the books of the Company, by their agents; permitting the books of the Company to be used for the purpose of committing fraud on others who were desirous of purchasing stock; issuing to such persons certificates of stock; informing buyers, who applied for information in regard to stock before they paid for it, that stock had been transferred on the books. It will thus be perceived that the ground of action is not the stock *per se*, but the injury resulting to the purchaser of the stock, who was led to buy through the negligence of the company; where this State of facts exists, his Honor decides, that the purchaser of the spurious stock has a remedy in damages against the company. The following is the decision:

INGRAHAM, J.—This action was brought by the plaintiffs for the purpose of ascertaining whether the stock held by the defendants, either in whole or in part, was spurious, and if so, to have the same declared void, and ordered to be cancelled; and also that the defendants should be enjoined from prosecuting any actions then pending against the company, or bringing actions to enforce the same. Such of the defendants as have answered, deny that their stock is spurious, and set up the various grounds on which they claim their stock to be valid, and in many instances have set up counter claims for damages against the company. In disposing of this case the main question arises

as to the proper rules to be adopted, in order to ascertain which stock is valid and which is spurious. On the part of the plaintiffs, it is claimed that no transfers are to be recognized but such as are entered on the books of the company; that the issue of a certificate of stock, or an assignment thereof, did not vest in any person other than the holder on the books of the company, any title to such stock, until the same was transferred on the books of the company; that all transfers made in excess of stock owned by the transferror, and all certificates for shares not held by the party named, were void; that the outstanding certificates did not prevent the transfer of the stock represented by it, and that the holder, without notice to the company, obtained no rights against the company, until such notice was given; that the company might waive the requirement of the by-law calling for the surrender of the certificate before transfer; and that the company are in no respect liable for the acts of Schuyler or his representatives, when done or made in transactions not authorized by the company. On the part of the defendants, the grounds of the defence vary according to the particular interests of the several defendants, which it is unnecessary here to recapitulate. The first inquiry is as to the effect of the over-issue by the Schuylers in their transfers prior to October, 1853. It must be remembered that there was no over-issue of capital stock at any time prior to that date, so far as related to the whole amount of stock outstanding on the books of the company. The excess was in the account of Schuylers alone. If there had been such an over-issue at that time, beyond the capital of the company, and that had not been remedied by calling in and cancelling sufficient stock to reduce the amount down to the actual capital, such false stock remaining on the books would undoubtedly effect the title of all persons to whom such shares should subsequently be transferred; but if the whole capital of the company was not at that time exceeded by such over-issues, there would be nothing to prevent the company from receiving from the Schuylers payment for such over-issued shares, or a satisfaction therefor, either by a retransfer from them to the company, or in some other manner, by which the company, could recognize such shares as valid, and treat the holders thereof as stockholders of the company. After a full review of the case the Judge considers the following facts established:—

That the company was duly incorporated by the Legislature of Connecticut in 1844. That in 1846 the Legislature of New York authorized the company to extend their road to, and unite with, the Harlem Railroad Company at Williamsbridge, and such act was assented to by the Legislature of Connecticut the same year. That in pursuance of the charter, the Board of Directors attempted to obtain subscriptions for the capital stock of the company, which attempt failed. That afterward, about October, 1846, a formal subscription was made by certain persons to the capital stock of the company, amounting to 24,400 shares, exclusive of the subsequent increase, on which a payment of one dollar per share was made. That a Board of Directors was elected on the 19th May, 1846, and the company was then duly organized. That on the same day, the Directors organized their body by electing Robert Schuyler President. That on the 10th of November, 1846, the Board resolved to make up the capital stock to 25,000 shares, and passed a resolution providing for a further subscription and distribution thereof, together with 9,680 shares placed by the former subscribers with the President of the company for distribution, and directing the same to be offered for sale and distribution on terms prescribed by them in the resolution. That various subscriptions were afterwards obtained, by which the whole of such stock was subscribed for. That such subscriptions were recognized by the company, although not obtained in the mode specified in the act of incorporation, by the resolutions passed Dec. 31, 1846. That subsequently, in August, 851, the Board of Directors agreed to increase he capital stock to 30,000 shares, and directed e same to be apportioned among the then existing stockholders, as standing on the stock ledger for the dividend payable on 15th August, 185I. That on the 15th August, 1851, a dividend was declared and paid to the stockholders on the books of the company, according to the stock ledger, which comprised all the stockholders then holding stock on the books of the company, as per exhibit No. 29, at which time R. & G. L. Schuyler were recognized as holders of 854 shares. That such distribution was accordingly made, and the 5,000 shares were so distributed and taken by such stockholders, except sixty-eight shares, which were fractions of shares, not taken by those who were entitled thereto, and which remained undisposed of. That Robert Schuyler was appointed transfer agent at New York, J. G. Sheffield at New Haven, and J. E. Thayer & Brothers at Boston, by resolutions of the Board of Directors on 3d February, 1847. That the stock so subscribed for and distributed, appears to have been, in most, if not all cases, transferred by one of the transfer agents, on behalf of the company, to the subscribers. That there were, at all times, transfers made to the transfer agents on the books of the company, for the account of the company, and the stock so transferred was afterwards disposed of by such agents. That ten shares of stock taken by George Peck were declared forfeited on 4th May, 1853, and a resolution then passed authorizing the President to sell the same, and also the 68 shares of the stock not taken in fractional shares, by the subscribers, so as to make the whole capital stock 30,000 shares. That George W. Whistler was appointed Vice-President on 10th August, 1853, and resigned 31st May, 1854. That prior to the distribution of 5,000 shares in August, 1851, the firm of R. & G. L. Schuyler, by transfer, had caused an over-issue of stock in their stock account to a large amount, and exceeding 1,000 shares above the number of shares that had been transferred to them previous to such over-issue. That it does not appear in what manner such over-issues were remedied, but that on the 17th of October, 1853, Schuyler's stock account balanced with four shares to their credit. That at all times previous thereto, the stock ledger account always balanced with the stock issued by the company, so that at no time previous thereto was there an issue by the company or its agent of more stock in the aggregate than thirty thousand shares. That at that date R. & G. L. Schuyler had outstanding certificates signed by R. Schuyler, transfer agent, for 7,042 spurious shares of stock for which no transfer had been made to them on the books of the company. That in October, 1853, R. & G. L. Schuyler commenced an over-issue of shares by transfer, and between that time and the 4th of July, 1854, there were transfers of spurious shares made by them up to that date on the transfer books of the company amounting to 17,497 shares, and certificates also outstanding in their name for shares for which no transfers existed on the books to 1,648 shares, making the whole amount of over-issued stock by transfer and by certificate 19,145 shares. That these shares and certificates are claimed by the defendants in part, and by others, as will appear by the statement hereto annexed. That the over-issue of stock was originally made in some cases by transfers, when there was no stock standing to the credit of the Schuylers, and in other cases by the issue of certificates for stock when no such stock was owned by them, accompanied with an assignment and power of attorney, authorizing a transfer, and then in most cases such stock was subsequently transferred on the books of the company by the attorney, excepting in the cases of 1,648 shares pledged by the parties to whom the certificates were issued as security and not transferred on the company. That in some cases the certificate when issued was a certificate for valid stock held by R. & G. L. Schuyler at the date of its issue; and after the same was issued that R. & G. L. Schuyler transferred on the books of the company such shares without surrendering the certificates. That the transfers were all made in books kept by the company, which were regularly numbered prior to the book being used for the purpose of transferring, and in some cases transfers were made by the Schuylers as well as others of shares which were transferred to them either on the same or a subsequent day—such transfers in some cases being for the same number of shares, and in others for amounts of different quantities, and the transfers made by them were sometimes numbered of a later number than that by which they received the stock. That the company provided rules for transferring stock, as set out in the complaint, by which rules it was provided that all transfers should be made in the books of the company, and that all certificates of stock, which should have been issued, must be surrendered prior to a transfer of such stock being allowed on the books of the company. That in most of the cases in which the defendants have appeared and answered, proof has been furnished to show that such defendants, on receiving the transfers and certificates, either paid value for the stock, if purchased, or made loans thereon, in good faith, and without knowledge of the frauds or over-issues of Schuyler, and without any grounds sufficient to cause suspicion thereof. That in the case of Kyle, it does not appear that he had paid any value to Schuyler for the stock issued to him, but it is shown that the Mechanics' Bank loaned money to Kyle upon the said certificates, and had a transfer to them of part of the stock. That in many of the cases the defendants, before paying for their stock, or advancing money thereon, made or caused to be made application to the officers or clerks in the employ of the company to know if stock had been transferred to them, and were informed that such transfers had been made, and that they then paid or advanced money, relying on such information from the agents of the company. That in all such cases the defendants have sustained damage from the acts of the officers, clerks, or agents of the plaintiffs. That Robert Schuyler failed on or about the 3d day of July, 1854, and then communicated to the Board of Directors that difficulties existed as to the stock, and referred them to the stock ledger as containing much that was wrong. That up to that time there is no evidence of any actual knowledge by any of the Directors of any fraudulent acts on the part of Schuyler in the performance of his duties as transfer agent. That such frauds were committed both as transfer agent of the company, in giving false certificates, and permitting false transfers on the books of the company, as well as a stockholder of the company as one of the firm of R. & G. L. Schuyler, in making transfers and obtaining certificates from the company for more shares than they held on the books of the company. That a proper examination of the books by the Directors would have enabled them to discover the frauds which were perpetrated by Schuyler, and that the Board of Directors were guilty of negligence in not making such examinations, and in leaving the entire charge and control of the transfer of shares, and giving certificates, with Schuyler, without making such examination. The law, as applicable to these facts, I find as follows, viz:

1. The stock of the company being limited to 30,000 shares by the charter of the company, it was not in the power of the Board of Directors, by any resolution or act of such Board, to increase the number of shares beyond that amount.

2. If the directors could not, by their own act, increase the number of shares beyond 30,000, they could not delegate to their agent, either directly or indirectly, authority to make such increase.

3. If neither the Board, nor its agents acting under its authority, could do an act by which the capital stock could be increased, no act of negligence or misconduct on the part of such agent could effect, by any liability for such acts, what the company could not do directly.

4. Consequently the doctrine of estoppel cannot be applied to give validity to what would be an illegal act, or to prevent the company from setting up, in answer to a claim to such stock, that the same is void, being issued in excess of the capital.

5. By this I mean that no one can be estopped from refusing to do an illegal act; but that an estoppel can only operate in favor of a party injure-

where there is no provision of law forbidding the party against whom the estoppel is to operate from doing the act which is sought to be carried out through its operation.

6. The doctrine of estoppel is only available to the party for whom it was designed, and does not operate in favor of a stranger to whom the representation was not made, and is not applicable to this case excepting as hereafter stated.

7. That no legal title passed to any one who received from the owner a certificate of shares of stock, issued by the company, with a transfer endorsed thereon, even though the person to whom such stock was delivered advanced money on the receipt thereof, but that the party receiving the same only acquired an equitable title, valid against the party named in the certificate to compel a transfer of such shares on the books of the company, while the same remained in his name thereon.

8. By the law, and by the statute of Connecticut passed 1849, such an assignment is not valid against any but those making it and their representatives, and such law operates upon all transfers of the stock of the company, whether in Connecticut or New York.

9. A transfer on the books of the company for value, to a *bona fide* holder, would pass to him the shares so transferred, although at the time the transferror had a certificate in his name outstanding for the same, which he did not surrender at the time of transfer.

10. The fact, that the owner had pledged the certificate to a third party, as security for money borrowed, without notice to the company thereof, would not affect such transfer, or the title of the transferree, to the stock so transferred.

11. A transfer by a person, who at the time held no shares on the books of the company, passed no title to any shares of stock in the company.

12. Such a tranfer conveys no title to stock subsequently acquired, and could not be made good by a transfer to the person making the same of subsequently acquired stock.

13. Stock received and transferred on the same day should, in equity, be considered as received before it was transferred, although the numbers of the transfer may be such as to make the transfer to him, unless it was proven that such transfer was made prior to the one by which the stock was assigned to the transferror.

14. The by-laws of the company, requiring a surrender of the certificate before making a transfer, is not binding on third persons so as to affect their rights or deprive them of their property.

15. Stock transferred under a power of attorney attached to a certificate, which power also contained an assignment of the shares, and authority to transfer the said shares, did not authorize the transfer of any shares acquired after the date of the power.

16. Such transfer could only operate to transfer stock held by the person named in the certificate, and power at the date of the power; and if such stock was previously transferred by him, no title would pass under the transfer of the attorney to any stock subsequently acquired by such person.

17. In the case of a certificate and power of attorney, held by the party to whom it was pledged without making a transfer on the books of the company, the same rule should be applied. Such certificate and power would entitle the holder to an equitable title to any valid stock held by the person named therein of the date of the power, if he continues to hold such stock to the present time; but if all the stock held by the party at the date thereof has been sold by him, then the certificate has ceased to be of any value and should be cancelled.

18. That the company having permitted R. & G. L. Schuyler to sell stock covered by certificates when there was stock standing to their credit sufficient to cover such certificates, is bound to make good such certificates to the extent of any shares owned by the company, within the capital stock of the company, and that the seventy-eight shares of the company unsold should be applied to the satisfaction of the oldest outstanding certificate of that character.

19. That the defendants who have received transfers of spurious stock by the acts of the transfer agent, or certificates of spurious stock from the transfer agent of the company, without knowledge or ground of suspicion of fraud or irregularity, and have advanced money thereon, are entitled to recover damages against the company in a proper action.

20. That defendants, who have been misled by the acts or negligence of the officers of the company, and have advanced money in consequence thereof, are entitled to recover damages against the company in a proper action.

21. That persons holding certificates of stock, valid when they were issued, accompanied by an assignment and power, on which they have advanced money, may recover damages against the company when such certificates have been rendered of no value by the allowance of transfers on the books of the company, without requiring the surrender of the certificates.

22. That such damages cannot be recovered in this action by way of counter claim.

That the following rules must be adopted, as to the separation of the stock:—

1. The certificates are to be rejected where a transfer of the stock or shares mentioned therein has been made on the books, and the certificates, with power attached, have ceased to be of value, where all the stock held by the party at the date thereof has been transferred.

2. That the transfers on the books of the company are to be held valid, even without the surrender of the certificate at the time of the transfer.

3. That transfers only convey the legal title to stock held by the party at the time of making the transfer.

4. That transfers made on the same day on which the stock is received are valid and convey the title, although the transfer to the party is entered in the transfer book, on a transfer of a prior number than that by which he received the stock, provided the date of both transfers is the same.

5. That transfers by power of attorney can only convey stock held by the party executing the power of attorney at the time of its execution, and in the absence of any other proof the date of the power must be taken as such time. If there is no date to the power and no proof of its execution, the date of the transfer by the attorney must govern.

6. If all the stock held at the date of the power has been transferred by the party giving the power, before the attorney makes the transfer, no stock would pass under such transfer, and the same is to be disregarded.

7. The same rule must be applied to outstanding certificates and powers, where no transfer has been made by the attorney, and where an equitable title exists in the holder of the same, and if all stock held by the party giving the power at the date thereof has been transferred, such power and certificate cease to be of any value, and no stock can be transferred thereby.

Here follows a list of the names of persons claiming stock, by transfers or otherwise, which is declared to be spurious, and amounts to 17,752 shares.

The following certificates of stock held by defendants, which were issued by R. Schuyler, transfer agent, in the name of R. & G. Schuyler, subsequent to October 18, 1853, and which were so issued fraudulently, there being no stock held by them at the time of giving such certificates, are declared to be void, and are ordered to be cancelled, and the holders thereof to be restrained by injunction in like manner as before directed, viz:—

Certificate No. 4,110, for one hundred and twelve shares, claimed by C. Sagory & Co., dated 10th November, 1853.

Certificate No. 4,163, for seventy-five shares, claimed by Jacob Surget, of November 40, 1853.

Certificate No. 4,448, for 100 shares, claimed by C. Sagory & Co., of 27th March, 1854.

Certificate No. 4,563, for 65 shares, claimed by Jas. G. King's Sons, of 19th April, 1854.

Certificate No. 4,936, for 20 shares, claimed by Jas. G. King's Sons, of 4th May, 1854.

Certificate No. 4,693, for 125 shares, claimed by Jas. G. King's Sons, of 16th May, 1854.

And the following certificates of stock, issued prior to October 18, 1853, for stock which was then held by R. & G. L. Schuyler, and were at the time certificates of good stock, and which were afterwards rendered of no value by the transfer of the same stock on the books of the company by R. & G. L. Schuyler, are declared to be of no value, and are ordered to be cancelled, and the holders thereof are to be restrained by injunction in like manner as before directed, viz:

Certificate No. 2,106, claimed by Carpenter & Vermilyea, for 50 shares, of the date of 2d April, 1851.

Certificate No. 2,737, claimed by Jacob Surget, for 110 shares, of the date of 18th October, 1851.

Certificate No. 3,447, claimed by Jas. G. King's Sons, for 100 shares, of the date of Oct. 7, 1852.

Certificate No. 3,534, claimed by Jacob Surget, for 110 shares, of the date of Dec. 11, 1852.

Certificate No. 3,724, claimed by C. Sagory & Co., for 160 shares, of the date of 13th May, 1853.

The following defendants, who have appeared and answered, have not been shown to be the holders of spurious stock. On the contrary, the stock held by them has been found good, according to the rules adopted by the court, and as to them judgment must be rendered in their favor, with costs:—R. H. Arkenburgh, Anna Maria Clarkson, A. B. Davis, John H. Dykers, Alfred S. Fraser, Lorenzo Hull, William H. King, John M. Knox, George M. Mead, Wm. H. Rogers, A. D. Wyckoff, Rush Tuller, J. H. Whitson, and Charles Wright.

The defendants, Duncan, Sherman & Co., having disclaimed any title to the stock standing in their name, and disclosed the name of the owner, no judgment can be rendered as to them, and the complaint as against them is dismissed, with costs.

As to the costs of the other parties, plaintiffs and defendants, no costs are awarded to either but the judgment, as far as rendered in favor of the plaintiffs, is without costs.

Journal of Railroad Law.

INCORPORATION OF COMPANIES; APPROXIMATE ESTIMATE OF LENGTH OF ROAD, MADE WITHOUT ACTUAL SURVEY, ONLY REQUIRED IN THE ARTICLES OF ASSOCIATION, BY LAWS OF NEW YORK.

The Buffalo and Pittsburg Railroad Company sued one Hatch to recover the amount of a subscription made by him to the capital stock of their corporation. Hatch put in the defence that their company was not duly incorporated, and he was consequently freed from his obligation to pay his subscription.

The case was tried in the Superior Court of the City of Buffalo without a jury. The plaintiffs produced a copy of their articles of association, and of an affidavit thereto attached, purporting to have been sworn and subscribed to on the 12th day of October, 1852; and immediately following the copy of an indorsement, or addition, by the then Deputy Secretary of State, that the paper was recorded October 13, 1852, compared and found to agree with the original articles of association, and affidavit attached. The defendant objected that the affidavit did not show that $1,000 per mile had been paid in in good faith, and that it did not state that ten per cent. upon the subscription had been paid in good faith to the directors.

A judgment was rendered in favor of the plaintiff; the defendant carried the case to the General Term of the Court, where the judgment was affirmed, and from this judgment he appealed to

the Court of Appeals, which Court again affirmed the judgment in favor of the plaintiffs. The following is the opinion.

GROVER, J.—Chapter 140, of laws of 1850, provides for the formation of companies, for constructing and operating railroads, and the incorporation of the same. Section 1st, of the act provides what the articles of association shall contain; and among other things provides that the length of the road as near as may be, shall be therein stated. The articles in this case, in addition to stating the termini of the road and the counties through or into which the same is to be constructed, state that it is about seventy-five miles long. It will be seen that the precise length is not required to be stated; but only the length as near as may be. The act contemplates the formation of the company before the route is surveyed and the length accurately known. As near an approximation to the length as may be, in the absence of a survey is all that is required by the language or intent of the act. The articles state that the capital stock of the company shall consist of $750,000, to be divided in seven thousand five hundred shares. If right in the conclusion that an estimate of the distance, as nearly accurately as practicable without a survey, is sufficient, then the articles do show that the capital stock of the company is $10,000 per mile of the road specified in the articles, and is a compliance with the statute in this respect.

The objection that the affidavit does not show that $1,000 per mile had been paid in good faith is untenable, there being no such requirement in the statute.

This objection was probably intended to raise the point that the affidavit did not show that $1,000 per mile had been in good faith subscribed and ten per cent. on the subscriptions paid. The affidavit states that $84,100 has been in good faith subscribed to the capital stock of said company. This exceeds $1,000 per mile upon the length of the road as stated in the articles. The distance stated in the articles controls for all purposes of the formation of the company, and in this case is to be regarded as seventy-five miles, that being the distance as near as could be ascertained. In an action by the corporation, evidence that the length of the road, in fact, differs from that stated in the articles is not admissible to defeat the action, whether the difference arose from fraud or mistake. The corporation is formed by filing and recording the articles of association and affidavit to the Secretary of State. In actions by or against the corporation, its corporate character is to be determined from those papers. In a proceeding instituted by the public to dissolve the corporation, an inquiry into the true length of the road for the purpose of showing fraud would be competent.

It was also insisted by the defendants' counsel that the affidavit did not state that ten per cent. upon the subscription had been paid in good faith to the directors named in the articles, or to whom it was paid. The requisites of the affidavit to be indorsed upon, or attached to, the articles are prescribed by the second section of the act. That section provides that the articles of association shall not be filed and recorded in the office of the Secretary of State until at least $1,000 of stock for every mile of railroad proposed to be made, is subscribed thereto, and ten per cent. paid thereon in good faith to the directors named in said articles of association; nor until there is endorsed thereon or annexed thereto an affidavit, made by at least three of the directors named in said articles, that the amount of stock required by this section has been in good faith subscribed and ten per cent. paid in cash thereon as aforesaid. The affidavit must show, not only that the amount of stock required has been subscribed in good faith, but also that ten per cent. has been paid thereon in good faith and in cash to the directors named in the articles. This is the plain meaning of the language used in the statute. The affidavit in this case states that $84,100 has been in good faith subscribed to the capital stock of said company, and that ten per cent. has been paid in cash on said subscriptions. The act plainly shows that none but the directors can receive payment upon the preliminary subscriptions previous to the filing of the articles with the Secretary of State. Delivering money to any other persons would not be payment upon the stock. When, therefore, the affidavit states that ten per cent. has been paid upon the subscription in cash, it necessarily implies that the money has been paid to the directors named in the articles. If it has not been so paid the affidavit is false, and perjury may be assigned upon it. It would be no defence to show that the money had been delivered to any other person than a director or an authorized agent.

The affidavit also necessarily implies that the payment has been made in good faith; that the money has been delivered by the subscribers to apply as payment upon the subscription; and that the title to the money will vest in the directors as trustees of the corporation, when the papers are filed and recorded by the Secretary of State. This is a payment in good faith, and all that is required by the statute. Anything short of such a payment will not satisfy the language of the affidavit.

There is nothing in the idea that promises of future favor may have been made to the subscribers by the directors. Such promises if made are a nullity, and would not vitiate the payment. The Legislature intended to facilitate the formation of companies designing in good faith to construct and operate railroads, and to prevent the incorporation of fraudulent companies having no capital or means to prosecute such works. With this view, the Secretary is forbidden to file and record articles unless the affidavit shows that there has been a *bona fide* subscription of $1,000 per mile, and ten per cent in cash paid in good faith to the directors. The affidavit in this case proves these facts, whether the public interest requires further restrictions is a question for the Legislature.

The third section provides that a copy of the articles of association, filed and recorded in pursuance of the act, or of the record thereof, with a copy of the affidavit indorsed thereon or annexed thereto, and certified to be a copy by the Secretary of State, or his deputy, shall be presumptive evidence of the incorporation of such company and of the facts therein stated. The certificate is evidence of the filing and recording, and of the time when these acts were done. The certificate in this case shows that the articles were filed and recorded before the commencement of the action. Whether the defendant became a subscriber for the stock before or after the filing is not material. He is liable to pay in either event. The judgment should be affirmed.

The Coinage.

There are some singular and striking facts in the recent report of the Directors of the Mint which claim consideration. The total coinage at the Mint and five Branches, from the year 1793, to 30th June, 1850, was $689,189,674 and 95 cents, viz:

Gold	$564,960,722 63
Silver	122,025,138 77
Copper	2,203,813 55
Total	$689,189,674 95

This coinage (including bars) has been effected as follows: Sixteen per cent. at Philadelphia, fifteen per cent. at San Francisco, over twelve per cent. at New York, and smaller sums at other places,

	Pieces.	Value.	Per Cent.
New Orleans	89,330,345	$67,434,411.47	9.80
Philadelphia	633,805,010	417,872,851.10	60.50
San Francisco	7,357,964	105,567,313.74	15.40
New York	27,789	87,479,238.64	12.76
Dahlonega, Ga.	1,352,464	5,991,496.00	.84
Charlotte, N. C.	1,162,364	4,854,364.00	.70
Total 66 years	733,035,936	$689,189,674.95	100.00

In twenty-one years the coinage at Dahlonega, Ga., was $5,991,496, an average of $300,000 per year; but since 1854 this has become less, and in 1857 was only $32,906; in 1858, $100,167, and in 1859, $65,582. Yet to maintain this Branch the annual expenses are over $10,000, or about twelve per cent. of coinage—an expense which would seem, under the new circumstances of the country, quite superfluous.

The same remark applies to Charlotte, N. C. The total coinage since its commencement in 1838, has been $4,844,364, or an average of about $240,000 a year; but for three years past the total was $460,000, or an aggregate of $153,000 annually. This is done at an expense to the Government of over $10,000 per year. Every dollar carried there costs the Government over ten per cent. for coinage only.

Instead of spending this $23,000 annually at two Branches, how much better would it be to transport this $200,000 of gold dust to Philadelphia, at a gross charge of say one thousand dollars, and thus save the Government about twenty-two thousand dollars annually.

Another prominent feature of the Report is the great increase in the production and coinage of silver since the California mines were discovered. Thus the total coinage of silver from the year 1793 to 1850, (fifty-seven years) was $75,581,464; while from 1850 to 1859 it was $46,443,674; a total of $122,025,138. The largest silver coinage in any one year, in the United States, up to 1849, was $3,606,100 (year 1836), and the total for ten years up to 1849 $22,223,733, or a yearly average slightly exceeding $2,200,000.

Since the year 1853 the coinage of silver has exceeded forty-one millions of dollars, of which $3,290,168 was silver of domestic production.

The production of gold in the several States, since the commencement of the coinage, has been as follows;

California	$451,310,840 26
Georgia	6,800,879 82
North Carolina	8,044,409 39
Virginia	1,525,515 50
South Carolina	1,280,604 87
Alabama	196,758 54
Tennessee	80,810 87
Oregon	69,292 00
New Mexico	48,672 00
Kansas	4,171 70
Other States	79,224 00
Total Domestic Gold	$470,341,478 46

This large sum has been coined at the following points—the first column representing the coinage

of American gold only; the other of both American and foreign gold, silver and copper.

Philadelphia	$238,305,639.48	$417,872,851.10
San Francisco...	106,641,697.73	105,567,313.74
New Orleans....	22,294,827.91	67,434,411.47
Charlotte, N. C..	4,868,525.67	4,844,364.00
Dahlonega, Ga...	5,988,635.60	5,991,495.00
Assay Office N.Y.	92,242,151.98	87,479,247.64
Total	$470,341,478.46	$689,189,674.95

It is now proposed to establish at New York a Branch Mint, with powers similar to that at Philadelphia.

Norris Engines for the Sunbury and Erie Railroad.

R. Norris & Sons, engine builders of this city, whose spacious shops and unequalled tools are the admiration of mechanical engineers, on Tuesday last forwarded two new locomotives to Sunbury, built to the order of the Sunbury and Erie Railroad Company, who on the first of July will begin to operate their road with their own motive-power. The same firm previously supplied the same Company with engines for the western division of their road.

The two engines last sent forward bore the numbers "7" and "8" and the names "Bald Eagle" and "Enterprise."

By the way, in a glance into the tabular statement of the locomotives used on the Pittsburg, Fort Wayne and Chicago Railroad, a few days ago, we observed that *thirty-two* were built in the shops of R. Norris & Sons.

The engines of this celebrated firm are to be found running upon iron tracks in all parts of the country traversed by railroads, and those turned out at recent date and with latest improvements, are among the very best locomotives to be found anywhere.—*Philad. Mining Register.*

Will the Coal Fields Hold Out?

When we look at the enormous amount of coal now annually consumed, especially when we observe the ratio in which that consumption has increased within the last third of a century, and reflect on the certainty that, at every stadium of human progress in population, arts and general culture, that increase must go on at an accelerating ratio, the question inevitably presents itself —will the coal fields hold out?

The produce of the American fields during the year 1859 has been computed at 9,000,000 of tons. The entire produce of the coal fields of the world is estimated at the same time at 100,000,000. These figures are startling enough. But when we recollect the rapidity with which they have been reached from comparatively small amounts the vista they disclose is incomparably more so.

The British coal trade has heretofore doubled itself in about twenty-four years. This, however, is a slow rate of advance compared with that which has been made in our own trade. We take the produce of the anthracite mines of Pennsylvania, as it is exhibited in the tables of Professor Rogers, as an example. In thirty-eight years, from 1820 to 1858, it advanced at the rate of 184,000 tons per annum, and from 1839 to 1849, the produce doubled itself in each five years, while it has again doubled itself in eight years.

We have seen that the American coal trade began in 1820 with 350 tons, and had reached, in 1859, 9,000,000!

And then, with the increase of health and the consequent increase of wants; with the constantly multiplying applications and uses of coal in the arts; with the opening of new mines of the various metals, all of which must be worked by the abundant consumption of coal; with the rapid exhaustion of what remains of the forests; with the progressive exploration and civilization of non-coal-producing countries, and the growing demand for closer connection and more frequent intercourse between remote nations, it is difficult to predict or conceive the extent which the use of mineral fuel may reach in the next twenty-five years.

Gradually but rapidly coal has for the last generation been establishing itself as the universal motor of the social mechanism. It warms and lights our houses, cooks our food, spins, weaves, dyes and washes our clothes, illuminates our streets, bears our letters and ourselves swiftly over land and sea, makes our paper, prints our books and journals—in a word, what does it not do for us? What movement, in the vast and complicated machinery of modern society is not dependant on coal? Should this motive force be now or at any future time withdrawn, what would be the effect on the world?—Locomotion and the transmission of letters would instantly return to the rates of fifty years ago. Our ocean and river steamers would speedily be rotting at our wharves, and our rail cars stand motionless and useless on their tracks, for all the accessible forests would speedily disappear under the immense demand. New Orleans would again be a fortnight from New York, England a month from America, and California be almost lost sight of. Here and there the dim light of an oil-fed lamp would twinkle through the streets as of old, instead of the brilliant and abundant light afforded by gas. Books and newspapers would forthwith rise to a cost entirely beyond the reach of the million. Even that primary element of home comfort, and in fact of all cultivated and pleasurable existence—warmth—would be wholly unattainable by the great mass of mankind, and before long beyond the reach of all. As for that extensive system of enlightened and benevolent effort by which the Scriptures and all the blessings of Christian civilization are in the process of rapid diffusion among distant and barbarous nations, what would become of that if the facilities of communication and of the rapid and cheap multiplication of books, which are wholly dependent on coal-fed steam, were withdrawn? Every interest of society and of humanity would undergo a disastrous revolution. The lack of coal would operate like a paralysis on all human energy.

That one hundred millions of tons have been taken annually out of the mines, with the certainty, judging from the past, that the amount will be doubled and trebled and still go on to increase as time and the world advance, is a startling fact to contemplate. Will the mines stand the immense drain? Will the coal fields hold out?

Science started this inquiry about the beginning of this century, and gave an unpropitious and alarming answer to it. Eminent geologers, however, gave some comfort to mankind by gradually postponing the period of exhaustion. Mr. Bailey predicted the supply of the Dunham and Northumberland coal fields would only last two hundred years. Dr. McNab named three hundred and seventy-five years. Dr. Buckland conceded four hundred years. Professor Thompson extended the period to one thousand years. Mr. Hugh Taylor (more liberal than previous calculators) granted seventeen hundred and twenty-seven years.

There are men now living in Philadelphia who remember the panic once created there by the announcement that the workmen had reached the bottom of the Mauch Chunk coal mine. The stock of the Lehigh Coal and Navigation Company fell twenty per cent., and gloomy presentiments filled the general mind. These apprehensions were caused by ignorance of the nature of the coal formation, which, unlike other mines, occur in strata or seams, and the hope of abundant supply lies in the extent rather than the thickness of these seams. In the great Northern or Newcastle field in England there are about fifty-seven different seams of coal. These vary in thickness from one inch to six feet, and they form an aggregate of about seventy-six feet of coal. The average thickness of the great coal fields of the world varies from ten to sixty feet. That a coal bed should be worked through in no long time was of course to be expected, and was no just ground of alarm.

These scientific predictions and popular fears about the exhaustion of coal may now be examined under the light of wider explorations, more exact surveys, and better knowledge of the structure of the coal deposits.

The following is a table of the areas and solid contents of the coal fields in the principal countries of the world as given by Professor Rogers in his admirable "Description of the Coal Fields of North America and Great Britain," annexed to the "Government Survey of the Geology of Pennsylvania":

	Square miles of coal area.	Total square miles.
United States	196,650	204,180
British Provinces of N. A.	7,530	
Great Britain	5,400	8,964
The rest of Europe	3,564	

The estimated quantities of coal in the principal countries are as follows:

	Tons.
Belgium	36,000,000,000
France	59,000,000,000
British Islands	190,000,000,000
Pennsylvania	316,400,000,000
Great Appalachian coal field, (this name is given to the bituminous coal field which extends through parts of Pennsylvania, Ohio, Kentucky, Tennessee and Virginia)	1,387,500,000,000
Indiana, Illinois & Western K'y.	1,227,500,000,000
Missouri and Arkansas Basin	739,000,000,000
All the productive coal fields of North America	4,000,000,000,000

A survey of these figures will serve to tranquillize any immediate apprehensions of a short supply of coal. It will be seen that at the present rate of consumption, 100,000,000 of tons per annum, the coal fields of Pennsylvania alone would meet the demand for 3,164 years. If the consumption were doubled, viz: 200,000,000 of tons, the Great Appalachian field would meet the strain for 6,937½ years. If it were quadrupled, viz: 400,000,000, the productive coal fields of North America would suffice for the world's supply for 10,000 years to come.

To this we must add the consideration that new coal fields are brought to light as exploration becomes more extensive and exact. Dr. Nordenskion, a learned Flemish traveler, who has just returned from a visit to the Arctic regions, announces that he discovered anthracite coal as far north as Spitzbergen. One of the most remarkable features of the coal system of the globe is its liberal distribution over the northern hemisphere, where it is most needed. And it will probably be found in the still unexplored regions of Central and Northern Asia that the same divine forethought and beneficence which provided this inestimable element of human comfort and progress on such an amazing scale of munificence for the people of our own continent have been equally mindful of those of Asia.

The Hoosaic (Mass.) Tunnel.

The distance to be cut through the mountain for the Hoosaic Tunnel is four miles and a half, and the material to be cut through is hard mica slate, intermingled with quartz. The height of the tunnel is to be eighteen feet, its width fourteen.

The work gets on slowly; the rate of advance is only two and a half feet a day. On the 31st May the workmen had reached just 1,683 feet into the mountain, from the east end. The distance made on the west side is about 800 feet. Three miles and a half of solid rock yet lie between the workmen on the east side and those on the west side! As the work is now done by blasting, (not boring,) it will require at least ten or twelve years to finish the tunnel, unless some new and more perfect machine for boring is brought to bear on the work. There are now eighty workmen engaged, night and day, working in gangs, eight hours each at a time,

The distance between the highest point of the mountain and the tunnel below, when finished, is not less than two thousand feet.

Minnesota and Pacific Railroad.

The railroad warfare has just commenced with renewed vigor and increased bitterness. Early in May last Gov. Ramsey gave public notice by advertisement, according to the law approved March 6, 1860, that on the 23d day of June, 1860, he would sell, at public auction, at the Capitol in St. Paul, the property, franchise, &c., of the Minnesota and Pacific Railroad Company.

On Wednesday last an injunction, issued from the District Court, Second Judical District, by Judge Palmer, in a suit wherein James M. Winslow is Plaintiff, and Alex. Ramsey, the Minnesota and Pacific Railroad Company, and the Trustees of said Company are defendants, was served on Gov. Ramsey by Deputy-Sheriff Miller, by which injunction Gov. Ramsey was expressly directed to refrain from selling under the notice given by him. A similar injunction was served on the Attorney General.

At the time appointed (Saturday, June 23d), Benjamin W. Brunson, as auctioneer, commenced reading the notice of sale of the Minnesota and Pacific Railroad Company at the Capitol, in presence of some forty or fifty persons there assembled. At the close of his reading George A. Nourse, counsel for James W. Winslow (plaintiff in the suit we have mentioned), stepped to the side of the auctioneer, and announced to those present the fact of the pending suit, and of the injunction served upon Gov. Ramsey, that no one might purchase without knowledge thereof. The auctioneer then offered the property for sale, upon which he also was served with an injunction at the hands of that indefatigable Deputy Sheriff Miller. Mr. Brunson hesitated a little, but being directed to "go on" by "Bluff Aleck," stated that he sold the property by order of the Governor of the State. He then called for bids. Gov. Ramsey, "in behalf of the State of Minnesota," bid $1,000. After dwelling on the bid just two minutes, the property, franchise, &c., of the Company, were declared sold for that sum to the State.—*St. Paul Pioneer and Democrat.*

Charleston and Savannah Railroad.

We learn from the Savannah *Republican* that the grading of this road was completed on the 25th ult., and that the contractors, Messrs. McDowell & Callahan, have transferred their entire force to the main trunk road.

Macon and Augusta Railroad.

The Warrenton *Clipper* says that the right of way for this road for most of the distance between Macon and the Ogeechee river has been secured at a nominal rate—the exception being through small portions of two plantations, the owners of which will probably be as liberal as have been their neighbors.

New Railroad Enterprise in Mexico.

A project is on foot for the construction of a new railroad from the city of Vera Cruz to the neighboring village of Medellin. Manuel Escandon, the wealthy capitalist, and Gov. Zamora, of Vera Cruz, are at the head of it. The first is interested in it as the beginning of his long cherished enterprise of a railroad from the Gulf coast to the capital; the latter, as a much desired work of local improvement.—*N. O. Picayune.*

Marietta and Cincinnati Railroad.

We are informed that the Ross County Court, now in session at Chillicothe, has extended the time when the creditors of the Marietta and Cincinnati Railroad are to file their claims from the first Monday in July to the first Monday in October next.—*Cin. Gaz.*

Phillipsburg and Waterford Railroad.

A meeting of the Commissioners of this road was held in Clarion, on the 15th ult., at which it was resolved to call a meeting of the citizens of Clarion, to raise a sufficient sum to survey the balance of the route. The funds are ready, and the route is believed to be practicable.—*Pittsburg Post.*

☞ *The Chicago Press* of the 28th ult., says: "We notice that Judge Dillon has granted a peremptory mandamus requiring the officers of Jones County, Iowa, to levy and collect a tax to pay the interest on their bonds. This is as it should be, and we are glad to know that Judge Dillon has added his testimony to that of other courts all over the land, against the suicidal policy sought to be pursued to some counties in trying to defraud their creditors."

Wheeling Bridge.

At a recent meeting of the directors of the Pittsburg and Steubenville Railroad Company at Wheeling, it was determined to make the necessary surveys for the contemplated railroad bridge at Wheeling. The building of this bridge was one of conditions upon which the right of way across the Pan Handel was granted to the road.

Railroad Earnings.

The receipts of the Pittsburg and Cornellsville, Railroad, for the seven months ending the 1st of June, were $44,745 45, against $31,228 10 for the corresponding seven months of the previous year.

The earnings of the Troy and Boston Railroad for the month of May foot up	$26,842 20
Same months last year	23,181 98
Increase	$3,660 22

The earnings of the Philadelphia, Wilmington and Baltimore Railroad for May, 1860 and 1859, were:

May, 1860	$98,161 31
May, 1859	90,383 50
Increase	$7,772 81

The receipts of the Grand Trunk Railway of Canada, for the week ending June 16th, 1860, were	$54,105 50
Corresponding week, 1859	37,301 16
Increase	$16,804 34
Total traffic from July 1, 1859	$2,807,285 70
Do. for same period last y..	2,188,419 22
Increase	$618,866 48

The earnings of the Watertown and Rome Rail road for May were:

EARNINGS.	1859.	1860.
From Passengers	$11,288 25	$10,056 94
" Freight	18,800 78	18,534 78
" Mails	1,296 44	2,862 06
Total	$31,385 47	$31,453 78
EXPENSES.		
Maintaining road	$5,465 62	$9,063 65
Repairs of machinery	6,334 02	2,283 07
Operating road	8,944 86	7,116 18
Overcharges refunded	11 84	14 95
Total	$20,775 84	$18,478 85
Net	10,629 63	$12,974 93

Increase, $2,345 30, or a little over 22 per cent.

The report of the Receiver of the Cincinnati, Wilmington and Zanesville Railroad to May shows as follows:

Gross earnings during May		$14,504 23
Capital expenses	$18 64	
Ordinary expenses	11,996 74	
Extraordinary expenses	1,835 95	
		13,346 33
Difference		$1,157 90
Cash receipts from all sources		$13,766 76
Disbursements		13,743 53
Difference		$23 23

Debts and liabilities contracted by the Receiver and remaining unpaid, May 31, 1860	$15,756 80
Debts and liabilities due the road, which have accrued during the present receivership	13,613 26

The receipts of the Memphis and Charleston Railroad for May, 1860, were:

Passengers	$78,536 82
Freight	34,386 00
Mail	4,597 91
Express, etc.	2,067 10
Total	$119,587 83
Expenses	69,569 34
Net receipts	$50,018 48
Total receipts, May, 1859	$89,353 57
" expenses, " "	49,191 83
Net earnings for May, 1859	40,161 74
Increased earnings for May, 1860	$9,856 74

The report of Mr. Alsop, covering the operations of the Ohio and Mississippi road, for the month of May, was as follows:

RECEIPTS.	
Balance on hand May 1st	$28,829 01
Received on account of mail for quarter ending March 31st	1,554 40
On account of passenger and freight prior to May 1st	7,506 91
On account of express prior to May 1st	2,812 50
On account of passenger and freight business during month of May	68,331 26
Of foreign roads, on charges account, net	3,064 21
From other sources	2,200 00
	$114,298 79
DISBURSEMENTS.	
Paid on account of April expenses in operating the road	$53,095 69
On account of arrearages prior to April	886 01
On account of May current expenses	4,348 08
Sunday office expenses	574 03
Interest and discount	591 76
On account of first-mortgage bonds of interest	20,265 00
Charges advanced to foreign roads	3,489 60
	$93,250 14
Balance carried to June account	21,048 65
	$114,298 79

The receipts of the Grand Trunk Railway of Canada for the week ending June 23, were	$53,091 78
Week ending June 25, 1859	39,662 78
Increase	$13,429 00
Total traffic from July 1st, 1859	$2,860,377 49
Same period last year	2,228,082 00
Increase	$632,295 49

American Railroad Journal.

Saturday, July 7, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

Chicago, Iowa and Nebraska Railroad.

At a recent meeting of the directors of this company the chief engineer made a report on the cost of the road as follows:

Cost of 82 miles completed, including rolling stock, depots, etc. $1,275,618

To complete the work:

For station houses	$2,000
Engine houses	500
Shop at Clinton	3,000
Fencing	25,000
Rolling stock	83,063
	113,573
Whole cost of completed road	$1,389,181
Original estimated cost	1,476,000
Less than estimate	$86,819

A Company has been organized to construct a road from Cedar Rapids, the western terminus of the Chicago, Iowa and Nebraska road, to the Missouri River, 240 miles, to aid building which 900,000 acres of land has been granted by the United States. The estimated cost of the road is $1,080,000, or about $17,000 per mile.

Philadelphia and Baltimore Central R. R.

At a meeting of the stockholders of this road, held at Avondale, on the 30th ult., a verbal statement of the financial condition of the company was made, and a committee appointed to receive proposals for the construction and leasing of the road, to report at an adjourned meeting of the stockholders to be held at the same place on the 7th inst. Proposals have already been made by Mr. Felton, the President of the Philadelphia, Wilmington and Baltimore Railroad, and Chandler Hall & Co., to lease and finish the road.

Dubuque and Pacific Railroad.

The following tables will show the present financial condition of the Dubuque and Pacific Railroad, and its earnings and disbursements for the month of May:

TREASURER'S OFFICE.

Absolute bonded debt	$1,393,100 00
Bonds pledged as collateral to secure $12,000 of floating debt	195,000 00
Unsecured debt	105,354 02
Capital stock paid in	890,657 50
Number of acres of land grant to be acquired	876,040 00
Total length of projected road	330 miles.
Total length of completed road	80 miles.

TRUSTEES' OFFICE.

Gross earnings for month of May, 1860	$9,115 50
Operation expenses " " " including $582 34 of previous month	5,153 18
Net earnings for month of May, 1860	3,962 32

The First Street Railroad in England.

Mr. GEO. FRANCIS TRAIN, formerly of Boston, has the honor of having constructed the first city horse railroad in England. It is in Birkenhead, opposite Liverpool, and has proved highly successful. In closing the contract for its construction, the municipal authorities not only required a lien upon the rails and "plant," but also additional surety of $15,000, to indemnify the town, should they find the road a nuisance, and be compelled to take up the rails and repair the streets.

Locomotive Performance on the Great Western Railway of Illinois.

The following table exhibits the performance of locomotives upon this road, for five months ending with May, 1860:

Total miles run	147,331
Average cost per mile for oil, waste and tallow	0.50
Average miles run to 1 pint of oil	23.24
Average cost per mile for repairs	6.45
Average cost per mile for engineer and fireman	4.17
Average cost per mile for cleaning engines	0.54
Tons of coal	1,988.75
Average miles run to ton of coal	42.67
Cords of wood	1,808.75
Average miles run to cord of wood	37.46
Average number of cars to train	10.62
Total cost	$25,223.74
Average cost per mile	17.12

The cost per mile run for fuel used by coal burning engines was 3.54 cents; by wood burners 8.0 cents; the miles run by coal burning passenger engines was 59,787, by freight coalers 25.071. The passenger coalers ran 833.29 miles per cord for firing up, and the freight coalers 359.41 miles. Total miles run by coalers 84,860, by wood engines 62,271. The coal burning passenger engine "Minerva," re-built by the Company in 1858, having 5.5 feet drivers, 13.75×22 inch cylinders, copper fire-box 4.25 by 3 ft. by 3 ft. 8 in., and an 18 in. combustion chamber, 94, 2.25 in. (inside) diameter, iron tubes 9.25 feet long, ran, from Dec. 23, 1858 to May 1st, 1860, 43,506 miles; drawing an average of three and a-half cars (pass.) per train, at 2.5 cents per mile for repairs, 54.47 miles per ton of coal, and 25.88 miles per pint of oil.

Engine "John Cook," a coal burning freight engine, built by the Rogers works in 1857, having 5 ft. drivers, cylinders 16×22, copper fire-box 4 ft. 9¾ in. by 3 ft. by 4 ft. 8 in., and an 18 inch combustion chamber, 165, 2 inch (inside) diameter iron tubes 9 ft. 5 in. long, ran, from September 14, 1857, to May 1st, 1860, 55,367 miles; averaging 23 cars per train, 15.32 miles per pint of oil, 5.16 cents per mile for repairs, and 33.31 miles per ton of coal.

The freight engine "L. A. Allen," built by the Rogers works in 1857, dimensions same as of the "Cook," ran, from October 13th, 1857, to May 1st 1860, 55,378 miles, with an average of 23 freight cars, and 17.33 miles per pint of oil, 6.12 cents per mile for repairs, and 29.85 miles per ton of coal. The grates of these engines are of cast iron, on Allen and Hudson's patent, and are the same that were in the engines when they were turned out of the shop, and are as yet but little worn. The two Rogers engines are like the twelve engines No. 97 to 108 on the Illinois Central Railway made at the Rogers Works.

Transit Railroad of Minnesota.

This road was sold at Public Auction at St. Paul, on the 23d ult., and bid in by the Governor for the State at $1,000. The Minnesota and Pacific Railroad was also disposed of at the same time and place, and for a like consideration. A brief account of the sale of the latter road is given elsewhere.

Locomotive Performance on the Illinois Central Railway for May, 1860.

Bills and accounts payable, due agents and connecting roads, unclaimed dividends, etc.		179,059 92
Excess of assets over unfunded liabilities		$87,598 91

Catawissa, Williamsport and Erie Railroad.

This road was sold on the 2d inst. at the Philadelphia Exchange, under a decree of the Supreme Court, made May 19, 1860. Mr. Samuel V. Merrick was the purchaser, on behalf of the bondholders. The road, with twelve hundred acres of coal land, and other real estate, was first sold, to satisfy the first and second mortgages. The par value of mortgages was two millions of dollars. The property was knocked off for $100,000. Five lots of chattels, consisting of rolling stock, &c., were then put up, and they were sold as follows: First lot, par $200,000, sold for $30,000. Second lot, par $100,000, sold for $10,000. Third lot, par $10,000, sold for $1,500. Fourth lot, par $5,000, sold for $500. Fifth lot, par $40,000, sold for $7,500. The par value of the mortgage bonds, under which the property was sold, was $2,355,000. The gross amount of the sale was $149,500. It will be understood that the sale was only nominal—the bondholders and the stockholders having made an arrangement by which the former should become the purchasers of the road and its chattels for the benefit of the whole.

Texas and New Orleans Railroad.

We learn from the Beaumont *Banner* that the bridge over the Neches is nearly finished, and the bridge over the Trinity is under way. The editor looks for the completion of the road from the Sabine to Houston by August next. He gives the following distances: From New Orleans to Berwick's Bay, 80 miles built; from Berwick's Bay to New Iberia, 40 miles building; from New Iberia to Orange, 118 miles under contract; from Orange to Beaumont, 22 miles building; from Beaumont to Liberty, 44 miles built; from Liberty to Houston, 39 miles building; total, 343 miles. The editor thinks that in about a year and a quarter the whole route to New Orleans will be opened. We learn that Mr. Gentry reports 50 miles of the road in Texas as completed.—*Austin (Texas) State Gazette, 16th.*

The Simplon to be Tunneled.

We read in the *New Italy*, a French journal published at Milan, the following notice of a grand enterprise: "The age is one of gigantic undertakings. The Suez canal will be completed; the tunneling of Mount Cenis is already done; that of the Simplon is about to be accomplished by the Railroad Company of Italy.—Geneva will be the head of the line, and its point of connection with the French roads. Thence it will go to Thonon, follow entirely the shore of Lake Leman, next that of the Rhone, in the Valais, as far as Brigg, passing by Martigny and Sion. After leaving Brigg, it will incline towards the South, and pass under the Simplon, when, having reached Italian soil, it will skirt Assola, the Lago Maggoire, and finally gain Arona."

Railways in India.

A valuable history of the Indian railway system has been furnished in a report to the President of the Indian Council by Mr. Juland Danvers, the Secretary of the Railway Department at the India office. It describes, amongst a vast number of other details, the progress of each company from its commencement, the nature of the guarantees accorded, the amounts of capital still to be raised, the scale of receipts and fares, and extent of traffic in each instance, the number of persons employed, European and native, and the respective rates of mortality among them. The system dates from 1845, when the East Indian and Great Indian Peninsular Companies were respectively projected, and the number of companies now in existence is eight, employed to open 4,917 miles of communication, exclusive of the navigation of the Indus from Kotree to Moultan, a further distance of 570 miles. The largest of the companies is the East Indian, which will require a capital of £19,000,000, and the smallest the Calcutta and South-eastern, with a capital of £250,000. The total capital already sanctioned to be raised under guarantee is £34,133,000, and the total estimated to be necessary for these companies is £52,430,000. Of the amount authorized £27,079,712 had been raised at the end of 1859, of which but £625,971 had been obtained in India. Out of every £1,000,000 about £555,000 is expended here for iron, other materials, &c. Among the Europeans employed the average per centage of deaths in 1859 was 2.9, while the rate of mortality in the army is reckoned, exclusive of war casualties, at 6 per cent. In this respect the experience of the Scinde Company has been the most favorable. The average number of passengers per mile on all the railways open in India was in the year 1859, 6,583, of which 48.6 was contributed by the East Indian, 41.2 by the Great Indian Peninsular, and 10.2 by the Madras. The proportion of first class was only 1.2 per cent., and of second only 6.2, the great third class total being 92.6 per cent. The aggregate receipts were £402,025, of which £157,031 was from passengers, and £244,994 from goods; and the working expenses being £187,065, there were total profits of £214,960. The cost of the lines thus opened was £4,087,000, and the guaranteed interest upon it being not more than £201,850, the Government was practically relieved from any payment for them. The goods traffic is gradually gaining on the passenger traffic, and this feature is thought likely to increase in proportion as the lines are extended. In 1856 the passenger traffic comprised 55.40 per cent. of the whole, and last year only 39 per cent.

The following statement shows, in a succinct form, when each company was incorporated, the amount of capital estimated to be required for each undertaking, the amount authorized to be raised by each on the 31st of December, the amount raised to that time, and the rate of guarantee:

Railway Company.	Date of incorporation.	Capital estimated to be required for each undertaking.	Amount authorized to be raised. By share capital.	By debentures.	Total.	Am't raised in England to 31st Dec., 1859.	Am't raised in India up to latest advices.	Rate of guarantee.
East Indian	1st August, 1849	*£19,000,000						
Main Line			£9,255,001	£2,745,000	£12,000,000	£11,616,344	£235,911	5 per cent.

* Including the Jubbulpore line.

† Including the contemplated line from Delhi to Lahore.

‡ Including proposed extensions.

Annexed is a statement of the objects of each company and the total length of line.

East Indian Railway Company.—The construction and working of lines of railway from Calcutta to Delhi, and from Allahabad to Jubbulpore; total distance, 1,338 miles. Madras Railway.—The construction and working of a railway from Madras to the Western Coast at Beypore, with branches to Bangalore and the Neilgherries; also of a line from Madras via Bellary, to join the line from Bombay; total distance, 850. Great Indian Peninsula Railway.—The construction and working of the following railways, all of which terminate at Bombay, viz: from Bombay via Callian to Jubbulpore, to meet the East Indian line from Allahabad, with branches to Mahim and Nagpore; and from Callian via Poonah and Sholapore to Moodgul in the Deccan, to meet the line via Bellary from Madras; total distance, 1,266 miles. Bombay, Baroda and Central India Railway.—The construction and working of a line of railway from Bombay via Surat and Baroda to Ahmedabad; total distance, 310 miles. Scinde Railway Company.—Scinde Railway—the construction and working of a line of railway in Scinde, from Kurrachee to the river Indus at Kotree, total distance 114 miles; Punjab Railway—the construction and working of lines of railway in the Punjab, from Moultan and Lahore to Umritser, and thence to Delhi, total distance 490 miles; and Indus Steam Flotilla—the navigation of the Indus by means of steam vessels between Kotree and Moultan, to be worked in connexion with the railways. Eastern Bengal Railway Company.—The construction and working of a line of railway from Calcutta to Kooshtee on the Ganges, with extensions to Serajgunge and Dacca; total distance about 220 miles. Calcutta and South-eastern Railway.—The construction and working of a line of railway from Calcutta to the port of Mutlah, total distance, 29 miles. Great Southern of India Railway.—The construction and working of a railway from Negapatam to Trichinopoly, with branches to Salem and Tuticorin; total distance, 300 miles.—*London Railway Times.*

LEMUEL W. SERRELL,

SOLICITOR OF

AMERICAN & FOREIGN PATENTS,

No. 121 NASSAU ST., NEW YORK.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.,
New York, June 22, 1860.

AT A MEETING OF THE BOARD OF DIRECTORS of the ILLINOIS CENTRAL RAILROAD COMPANY, held THIS DAY, it was

Resolved, That an assessment of Five Dollars per share upon the Capital Stock of the Company, for the purpose of discharging the outstanding Free Land Bonds be, and the same is hereby called, payable on the 20th day of July, 1860; and that the same be payable on the stock registered in the City of New York, at the office of the Company in that city, and on the stock registered in London, at the office of Messrs. Robert Benson & Co.; and that parties desiring to pay their instalments in London, may pay the same at the rate of four shillings two pence to the dollar; and that the Free Land Bonds, with accrued interest, shall be received at par in settlement of the call.

Resolved, That the transfer books be closed on the 14th day of July, and re-opened on the 20th; and that no transfers be permitted on, or after that date, of shares upon which such assessments shall not have been paid. By order of the Board.

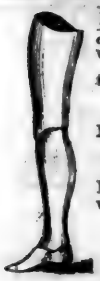
3t26 A. E. BURNSIDE, Treasurer.

$500,000 EIGHT PER CENT. LAND GRANT MORTGAGE BONDS OF THE TEXAS AND NEW ORLEANS RAILROAD COMPANY (Texas Division), secured by a mortgage upon one hundred and six (106) miles of railroad and its appurtenances, of the estimated cost of $2,920,000, and upon seven hundred and sixty-eight thousand (768,000) acres of valuable land, are now offered to the public as one of the most desirable and reliable securities at present upon the market.

THIS ROAD

is the Texas Division of the great trunk line which, within twelve to eighteen months, will connect Houston, Galveston and every important point in Texas, with New Orleans, and, in communication with the lines running North and already completed, place New York within 90 hours of Houston.

THE BONDS



will be redeemable on 1st November, 1878, bear 8 per cent. interest; coupons payable semi-annually, on 1st May and 1st November, in the City of New York.

As additional security for prompt payment of the coupons, pending the completion of the entire road, are mortgaged by special trust-deed, 76,800 acres of land, together with town lots and individually donated lands, at present valued at $600,000.

Maps, prospectuses, copies of charter, trust deeds, land grants, and every information, may be had upon application to C. CONGREVE & SON,
No. 6 Pine st.; or
E. WHITEHOUSE, SON, & MORRISON,
1m24 No. 38 William st., Merchants' Exchange.

ENGINEERING WORKS.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.				SHEET No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft. Slop.		1½ to 1
2.	For Side Hill Cuts and Fills.			14.	"	20 "	1½ to 1
3.	Base 12 ft. Slopes		1½ to 1	15.	"	24 "	1½ to 1
4.	" 14	"	1½ to 1	16.	"	24 "	1½ to 1
5.	" 15	"	1 to 1	17.	"	25 "	1½ to 1
6.	" 15	"	1 to 1	18.	"	26 "	1½ to 1
7.	" 15	"	1½ to 1	19.	"	28 "	1 to 1
8.	" 16	"	1 to 1	20.	"	30 "	1 to 1
9	" 16	"	1 to 1	21.	"	30 "	1½ to 1
10.	" 18	"	1 to 1	22.	"	30 "	1½ to 1
11.	" 18	"	1 to 1	23.	"	32 "	1 to 1
12.	" 18	"	1 to 1	24.	"	32 "	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail**, in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail**, upon receipt of the price. For sale at this office. Price **$1.**

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright as new,** thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.
TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the

EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.
THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.
THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,
JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE. Secretary, 99 Wall st., N. Y.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 49 Pine st., New York City.
E. M. BRIGHAM, Sec'y.

HUDSON RIVER CEMENT COMPANY.
THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

Light Locomotives for Local Passenger Trains.

The Cleveland and Erie Railroad Company, have now in use upon their road a new style of light locomotive for light trains. It was built by Messrs. DANFORTH, COOKE & Co., of Paterson, N. J. The Cincinnati *Commercial* says:—"It is a neat little affair having the engine and tender on the same frame. The record of this locomotive, the Reindeer, for May, is undoubtedly unequalled for economy by that of any other engine doing the same service anywhere. During the month it ran 3,756 miles with only 25½ cords of wood and 4 gallons of oil. A close calculation shows that it ran 104 miles to a pint of oil. The total expense of oil, waste and fuel per mile ran was only 1 79-100 cents. The Reindeer weighs 15 tons when supplied with wood and water for the trip. The train usually consists of one passenger and one baggage car, but she will take three loaded cars without increasing the expense or diminishing the speed. Her daily time is 68 miles each way, which is done in 3 hours, or 22⅔ miles per hour, including twelve stops in the three hours. The June record will, it is thought, be even more favorable than that of May."

Eastern Railroad.

We have received the 25th annual report of this company for the fiscal year ending May 31, from which we learn that the receipts during that time were:

From passengers		$516,870 45
" freight, etc.		182,282 09
		$699,152 54
The expenses were		344,237 55
Net earnings		$354,914 99
From which deduct:		
For rent of Grand Junction Railroad	$11,000 00	
Interest	114,271 06	
		125,271 06
Net receipts		$229,643 93

—being a gain over the previous year of $34,268.-80; equal to one per cent. on the capital of both the Massachusetts and New Hampshire portions of the road. This gain is attributed to increased business, diminished expenses for fuel, owing to the use of coal, (although an increased number of miles were run by trains,) and from the constant reduction of the interest account.

During the year large expenditures have been made upon the road, the Directors believing that true economy consists in diminishing the wear and tear of running machinery as much as possible. The equipment has also been kept in good order. Several of the bridges have been thoroughly repaired, and are now absolutely safe for the passage of trains. The balance of floating debt has been cancelled during the year, amounting to $99,301.14; and income bonds redeemed to the amount of $75,000—making the total reduction of indebtedness, $174,301.14. In reference to the present and prospective financial condition of the company, the report says:

Under a vote of the stockholders, at their annual meeting in July, 1857, it is made the duty of the Directors, after the payment of the floating debt, to provide $75,000 out of the earnings and other revenue of the company, to pay that amount of funded debt due each year, and then to declare dividends to the stockholders from the remaining balance of net income. Our floating debt is now fully paid; all bills for daily working expenses, up to 31st May, the time of making up the year's accounts, so far as they could be got in, have been paid; and the corporation has been placed in a condition of freedom from the embarrassment of floating liabilities, such as it has not experienced for many years. In addition, we have on hand in available cash assets, from the current earnings of the year, the sum of $54,980.93. There seems to be no reason to doubt, therefore, that the stockholders may look with confidence for a dividend in January next, with the expectation of regular dividends thereafterwards.

We have, in addition, notes, not immediately available, but well secured by mortgage, chiefly on lands in East Boston, to the amount of $31,-128.59; and also, on hand and paid for, the usual supply of stock in the repair shops, fuel and materials for the use of the road.

Negotiations have been entered into for the renewal of the bonds due in 1862, amounting to $710,000, which were issued in lieu of stock during the construction of the new route into Boston, and an arrangement has been made on satisfactory terms, by which the principal holders of those bonds have agreed to exchange them for similar bonds at 6 per cent., payable 1872, and authority will accordingly be asked of the stockholders to carry out that arrangement.

By reference to the report of the Directors for July, 1856, it appears that the equipment of cars and engines stood on the books at their original cost, $456,523.86, whereas the value of the equipment then was but $312,219, showing that there had been a depreciation of $144,304.86, which that report stated ought to be charged off to profit and loss. Other deficiencies, chargeable to that account, for losses by Tuckerman, for Grand Junction bonds and stock, for branches, &c., have been such hitherto that no favorable opportunity presented itself for charging off that depreciation. In the meanwhile our equipment has been kept up and improved so that the amount of depreciation below the original cost, instead of being $144,304.-86, as shown by the report of 1856, is now but $141,358.86, and that sum, in order that our books may exhibit a correct state of our affairs, has now been charged to that account.

The suit brought by certain persons in Portsmouth for back rent or dividends claimed to be due to the Eastern Railroad in New Hampshire, now awaits a decision in the New Hampshire courts, on the question of the right of these individual volunteers to maintain a suit against this corporation. Of the general business of the road, the report says:

The business on our several branches continues about the same as heretofore, with some improvements, on the whole; and applying to them, as

well as to the main line, the policy of encouraging, developing and attracting business, whenever it pays, and cutting off unproductive freight and passengers, dead heads and hangers-on of various name, so far as practicable, we may reasonably hope for remunerative returns from all parts of the road.

The experiment of burning coal in our engines continues successful, as the reduction in our fuel acount, on largely increased service, makes evident. We have now thirteen engines running with coal, and are converting the remainder into coal-burners as fast as they come in for repairs.

During the year we have transported one million three hundred passengers, without any injury to any one.

The equipment of the road consists of 26 locomotives; 47 passenger cars, 13 baggage cars, and 416 freight cars.

The financial condition of the company at the close of the fiscal year was as follows:

LIABILITIES.

Capital stock	$2,853,400
Bonds due 1862	710,000
" 1874	445,500
Income bonds due 1860-'4	375,000
Mass. State bonds due 1865-'7	500,000
Profit and Loss, accrued interest, etc.	144,681
	$5,028,581

ASSETS.

Cost of Main Line	$3,125,125
do. Marblehead Branch	55,843

Cash	6,388
	$5,028,581

The officers of the company are:

President, GEORGE M. BROWNE.

Directors, Geo. M. Browne, Samuel Hooper, Franklin Haven, Boston; Micajah Lunt, Newburyport; Nathan D. Chase, Lynn; Wm. L. Dwight, Portsmouth; Henry L. Williams, Salem.

Treasurer, J. B. PARKER.

Superintendent, J. PRESCOTT.

The Cincinnati Iron Aqueduct on the Ohio Canal.

OFFICE OF THE BOARD OF PUBLIC WORKS,
COLUMBUS, O., June 22, 1860.

Messrs. EDITORS:—At the request of Gen. Moseley, I address you upon the subject of an iron aqueduct I have had constructed upon his patent, twenty miles south of Cleveland, on the Ohio canal, during the past winter.

The span between abutments is forty feet.

The trunk is twenty-one feet wide inside, and four feet three inches in height, with a towing path bridge five feet wide inside of tow-path arch.

The arches of this aqueduct are now sustaining one hundred and forty tons, and are capable of sustaining four hundred tons more were it necessarily required.

The aqueduct has now been filled two weeks, and has not varied in line since the water was placed on the trunk.

I estimate the expense, per annum, of renewing the timbers and plank, at fifty cent per lineal foot. I regard the structure as a perfect success, and owing to its durability, safety and economy, must necessarily supersede all other plans of aqueducts now in use upon the line of our Ohio canals.

ABNER L. BACKUS,
President Board of Public Works,

La Crosse and Milwaukee Railroad.

The Receiver of this road, Mr. H. Crocker, has published an exhibit of its condition, from which we make the following extracts:

EASTERN DIVISION.—This section of the road extending from Milwaukee to Portage City, 95 miles, is subject to the following liabilities, viz:

Funded Debt.—Consisting of First Mortgage, Mortgage to the City of Milwaukee, and the Second Mortgage, so called, amounting in the aggregate to $2,264,000, and subject to an annual charge of $189,980 for interest and sinking fund for the redemption of $500,000 of the First mortgage bonds.

Real Estate Incumbrances.—Upon the depot grounds and buildings at Milwaukee there are outstanding mortgages and mechanical liens amounting in the aggregate to $34,300.

Right of Way.—Thirteen miles unsettled for, and remaining to be acquired; estimated cost, $15,000.

Fencing.—Thirty-five miles remain to be fenced at an estimated cost of $23,000.

Buildings Needed.—A brick blacksmith shop at Milwaukee and fixtures, estimated cost $3,000.

Due on Rolling Stock.—In August, 1860, Mr. Chamberlain, while in possession of the road, purchased 18 house freight and other cars, giving his note therefor, secured by a chattel mortgage upon the cars purchased. There remains to be paid on this purchase three notes amounting to $9,547.-91, which severally mature August 18, November 18, 1860, and February 18, 1861.

Taxes.—In addition to other liens upon depot grounds, many of the lots in Milwaukee are subject to tax titles. The amount necessary to settle these claims is uncertain.

The amount of these incumbrances and claims upon the income of this section of the road, now due and to become due before the 1st of January, 1861, may be summed up as follows:

The interest and sinking fund now in arrears amounts to $151,980, and payable in the following order, viz:

1st. Sinking fund on 1st mort'ge, Nov. 1st, 1859	$12,000
2d. Interest on 1st mort., due May 1, 1860.	38,000
3d. Interest on City of Milwaukee bonds, Sept. 1, 1859	10,990
4th. Interest on same, March 1st, 1860	10,990
5th. Interest on 2d mortgage, due Sept. 1, 1859	40,000
6th. Interest on same, due March 1, 1860.	40,000
	151,980

(It is probable that the sinking fund may be allowed to remain unpaid until the city interest is paid.)

Interest due Sept. 1, 1860	$50,990	
Interest due Nov. 1, 1860	38,000	
Sinking Fund	12,000	
		100,990
Incumbrances on Real Estate now due	$26,000	
Right of Way as estimated	15,000	
Fencing	23,000	
Am't due on Chamberlain's notes, payable this year	6,200	
Blacksmith shop	3,000	
		73,200
Total, beside tax liens and charges		$326,170

WESTERN DIVISION.—Extending from Portage City to La Crosse, 105 miles. It is operated in connection with the Eastern Division as one road, and is subject to the following charges and incumbrances, viz:

Funded Debt.—Consisting of First and Second mortgages, amounting in the aggregate to $4,-367,500, with an annual interest of $309,400, of which there is now in arrear the sum of $630,500.

Real Estate and Depot Grounds.—At La Crosse the depot grounds and buildings stand in the name of Selah Chamberlain, and mechanics' liens exist upon depot buildings at other stations on the line of this division of the road. To acquire title to the grounds and buildings at La Crosse, and to extinguish the other liens will require $17,000.

Right of Way.—Twenty-two miles of right of way yet to be secured on this Division, will require from $15,000 to $25,000.

Fencing.—No fencing has yet been done on this Division. It is estimated that the entire line from Portage City to La Crosse will cost $67.200.

The incumbrances and liabilities on this Division due and to become due up to Jan. 1, 1861, are as follows:

Interest in arrear		$630,500
Interest due Aug. 1, 1860, on 1st mortg.		140,000
Interest due Oct. 1, 1860, 2d mortgage		14,700
		$785,200
Right of way estimated, say	$20,000	
Depot grounds and buildings	17,000	
Fencing 105 miles	67,200	
		104,200
Total		$889,400

Looking to the future operations of the road as a complete connected line, it is proper to state, that in addition to the foregoing claims and liabilities, it is necessary that additional rolling stock should be procured without delay—the present equipment being inadequate to the business of the road. It now consists of 23 locomotives; 222 house freight cars; 17 first class and 2 second class passenger cars, and 108 platform cars. Should the grain crop of Wisconsin and Minnesota prove as abundant as it now promises, the tonnage to be moved by this road will be materially increased over that of the past year, and with the present equipment, it will be impossible to do the business which naturally belongs to the road. Those best acquainted with the prospective wants of the road, estimate that a proper equipment of rolling stock for the prompt and economical transportation of freight and passengers, will require 10 locomotives and 200 house freight cars, in addition to those now in use on the road. Mr. Goodrich, the Superintendent, while freely concurring in the above estimate, thinks that for the present year, three additional locomotives and fifty freight cars will enable the road to perform the service required.

The estimated cost of this additional equipment is $54,000.

The gross receipts from July 1, 1859, to Jan. 1, 1860, were $422,677.86. For the corresponding months of the present year they are estimated at $487,677.86, and should the hopes now entertained of the incoming crop be realized, I have no doubt of an increase in gross earnings during the present year, by the addition of the equipments suggested, equal to the cost of the same.

It will be seen that the claims, liabilities, and expenditures estimated for the Eastern Division, exclusive of rolling stock, arrears of interest, and the amount to become due for cars purchased by Mr. Chamberlain, which should be considered as the common property of both Divisions, amount to $67,000.

The necessary outlays for the Western Division, exclusive of rolling stock and claims for interest, amount to $104,200. The net earnings of the whole road for the remainder of the year, will probably not exceed $250,000, and the portion applicable to the Western Division will not exceed $60,000, if the claim made by the bondholders of the Eastern Division to the exclusive right to the rolling stock is well founded.

The two Divisions are operated as one road; but a detailed account is kept of the business properly belonging to each Division, though no distribution of net earning can be made until the question of the ownership of the rolling stock is first determined.

I have deemed it my duty to submit the foregoing exhibit, in order that the bondholders, and others interested, may know the present condition of the road. I have not deemed it necessary to refer to the claims of Mr. Chamberlain, or other creditors, but have confined myself to that class of indebtedness secured by mortgage and mechanics'

liens, and to such obligations as the laws referred to, compel the managers of the road to regard.

I am clearly of opinion that true policy requires that the bondholders should forego the payment of any interest until all the claims and liabilities are paid, and the road fully completed and equipped.

The embarrassments attending my position as the Receiver of a road, which, during my official term, will not probably earn sufficient to enable me to pay the interest on the funded debt, and discharge the claims and liabilities above set forth, lead me to suggest to the bondholders and others the necessity of adjusting all matters in controversy between all parties interested in the road, in order that it may, at the earliest possible day, pass into the hands of the proper owners.

Proceedings have been commenced to foreclose the Second mortgage on the Eastern Division, and the First and Second mortgages on the Western Division. Creditors and parties claiming an interest in the road, are resisting these foreclosures. The holders of bonds, under the Second mortgage on the Western Division, are questioning the validity of a portion of the bonds issued under the First mortgage of that Division, and a similar question has arisen among the holders of that issue. The determining of these questions by the Court will occupy a long time, and involve much expense. In the meanwhile, the interests of the road will suffer from the inability of the Receiver to meet all the liabilities and obligations devolving upon the road. I repeat, again, that the interest of the road requires an early settleme of these questions and conflicting rights—a re-organization under the laws of the State, and the formation of a company recognizing the rights of all, according to their respective priorities and equities, which will be enabled successfully to manage this great thoroughfare as one entire line, from Milwaukee to La Crosse.

It is proper to say that I have submitted the foregoing exhibit to the Judge of the U. S. Court, and have asked such order and direction as will enable me to protect the property, and promote the interests of the road.

Trevorton Coal and Railroad Company.

The following is the scheme for the re-organization of this company, under the act of the Pennsylvania Legislature of March 28, 1860. The Company is in default upon its bonded debt. The scheme is as follows:

Basis of the re-organization of the Trevorton Coal and Railroad Company under the Act passed by the Legislature of the State of Pennsylvania, on the 28th of March, 1860. Capital stock to be $1,100,000, $100,000 of which shall be a preferred seven per cent. stock—the same to be divided among the bondholders purchasing the franchise and property to the extent necessary to make good the amount of Bonds, at par, of the Trevorton Coal and Railroad Company, now held by them—the remaining $1,000,000 of capital stock to be distributed pro-rata to the order of the stockholders of the old company, payable 20 per cent. in cash, and 80 per cent. in old stock.

Should any stockholder fail to avail himself of this, then the bondholders of the new company shall have the option of subscribing to the stock and paying for the same 20 per cent. in cash.

Mortgage Bonds A to be issued to the extent of $750,000 secured by a first mortgage upon the coal lands and wood lands, other than those specified hereafter, and a second mortgage upon the railway and other property mortgaged under Bonds B, bearing interest at seven per cent., convertible and redeemable in 20 years, to be distributed among the bondholders pro-rata.

Mortgage Bonds B to be issued to the extent of $150,000, secured by a first mortgage upon the railway, bridges, basin, rolling stock and personal property, and second mortgage upon the coal and other lands of the company, bearing 8 per cent. interest, redeemable in ten years—the same to be used in making up any deficit in the amount to be supplied by the sale of the capital stock and furnishing working capital. Stockholders, taking their quota of stock, to have the privilege of taking a pro-rata amount of bonds B.

If the stock is all subscribed, then the above described bonds B shall be given pro rata to the mortgage bondholders, or such proportion thereof as may not be required for the purposes above stated, in lieu of the preferred stock.

Bondholders to deposit in the hands of trustees the first four coupons on the mortgage bonds to be held by them to prevent any foreclosure on the bonds during the first two years—but said trustees to receive and pay over pro rata to bondholders such portion of the net earnings of the company as may be requisite to pay them in full.

If said earnings are not sufficient, then the unpaid portion of said coupons are to remain unpaid until the expiration of two years.

The lots and lands at Port Trevorton, and about 3,500 acres of lands other than coal lands, are not to be mortgaged, but left unincumbered, and placed in trust for sale as opportunity offers, the proceeds of same to be applied first to pay any deficit in the earnings for interest coupons, and next to Sinking Fund No. 1.

A Sinking Fund No. 1, of 10 per cent. on amount of the Bonds B, after the lapse of two years, to be created and applied annually to the extinguishment of the same.

A Sinking Fund of 5 per cent on account of the Bonds A, after the lapse of two years, to be created and applied to the extinguishment of the same.

The Sinking Funds to be invested in the Bonds of the company, according to their separate trusts, at or below par. Stock to be issued to the shareholders pro-rata for an equal amount at par, the object being eventually put the stockholders in full possession of the property, free from the two mortgages.

An arrangement to be entered into with the Trevorton Coal and Railroad Company, and the holders of the rolling stock, &c., by which the Trevorton Coal and Railroad Company assumes all the floating debt of the old company, and the payment of the unpaid coupons, they receiving all the assets, stock, tolls, &c., of said Trevorton Coal and Railroad Company.

Bombay, Baroda and Central India R. R.

The following passages from the half yearly report of the directors of this company are from the London *Railway Times*:

The directors have the satisfaction of announcing the opening of the first portion of the line, 29 miles, between the Taptee and Nerbudda, from Amrolee to Unkleseer. Trains were running regularly up to the last dates from India. The progress reports to 29th February last, in respect of the works on the section between Surat and Ahmedabad, 143 miles, stated that the whole of the earthwork was executed, and also the whole of the brickwork and masonry. 35½ per cent. of the ballast was spread of the line, 72¾ per cent. of the fencing completed, and 48¾ per cent. of the permanent way laid. With regard to the works on the section between Surat and Veturnee, 117 miles, the quantity of earthwork executed 71.2 per cent. of brickwork and masonry 22.1, of fencing 49.75 per cent., and of permanent way 6.75 per cent.

The latest advices from India gave a most satisfactory report of progress in the erection of the large iron bridge across the Taptee. This bridge would consist of 32 spans of 60 feet, for which both the piers of cast iron and superstructure of wrought iron had been supplied from England. The erection commenced last November, and on 7th April nearly the whole of the perpendicular piles forming the piers had been screwed into their places. It was expected that the few that were not so would be completed within a week from that date. The fixing of the strut piles and superstructures are likewise proceeding rapidly; and, according to these advices, there was no doubt that this bridge, 2,000 long, across a tidal river, would be completed either before or during the coming monsoon—that was, within a period of about six or seven months from its commencement. The bridge over the Nerbudda, of a similar nature, would be more than 3,800 feet in length, composed of 60 spans of 60 feet each. The difficulties to contend with here were greater than in the case of the Taptee; one of the most formidable—the strength of the tidal current—had already twice impeded operations by injuring the staging. Of the 59 pile piers for this bridge, 17 had been erected on the north side, reaching the deepest water of the river, and several others were in course of erection on the south bed above low water mark. It had been found necessary in some instances to screw these piles to a depth of 40 feet,—the more usual depth being about 18 feet. All the minor iron bridges over 54 miles between the Nerbudda and the Mhye were in an advanced state, and were expected to be completed before the monsoon, as well as those on the first 30 miles south from Surat. The permanent way was laid from Nerbudda to near Etola, within 12 miles of Baroda, and was passable for an engine. This company's officers were in possession of the land for the line from Ahmedabad to Mahim, about 300 miles. The short distance (9¾ miles) from Mahim to the terminus in Bombay is the only portion which now remained to be decided. This included the purchase of the Mahim branch from the Great Indian Peninsula. The directors propose to raise a further sum of 250,000*l*, by debentures convertible into shares at one month's notice after the expiration of 12 months from the date of their issue. An offer had been made officially through the Bombay Government by the Guicowar of Baroda, to give to this company the construction of a line through his territory from the vicinity of Etola to the towns of Dubhoee and Bahadurpore, in the direction of the line now being surveyed by the company towards Indore. His Highness offered the land free, and the usual 5 per cent. guarantee. The proposed line will be about 25 miles in length, through a rich, populus, level country, producing cotton largely, and free from all impediments to construction. It will constitute a valuable feeder to the main line. Over 79,700 tons of materials, in weight and measurement, had been shipped to Bombay up to the 30th ult., and the shipment of the remainder of the materials was actively proceeding. (The capital account showed that 1,871,526*l*. had been received, and 1,595,709*l*. expended, leaving a balance of 275,817*l*.)
